International Conference on Cyber Warfare and Security Richard L. Wilson,Brendan Curran,2023-03-09

Subversion Lennart Maschmeyer,2024 In 2014 Russia launched a Hybrid War against Ukraine that according to some ushered in a revolution in conflict The term is notoriously vague referring to all measures short of war states use to attain strategic aims States of course have long used measures in the gray zone between war and peace Yet they did not always have the Internet **Cyberwarfare** Kristan Stoddart,2022-11-18 This book provides a detailed examination of the threats and dangers facing the West at the far end of the cybersecurity spectrum It concentrates on threats to critical infrastructure which includes major public utilities It focusses on the threats posed by the two most potent adversaries competitors to the West Russia and China whilst considering threats posed by Iran and North Korea The arguments and themes are empirically driven but are also driven by the need to evolve the nascent debate on cyberwarfare and conceptions of cyberwar This book seeks to progress both conceptions and define them more tightly This accessibly written book speaks to those interested in cybersecurity international relations and international security law criminology psychology as well as to the technical cybersecurity community those in industry governments policing law making and law enforcement and in militaries particularly NATO members *Cyber Security And Human Factors: Keeping Information Safe* Tarnveer Singh,2023-05-24 *Cyber Security And Human Factors* was released for free to help improve knowledge sharing in the sector The free distribution has helped Individuals and Organisations providing this handbook with detailed guidance on how to improve Cyber Security and Human Factors The human factor in Cyber Security is often seen as a weak link in the security chain But it is fair to say that human intuition all too often has also played a key role in preventing cyber threats materialising All systems require us humans to receive alerts and subject these to our interpretation Human intellect is capable of processing numerous inputs and we instinctively know when an issue has arisen We hope technology can improve our security posture when a superior tactic may be to dig deeper into human nature Our norms habits and quirks determine our security awareness We can change these and build a security mindset that focuses on our strength which is complex reasoning Our habits mean humans have tendency to find shortcuts Security professionals must think like a hectic employee a rushed director or a preoccupied secretary We must remove complexity from all of our practices Human brains process information in less time than many cybersecurity measures take to be implemented Smartphones productivity apps and fast connection speeds have set an expectation of instant access We also must consider the insider threat Human lives are complex and they bring this to the workplace They have stressors whether these are financial difficulties poor mental health drugs alcohol

gambling idealism politics and power Leadership and human intuition can be vital in improving security Conducting a security review of employees once per month with colleagues from HR IT Operations etc can help identify staff who have too much access or staff who are struggling and need support Otherwise gathering intelligence on changes from these areas can also help Human reasoning can look at the situation from an enterprise perspective and spot warning signs earlier Malicious actors take advantage of human nature They target people who are vulnerable powerful or complacent Increasingly we see sophisticated techniques like using social media to develop something that will interest their target or get them to drop their defences The bad actors are evolving and so your security training program has to evolve Continually update about new threats Reminding people that they could be targeted Drive home the point to trust nothing Testing is an important part of education Send fake emails conduct hacking exercises play war games that simulate an attack or ransom situation Staff are fooled by these even when they know they could be tested These represent opportunities to embed learning points and encourage staff to take their time trust their instincts and validate Cyber threats arise increasingly from basic opportunities We can improve by understanding basic human nature Information security awareness should help establish correct security procedures and security principles in the minds of all employees Increased awareness minimizes user related security threats and maximizes the efficiency of security techniques But we must go beyond security awareness and better understand our people and their mindsets to be truly transformational The book has been written by a CISO and includes step by step guidance for successful cyber security in any organisation through better understanding the individuals within it It considers issues InfoSec leaders will encounter such as Cyber Security Cyber Safety Cyber Crime Information Security Management Cyber Vulnerabilities Cyber Attack Vectors Risk Management Business Continuity Security Education Awareness and Human Factors

Fitzpatrick assesses Iran's residual nuclear capabilities, its freshly intensified resentment, and its perceived need to defensively arm itself. Anna M. Gielas argues that humans must be kept actively engaged in artificial intelligence interfaces used in autonomous warfare to preserve human discretion and cognitive readiness to intervene. Ramon Pacheco Pardo judges that Yoon Suk-yeol's December 2024 declaration of martial law ultimately served to underscore the resilience of South Korean democracy. Dana H. Allin and Jonathan Stevenson examine the windows of opportunity that precipitated Israel's strikes on Iran, Israel's current strategic superiority, and a US president disinclined to prevent Israeli action.
