Cybernetic Revolutionaries Eden Medina, 2014-01-10 A historical study of Chile's twin experiments with cybernetics and socialism and what they tell us about the relationship of technology and politics In *Cybernetic Revolutionaries* Eden Medina tells the history of two intersecting utopian visions one political and one technological The first was Chile's experiment with peaceful socialist change under Salvador Allende the second was the simultaneous attempt to build a computer system that would manage Chile's economy Neither vision was fully realized Allende's government ended with a violent military coup the system known as Project Cybersyn was never completely implemented but they hold lessons for today about the relationship between technology and politics Drawing on extensive archival material and interviews Medina examines the cybernetic system envisioned by the Chilean government which was to feature holistic system design decentralized management human computer interaction a national telex network near real time control of the growing industrial sector and modeling the behavior of dynamic systems She also describes and documents with photographs the network's Star Trek like operations room which featured swivel chairs with armrest control panels a wall of screens displaying data and flashing red lights to indicate economic emergencies Studying project Cybersyn today helps us understand not only the technological ambitions of a government in the midst of political change but also the limitations of the Chilean revolution This history further shows how human attempts to combine the political and the technological with the goal of creating a more just society can open new technological intellectual and political possibilities Technologies Medina writes are historical texts when we read them we are reading history *The Cybernetic Revolution* John Rose, 1974

Industry 4.0 Tessa Leno Devezas, João Leitão, Askar Sarygulov, 2017-02-28 This book presents the latest research perspectives on how the Industry 4.0 paradigm is challenging the process of technological and structural change and how the diversification of the economy affects structural transformation It also explores the impact of fast growing technologies on the transformation of socioeconomic and environmental systems and asks whether structural and technological change can generate sustainable economic growth and employment Further the book presents the basic innovations new technologies materials energy etc and industrial policies that can lead to such a structural change *HISTORY & MATHEMATICS* Leonid Grinin, Andrey Korotayev, The present Yearbook which is the eighth in the series is subtitled Investigating Past and Future It is devoted to three problems the analysis of the aspects of past and present in the light of formal methods singularity i.e. forthcoming abrupt shift in development the approach or even presence of which we already feel the aspects of the cosmic future of human race This issue consists of four sections I History Technologies Politics and Mathematics includes five articles on different directions of factual or theoretical content history technology politics and studies covering past present and future II Singularity includes two contributions and is devoted to a rather interesting phenomenon of singularity They suggest that indeed the hyperbolic planetary evolutionary trend observed since the origins of life on the Earth cannot

continue beyond the forthcoming singularity whereas the post singular evolutionary trend should be qualitatively different from what has been observed before III Beyond the Earth also consists of two very different articles but they are united by their interest in the future of human race in terms of their interaction with the space IV Reviews and Notes We hope that this issue will be interesting and useful both for historians and mathematicians as well as for all those dealing with various social and natural sciences *Economic Cycles, Crises, and the Global Periphery* Leonid Grinin, Andrey Korotayev, Arno

Tausch, 2016-10-25 This thought provoking monograph analyzes long medium and short term global cycles of prosperity recession and depression plotting them against centuries of important world events Major research on economic and political cycles is integrated to clarify evolving relationships between the global center and its periphery as well as current worldwide economic upheavals and potential future developments Central to this survey are successive waves of industrial and later technological and cybernetic progress leading to the current era of globalization and the changes of the roles of both Western powers and former minors players however that will lead to the formation of the world order without a hegemon Additionally the authors predict what they term the Great Convergence the lessening of inequities between the global core and the rest of the world including the wealth gap between First and Third World nations Among the topics in this ambitious volume Why politics is often omitted from economic analysis Why economic cycles are crucial to understanding the modern geopolitical landscape How the aging of the developed world will affect world technological and economic future p The evolving technological forecast for Global North and South Where the U S is likely to stand on the future world stage *Economic Cycles Crises and the Global Periphery* will inspire discussion and debate among sociologists global economists demographers global historians and futurologists This expert knowledge is necessary for further research proactive response and preparedness for a new age of sociopolitical change *Globalistics and Globalization Studies* George Modelski, Anton L.

Malkov, Lowell Gustafson, David Baker, Alexander V. Markov, Joseph Voros, Alexander D. Panov, 2015-01-01 This yearbook is the fourth in the series with the title *Globalistics and Globalization Studies* The subtitle of the present volume is *Global History Big History* The point is that today our global world really demands global knowledge Thus there are a few actively developing multidisciplinary approaches and integral disciplines among which one can name Global Studies Global History and Big History They all provide a connection between the past present and future Big History with its vast and extremely heterogeneous field of research encompasses all the forms of existence and all timescales and brings together constantly updated information from the scientific disciplines and the humanities Global History is transnational or world history which examines history from a global perspective making a wide use of comparative history and of the history of multiple cultures

and nations Global Studies express the view of systemic and epistemological unity of global processes Thus one may argue that Global Studies and Globalistics can well be combined with Global History and Big History and such a multi disciplinary approach can open wide horizons for the modern university education as it helps to form a global view of various processes

Reconsidering the Limits to Growth Viktor

Sadovnichy,Askar Akaev,Ilya Ilyin,Sergey Malkov,Leonid Grinin,Andrey Korotayev,2023-09-25 Echoing the famous The Limits to Growth report from 1972 this edited volume analyses the changes that the World System has undergone to the present on the fiftieth anniversary of the original report During the past fifty years both the concept and understanding of these limits have significantly changed This book highlights that the evolution of the World System has approached a new critical milestone moving into a fundamentally new phase of historical development when the old economic and social technologies no longer work as efficiently as before or even begin to function counterproductively which leads the World System into a systemic crisis The book discusses the transition of human society to a new phase state the shape of which has not yet been determined New approaches are needed for both for the analysis of the global situation and for forecasts The book is based on an integrated approach including the world systems historical and evolutionary perspectives as well as a systematic view of society in which changes in one subsystem cause transformations in others Through mathematical modeling it defines the main vectors of transformations of the World System makes a detailed forecast of the development of all the main subsystems of the society and the World System while presenting horizons of changes from short term to ultra long term and presents

different development scenarios as well as recommendations on how to achieve a transition to the most favorable scenario The book will appeal to members and followers of the Club of Rome policy makers as well as to scholars from various disciplines interested in a better understanding of the World System evolution global futures development studies climate change and future societies

Globalistics and globalization studies Leonid E. Grinin,Ilya V. Ilyin,Peter Herrmann,Andrey V. Korotayev,2016-01-01 The present volume is the fifth in the series of yearbooks with the title Globalistics and Globalization Studies The subtitle of the present volume is Global Transformations and Global Future We become more and more accustomed to think globally and to see global processes And our future can all means be global However is this statement justified Indeed in recent years many have begun to claim that globalization has stalled that we are rather dealing with the process of anti globalization Will not we find ourselves at some point again in an edifice spanning across the globe but divided into national apartments separated by walls of high tariffs and mutual suspicion Of course some setbacks are always possible because the process of globalization cannot develop smoothly It is a process which is itself emerging from contradictions and is shaped by a new contradiction They often go much further than underlying systemic changes allow They break forward as the vanguard of a victorious army and then often meet resistance of various social and political forces and may suddenly start to roll back just at the moment when everyone expects their further offensive We believe that this is what is happening with globalization at present The yearbook will be interesting to a wide range of researchers teachers students and all those who are concerned about global issues

Globalistics and Globalization Studies: Theories, Research & Teaching Leonid Grinin,Ilya Ilyin,Andrey Korotayev,2013-09-30 This is the second issue of the new series titled Globalistics and Globalization Studies Globalistics may be regarded as a sort of systemic and more or less integrated core within Global Studies At present Global Studies function in two main dimensions in the research of global political economic cultural and social processes on the one hand and in the realm of teaching manifesting themselves in the creation of various Global Studies programs and courses for university students who learn to see the world in its entirety and variety The second dimension is immensely important as the contents of such programs and courses may determine how the world will be comprehended by those people who may decide its fate in a decade or two This dualistic nature of Global Studies has determined the general direction of our anthology that comprises both the theoretical dimension of Global Studies and their application to the teaching process The anthology consists of three parts presenting a wide range of views on the meaning of the contemporary epoch the past and the future of some important global processes as well as the problems and successes in the teaching process of Global Studies Part 1 Globalization in Historical Retrospective Part 2 Globalistics Global Studies and Global Processes Part 3 Teaching Global Studies In the present anthology one can find perceptions of globalization by a number of famous scholars from different countries of the world Ervin Laszlo Christopher Chase Dunn and others but one can also get to know rather peculiar visions of globalization by Russian scientists and

educators Evolution: Development within Big History, Evolutionary and World-System Paradigms Leonid E. Grinin, Andrey V. Korotayev, 2013-09-30 The application of the evolutionary approach to the history of nature and society has remained one of the most effective ways to conceptualize and integrate our growing knowledge of the Universe life society and human thought The present volume demonstrates this in a rather convincing way This is the third issue of the Almanac series titled Evolution The first volume came out with the sub heading Cosmic Biological and Social the second was entitled Evolution A Big History Perspective The present volume is subtitled Development within Big History Evolutionary and World System Paradigms In addition to the straightforward evolutionary approach it also reflects such adjacent approaches as Big History the world system analysis as well as globalization paradigm and long wave theory The volume includes a number of the exciting works in these fields The Almanac consists of five sections The first section Globalization as an Evolutionary Process Yesterday and Today contains articles demonstrating that the Evolutionary studies is capable of creating a common platform for the world system approach globalization studies and the economic long wave theory The articles of the second section Society Energy and Future discuss the role of energy in the universal evolution human history and the future of humankind The third section Aspects of Social Development touches upon four aspects of social evolution technological environmental cultural and political The fourth section The Driving Forces and Patterns of Evolution deals with various phases of megaevolution There is also a final section which is devoted to discussions of contemporary evolutionism This Almanac will be useful both for those who study interdisciplinary macroproblems and for specialists working in focused directions as well as for those who are interested in evolutionary issues of Cosmology Biology History Anthropology Economics and other areas of study More than that this edition will challenge and excite your vision of your own life and the new discoveries going on around us The Oxford Handbook of Cyber Security Paul Cornish, 2021 As societies governments corporations and individuals become more dependent on the digital environment so they also become increasingly vulnerable to misuse of that environment A considerable industry has developed to provide the means with which to make cyber space more secure stable and predictable Cyber security is concerned with the identification avoidance management and mitigation of risk in or from cyber space the risk of harm and damage that might occur as the result of everything from individual carelessness to organised criminality to industrial and national security espionage and at the extreme end of the scale to disabling attacks against a country's critical national infrastructure But this represents a rather narrow understanding of security and there is much more to cyber space than vulnerability risk and threat As well as security from financial loss physical damage etc cyber security must also be for the maximisation of benefit The Oxford Handbook of Cyber Security takes a comprehensive and rounded approach to the still evolving topic of cyber security the security of cyber space is as much technological as it is commercial and strategic as much international as regional national and personal and as much a matter of hazard and vulnerability as an opportunity for social economic and cultural growth The Cyber Enigma Pasquale
