Developments in Surface Contamination and Cleaning Rajiv Kohli, Kashmiri L. Mittal, 2008-01-10 Surface contamination is of cardinal importance in a host of technologies and industries ranging from microelectronics to optics to automotive to biomedical Thus the need to understand the causes of surface contamination and their removal is very patent Generally speaking there are two broad categories of surface contaminants film type and particulates In the world of shrinking dimensions such as the ever decreasing size of microelectronic devices there is an intensified need to understand the behavior of nanoscale particles and to devise ways to remove them to an acceptable level Particles which were functionally innocuous a few years ago are killer defects today with serious implications for yield and reliability of the components This book addresses the sources detection characterization and removal of both kinds of contaminants as well as ways to prevent surfaces from being contaminated A number of techniques to monitor the level of cleanliness are also discussed Special emphasis is placed on the behaviour of nanoscale particles The book is amply referenced and profusely illustrated Excellent reference for a host of technologies and industries ranging from microelectronics to optics to automotive to biomedical A single source document addressing everything from the sources of contamination to their removal and prevention Amply referenced and profusely illustrated

Surface Contamination and Cleaning Kash L. Mittal, 2003-03-01 This volume documents the proceedings of the International Symposium on Surface Contamination and Cleaning held in Newark New Jersey May 23 25 2001 Because of the importance of this topic in many technological areas tremendous efforts have been devoted to devise novel and more efficient ways to monitor analyse and characterize contamination

Failure Modes and Mechanisms in Electronic Packages P. Singh, Puligandla Viswanadham, 2012-12-06 Those of us who grew up in the through hole age of electronic packaging are probably more amazed and appreciative than are our children at the incredible growth of electronic performance capability My son an electrical engineering student

seems almost to take for granted the innovations that leave me somewhat awestruck at times Electronic circuit designers delight in packing more punch into less volume while reminding us that their job has become increasingly challenging The lay person also has learned from the media that the industry has been working wonders in shrinking the transistor and expanding the power of the chip Much attention is focussed on the silicon and on the marvelous production and entertainment tools we now see in our offices and homes Between the silicon and the end product lies the less publicized world of circuit level packaging We leave it to a cadre of technologists to take the schematics and parts lists and to develop the processes that turn the designers concepts into physical reality And while the silicon transistor is shrinking the engineering challenges of packaging multiple chips and associated components into increasingly dense subsystems are growing Further the transistor may have to function without failure through severe industrial or military environments over the lifetime of the product

Handbook for Critical Cleaning: Applications, processes, and controls Barbara Kanegsberg, Ed Kanegsberg, Edward Kanegsberg, 2011 Nearly all companies which manufacture or fabricate high value physical objects components parts assemblies perform critical cleaning at one or more stages These range from the giants of the semiconductor aerospace and biomedical world to a host of small to medium to large companies producing a dizzying array of components

Developments in Surface Contamination and Cleaning, Volume 3 Rajiv Kohli, Kashmiri L. Mittal, 2011-03-25 The contributions in this volume cover methods for removal of particle contaminants on surfaces Several of these methods are well established and have been employed in industrial applications for a long time However the ever higher demand for removal of smaller particles on newer substrate materials is driving continuous development of the established cleaning methods and alternative innovative methods for particle removal This book provides information on the latest developments in this topic area Comprehensive coverage of innovations in surface contamination and cleaning Written by established experts in the contamination and cleaning field Each chapter is a comprehensive review of the state of the art Case studies included

Cleaning Printed Wiring Assemblies in Today's Environment L. Hymes, 2012-12-06 The impetus to create this book originated from several concerns One of these was the perceived value to the industry of a collection in one volume of a wide range of information pertinent to the reasons and techniques for de fluxing printed wiring assemblies PWAs This book is expected to be of use not only to those engaged in the electronics packaging industry but also to those in related fields seeking information concerning viable methods of dealing with one of the environmental issues of our time the destruction of the ozone layer surrounding and protecting the planet with which we have been entrusted The volume of information relative to providing PWAs free of residues adversely impacting operation reliability and life of electronic products is growing and it will continue to expand at an accelerated rate as we seek to match our technology needs and desires with our environmental responsibilities At the time of this writing which has spanned the latter portion of 1989 and early 1990 the issue of choosing a new approach to

producing PW As free of detrimental residues while using environmentally acceptable manufacturing techniques appeared to be the major concern of the vast majority of those involved in the printed wiring assembly industry To many this meant the use of different cleaning media and or process or equipment enhancements to others it meant the elimination of the need to clean through materials or process changes

Cleaning and Contamination of Electronics Components and Assemblies B. N. Ellis,1986

Materials and Processes Barrie D. Dunn,2015-12-29 The objective of this book is to assist scientists and engineers select the ideal material or manufacturing process for particular applications these could cover a wide range of fields from light weight structures to electronic hardware The book will help in problem solving as it also presents more than 100 case studies and failure investigations from the space sector that can by analogy be applied to other industries Difficult to find material data is included for reference The sciences of metallic primarily and organic materials presented throughout the book demonstrate how they can be applied as an integral part of spacecraft product assurance schemes which involve quality material and processes evaluations and the selection of mechanical and

component parts In this successor edition which has been revised and updated engineering problems associated with critical spacecraft hardware and the space environment are highlighted by over 500 illustrations including micrographs and fractographs Space hardware captured by astronauts and returned to Earth from long durations in space are examined Information detailed in the Handbook is applicable to general terrestrial applications including consumer electronics as well as high reliability systems associated with aeronautics medical equipment and ground transportation This Handbook is also directed to those involved in maximizing the reliability of new materials and processes for space technology and space engineering It will be invaluable to engineers concerned with the construction of advanced structures or mechanical and electronic sub systems

Surface Contamination K. L. Mittal, 2012-12-06 The present volume and its companion Volume 2 document the proceedings of the Symposium on Surface Contamination Its Genesis Detection and Control held in Washington D C September 10 13 1978 This Symposium was a part of the 4th International Symposium on Contamination Control held under the auspices of the International Committee of Contamination Control Societies and the Institute of Environmental Sciences U S A was the official host The ubiquitous nature of surface contamination causes concern to everyone dealing with surfaces and the world of surfaces is wide and open ended The technological areas where surface cleaning is of cardinal importance are too many and very diversified To people working in areas such as adhesion composites adsorption friction lubrication soldering device fabrication printed circuit boards etc surface contamination has always been a bete noire In short people dealing with surfaces are afflicted with molysmophobia and rightfully so In the past the subject of surface contamination had been discussed in various meetings but this symposium was hailed as the most comprehensive symposium ever held on this important topic as the technical program comprised 70 papers by more than 100 authors from 10 countries The symposium was truly international in scope and spirit and was very well attended The attendees represented a broad spectrum of backgrounds interests and professional affiliations but all had a common interest and concern about surface contamination and cleaning
