Modern Biology Roland Hoste, 1971-01-01 **Current Catalog** National Library of Medicine (U.S.), 1979 First multi year cumulation covers six years 1965-70 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1965 **Genetic Explanations** Sheldon Krinsky, Jeremy Gruber, 2013-02-26 No longer viewed by scientists as the cell's fixed master molecule DNA is a dynamic script that is ad libbed at each stage of development What our parents hand down to us is just the beginning Genetic Explanations urges us to replace our faith in genetic determinism with scientific knowledge about genetic plasticity and epigenetic inheritance **Selected Writings on Self-organization, Philosophy, Bioethics, and Judaism** Henri Atlan, 2011 During the last thirty years biophysicist and philosopher Henri Atlan has been a major voice in contemporary European philosophical and bio ethical debates In a massive oeuvre that ranges from biology and neural network theory to Spinoza's thought and the history of philosophy and from artificial intelligence and information theory to Jewish mysticism and to contemporary medical ethics Atlan has come to offer an exceptionally powerful philosophical argumentation that is as hostile to scientism as it is attentive to biology's conceptual and experimental rigor as careful with concepts of rationality as it is committed to rethinking the human place in a radically determined yet forever changing world

Book Jacket Bibliography of the History of Medicine , Contemporary Dualism Andrea Lavazza, Howard Robinson, 2014-02-03 Ontological materialism in its various forms has become the orthodox view in contemporary philosophy of mind This book provides a variety of defenses of mind body dualism and shows explicitly or implicitly that a thoroughgoing ontological materialism cannot be sustained The contributions are intended to show that at the very least ontological dualism as contrasted with a dualism that is merely linguistic or epistemic constitutes a philosophically respectable alternative to the monistic views that currently dominate thought about the mind body or perhaps more appropriately person body relation

Contributions to Periodicals January June Contemporary Perspectives on Architectural Organicism Gary Huafan He, Skender Luarasi, 2023-06-07 This project is born out of similar questions and discussions on the topic of organicism emergent from two critical strands regarding the discourse of organic self generation one dealing with the problem of stopping in the design processes in history and the other with the organic legacy of style in the nineteenth century as a preeminent form of aesthetic ideology The epistemologies of self generation outlined by enlightenment and critical philosophy provided the model for the discursive formations of modern urban planning and architecture The form of the organism was thought to calibrate modernism's infinite extension The architectural organicism of today does not take on the language of the biological sciences as they did in the nineteenth and twentieth centuries but rather the image of complex systems be they computational informational geo ecological or even ontological aesthetic networks What is retained from the modernity of yesterday is the ideology of endless self generation Revisiting such a topic feels relevant now in a time when the idea of endless generation is rendered more suspect than ever amid an ever increasing speed and complexity of artificial intelligence AI networks The essays collected in this book offer a variety of critiques of the modernist idea of endless growth in the fields of architecture literature philosophy and the history of science They range in scope from theoretical and speculative to analytic and critical and from studies of the history of modernity to reflections of our contemporary world Far from advocating a return to the romantic forms of nineteenth century naturphilosophie this project focuses on probing organicism for new forms of critique and emergent subjectivities in a contemporary post pandemic constellation of neo naturalism in design climate change complex systems and information networks This book will be of interest to a broad range of researchers and professionals in architecture and art history historians of science visual artists and scholars in the humanities more generally **Animal Physiology** PS Verma | BS Tyagi | VK Agarwal, 2000-10 For B Sc B Sc Hons and M Sc Classes of All Indian Universities **Nodes of Translation** Martin Christof-Füchsle, Razak Khan, 2024-01-29 The volume examines translation of key German texts into the modern Indian languages as well as translation from the vernacular languages of South Asia into German Our key concerns are shifting historical contexts concepts and translation practices Bringing an intellectual history dimension to translation studies we explore the history of translation translators and sites of translation The organization of the volume follows some key questions Which texts were being translated At what point or period in time did this happen What were the motivations behind these translations Topics covered range from thematic nodes or clusters e g translations of Economics texts and ideas into Urdu or the translation of Marx and Engels into Marathi to personal endeavours such as the first Hindi translation of Goethe's Faust done by Bholanath Sharma in 1939 Missionary as well as Marxist activist translation work from Malayalam Tamil and Telugu is included too On the other hand German translations of Tagore and Gandhi setting in shortly after 1912 are also examined Also discussed are political strategies of publication of translations from modern Indian languages guiding the output of publishing houses in the GDR after 1949

Further included are the translator's perspective and the contemporary translation and literary culture. What happens through the process of linguistic translation in the realm of cultural translation? What can a historical study of translation tell us about the history of Indo-German intellectual entanglements in the long twentieth century? The volume brings together multifaceted interdisciplinary research work from South Asian and German studies to answer some of these questions.

Molecular Ecology And Evolution: The Organismal Side: Selected Writings From The Avise Laboratory John C. Avise, 2010-08-18. This volume is a reprinted collection of 69 classics from the Avise laboratory chosen to illustrate a trademark brand of research that harnesses molecular markers to scientific studies of natural history and evolution in the wild. Spanning the early 1970s through the late 2000s, these articles trace how the author and his colleagues have used molecular genetics techniques to address multifarious conceptual topics in genetics, ecology, and evolution in a fascinating menagerie of creatures with oft-peculiar lifestyles. The organisms described in this volume range from blind cavefish to male pregnant pipefishes and sea spiders from clonal armadillos to natal homing marine turtles from hermaphroditic sea snails to hybridizing monkeys and tree frogs from clonal marine sponges to pseudohermaphroditic mollusks to introgressing oysters and from endangered pocket gophers, terrapins, and sparrows to unisexual all-female fish species to living fossil horseshoe crabs and even to a strange little fish that routinely mates with itself. The conceptual and molecular topics addressed in this volume are also universal, ranging from punctuated equilibrium to coalescent theory to the need for greater standardization in taxonomy from cytonuclear disequilibrium statistics to the ideas of speciation duration and sympatric speciation from historical population demography to phylogenetic reconstructions of males' sexual ornaments from the population genetic consequences of inbreeding to Pleistocene effects on phylogeography and from the molecular underpinnings of null alleles to the notion of clustered mutations that arise in groups to compelling empirical evidence for the unanticipated processes of gene conversion and concerted evolution in animal mitochondrial DNA. Overall, this collection includes many of the best, most influential, sometimes controversial, occasionally provocative, always intriguing, or otherwise entertaining publications to have emerged from the Avise laboratory over the last four decades. Thus, this book conveys through the eyes of one of the field's longstanding pioneers what the organismal side of molecular ecology and evolution really means. [Library of Congress Catalog](#)
