enables readers to construct use equipment in their own production laboratories Primarily intended for technicians working with optical electronic materials it is also relevant to optical devices metallography ceramics geology gemstones metrology production engineering The Fabry-Perot Interferometer M Vaughan, 2017-11-22 The Fabry Perot Interferometer History Theory Practice and Applications presents an invaluable introduction to the Fabry Perot interferometer including a brief

overview of its history a look at its applications and plenty of practical advice on how to use the instrument Electro-optic and Photorefractive Materials Peter Günter, 2012-12-06 This volume is based on lectures and contributed papers presented at the Eleventh Course of the International School of Materials Science and Technology that was held in Erice Sicily Italy at the Ettore Majorana Center for Scientific Culture during the period 6-17 July 1986 The subject of the course was Electro optic and Photorefractive Materials Applications in Signal Processing and Phase Conjugation The fields of electro optics and photorefractive materials have developed rapidly since the invention of lasers just over twenty five years ago The possibility of altering the optical properties of a material by electric fields or by its optical waves is of great importance for both pure science and

for practical applications such as optical signal processing telecommunications and optical display devices These effects allow us to manipulate modulate deflect and process a given light wave Modulation deflection and processing of light waves by means of the electro optic effect is of fundamental importance in fiber optic telecommunications and sensor systems where the light signals can be processed prior or subsequent to transmission through the fibers Thin film electro optic materials with suitable electrode arrays on the surface of the wave guiding structures result in a technology often referred to as integrated optics In principle integrated optics devices allow miniaturization and integration of many operations onto a single chip The photorefractive effect defined as a photo induced change of the indices of refraction was the other topic treated in this course

Ion Exchange in Single Crystals for Integrated Optics and Optoelectronics Yu N. Korkishko, V. A. Fedorov, 1999 The book addresses many problems of ion exchange processes in LiNbO_3 LiTaO_3 and KTiOPO_4 ferroelectrics and II VI semiconductor single crystals for integrated optics applications The authors start with the fundamentals of ion exchange processes in solids Chapter 1 Chapter 1 can be considered also as an enlarged introduction to the book Starting with Chapter 2 the general properties of LiNbO_3 and LiTaO_3 crystals the methods used to study optical waveguides in these crystals as well as advanced preparation methods of optical waveguides are reviewed Chapters 3 4 and 5 are devoted to recent progress in the ion exchange processes in LiNbO_3 LiTaO_3 and KTiOPO_4 crystals respectively and Chapter 6 summarizes the main applications of ion exchanged waveguides in modern integrated optics Finally Chapter 7 deals with recently established ion exchange processes in II VI semiconductors

Synchrotron Radiation Sources and Applications G.N Greaves, I.H Munro, 1989-01-01 Synchrotron radiation facilities embrace an unusually wide range of scientific and technical skills including high brilliance electron accelerator technology ultra high vacuum precision engineering and beamline optical engineering With individual contributions from specialists in each area Synchrotron Radiation Sources and Applications comprehensively covers various topics from the basic theory of synchrotron radiation to its uses as an experimental tool in atomic molecular and solid state physics

Characterization of Crystal Growth Defects by X-Ray Methods B.K. Tanner, 2013-04-17 This book contains the proceedings of a NATO Advanced Study Institute entitled Characterization of Crystal Growth Defects by X ray Methods held in the University of Durham England from 29th August to 10th September 1979 The current interest in electronic materials in particular silicon gallium aluminium arsenide and quartz and the recent availability of synchrotron radiation for X ray diffraction studies made this Advanced Study Institute particularly timely Two main themes ran through the course 1 A survey of the various types of defect occurring in crystal growth the mechanism of their different methods of generation and their influence on the properties of relatively perfect crystals 2 A detailed and advanced course on the observation and characterization of such defects by X ray methods The main emphasis was on X ray topographic techniques but a substantial amount of time was spent on goniometric techniques such as double crystal diffractometry and gamma ray diffraction The presentation of material in this book reflects these twin

themes Section A is concerned with defects Section C with techniques and in linking them Section B provides a concise account of the basic theory necessary for the interpretation of X ray topographs and diffractometric data Although the sequence follows roughly the order of presentation at the Advanced Study Institute certain major changes have been made in order to improve the pedagogy In particular the first two chapters provide a vital and seldom articulated case for the need for characterization for crystals used in device technologies
