## **Cybernetics Of The Sacred:**

**Cybernetics of the Sacred** Paul Ryan, 1974      **Birth and Death and Cybernation** Paul Ryan, 1973      The Cybernetics Moment Ronald R. Kline, 2015-07-15 Choice Outstanding Academic Title Cybernetics the science of communication and control as it applies to machines and to humans originates from efforts during World War II to build automatic anti-aircraft systems Following the war this science extended beyond military needs to examine all systems that rely on information and feedback from the level of the cell to that of society In *The Cybernetics Moment* Ronald R Kline a senior historian of technology examines the intellectual and cultural history of cybernetics and information theory whose language of information feedback and control transformed the idiom of the sciences hastened the development of information technologies and laid the conceptual foundation for what we now call the Information Age Kline argues that for about twenty years after 1950 the growth of cybernetics and information theory and ever more powerful computers produced a utopian information narrative an enthusiasm for information science that influenced natural scientists social scientists engineers humanists policymakers public intellectuals and journalists all of whom struggled to come to grips with new relationships between humans and intelligent machines Kline traces the relationship between the invention of computers and communication systems and the rise decline and transformation of cybernetics by analyzing the lives and work of such notables as Norbert Wiener Claude Shannon Warren McCulloch Margaret Mead Gregory Bateson and Herbert Simon Ultimately he reveals the crucial role played by the cybernetics moment when cybernetics and information theory were seen as universal sciences in setting the stage for our current preoccupation with information technologies Nowhere in the burgeoning secondary literature on cybernetics in the last two decades is there a concise history of cybernetics the science of communication and control that helped usher in the current information age in America Nowhere that is until now Readers have in *The Cybernetics Moment* the first authoritative history of American cybernetics *Information Culture* A n extremely interesting and stimulating history of the concepts of cybernetics This is a book for everyone to read relish and think about Choice As a whole the book presents a comprehensive in depth retrospective analysis of the contribution of the American scientific school to the making formation and development of cybernetics and information theory An unquestionable advantage of the book is the skillful use of numerous bibliographic sources by the author that reflect the scientific engineering and social significance of the questions being considered competition of ideas and developments and also interrelations between scientists Cybernetics and System Analysis Dr Kline is perhaps uniquely situated to take on so large and complicated a topic as cybernetics Readers unfamiliar with Wiener and his work are well advised to start with this well written and thorough book Those who are already familiar will still find much that is new and informative in the thorough research and reasoned interpretations IEEE History Center The most comprehensive intellectual history of cybernetics in Cold War America *Journal of American History* The book will be most valuable as historical background for the large number

of disciplines that were involved in the cybernetics moment computer science communications engineering information theory and the social sciences of sociology and anthropology IEEE Technology and Society Magazine Ronald Kline's chronicle of cybernetics certainly does what an excellent history of science should do It takes you there to the golden age of a new exciting field You will almost smell that cigar Second Order Cybernetics Kline's The Cybernetics Moment tracks the rise and fall of the cybernetics movement in more detail than any historical account to date Los Angeles Review of Books

**The Making of a Postsecular Society** Massimo Rosati, 2016-03-03 Drawing on the thought of Durkheim this volume focuses on societal changes at the symbolic level to develop a new conceptualisation of the emergence of postsecular societies Neo Durkheimian categories are applied to the case of Turkey which in recent years has shifted from a strong Republican and Kemalist view of secularism to a more Anglo Saxon perspective Turkish society thus constitutes an interesting case that blurs modernist distinctions between the secular and the religious and which could be described as postsecular Presenting three symbolic case studies the enduring image of the founder of the Republic Atatürk the contested site of Ayasofia and the remembering and commemoration of the murdered journalist Hrant Dink The Making of a Postsecular Society analyses the cultural relationship that the modern Republic has always had with Europe considering the possible implications of the Turkish model of secularism for a specifically European self understanding of modernity Based on a rigorous construction of theoretical categories and on a close scrutiny of the common challenges confronting Europe and its Turkish neighbour long considered other with regard to the accommodation of religious difference this book sheds light on the possibilities for Europe to find new ways of arranging the relationship between the secular and the religious As such it will appeal to scholars of social theory the sociology of religion secularisation and religious difference and social change

**Notes on the Cybernetics of Language and Video** Stephen Jones, 1979 Neuromatic John Lardas Modern, 2021-09-29 The story Modern tells ranges from eighteenth century brain anatomies to the MRI from the spread of phrenological cabinets and mental pieties in the nineteenth century to the discovery of the motor cortex and the emergence of the brain wave as a measurable manifestation of cognition from cybernetic research into neural networks and artificial intelligence to the founding of brain centric religious organizations such as Scientology from the deployments of cognitive paradigms in electric shock treatment to the work of Barbara Brown a neurofeedback pioneer who promoted the practice of controlling one's own brainwaves in the 1970s What Modern reveals via this grand tour is that our ostensibly secular turn to the brain is bound up at every turn with the religion it discounts ignores or actively dismisses Nowhere are science and religion closer than when they try to exclude each other at their own peril

**The Work of Art in the Age of Deindustrialization** Jasper Bernes, 2017-05-16 A novel account of the relationship between postindustrial capitalism and postmodern culture this book looks at American poetry and art of the last fifty years in light of the massive changes in people's working lives Over the last few decades we have seen the shift from an economy based on the production of goods to one based on the provision of

services the entry of large numbers of women into the workforce and the emergence of new digital technologies that have transformed the way people work The Work of Art in the Age of Deindustrialization argues that art and literature not only reflected the transformation of the workplace but anticipated and may have contributed to it as well providing some of the terms through which resistance to labor was expressed As firms continue to tout creativity and to reorganize in response to this resistance they increasingly rely on models of labor that derive from values and ideas found in the experimental poetry and conceptual art of decades past Buddhism, the Internet, and Digital Media Gregory Price Grieve, Daniel Veidlinger, 2014-09-19 Buddhism the Internet and Digital Media The Pixel in the Lotus explores Buddhist practice and teachings in an increasingly networked and digital era Contributors consider the ways Buddhism plays a role and is present in digital media through a variety of methods including concrete case studies ethnographic research and content analysis as well as interviews with practitioners and cyber communities In addition to considering Buddhism in the context of technologies such as virtual worlds social media and mobile devices authors ask how the Internet affects identity authority and community and what effect this might have on the development proliferation and perception of Buddhism in an online environment Together these essays make the case that studying contemporary online Buddhist practice can provide valuable insights into the shifting role religion plays in our constantly changing mediated hurried and uncertain culture Ritual and Religion in the Making of Humanity Roy A. Rappaport, 1999-03-25 Roy Rappaport argues that religion is central to the continuing evolution of life although it has been displaced from its original position of intellectual authority by the rise of modern science His book which could be construed as in some degree religious as well as about religion insists that religion can and must be reconciled with science Combining adaptive and cognitive approaches to the study of humankind he mounts a comprehensive analysis of religion s evolutionary significance seeing it as co extensive with the invention of language and hence of culture as we know it At the same time he assembles the fullest study yet of religion s main component ritual which constructs the conceptions which we take to be religious and has been central in the making of humanity s adaptation The text amounts to a manual for effective ritual illustrated by examples drawn from anthropology history philosophy comparative religion and elsewhere The Routledge Companion to Literature and Science Bruce Clarke, Manuela Rossini, 2010-09-13 Pt 1 Literatures and sciences pt 2 Disciplinary and theoretical approaches pt 3 Periods and cultures **Folk-lore** ,1974 **Behaviourist Art and Cybernetics** Kate Sloan, 2025-09-29 Drawing together key areas of cybernetic art practice in the UK and USA this book assesses British and American cybernetic art as relating to the intersecting field of Behaviourism This study takes as a starting point Roy Ascott s essay Behaviourist Art and the Cybernetic Vision 1966 and uses it to define a field of Behaviourist art from the period 1945 1975 Kate Sloan establishes the role of the cybernetic concept of feedback as a defining factor in understanding works of art as behavioural expanded well beyond the perimeters of what we consider cybernetic art The book also demonstrates how light as a behavioural trigger informed

several discrete areas of art making from cybernetic art to countercultural light shows and behaviourist architectures The book will be of interest to scholars working in art history technology studies music history architectural history and design history

**The Cybernetic Imagination in Science Fiction** Patricia S. Warrick, 1980 Science fiction criticism Focuses on literary scientific material

**Children of Ezekiel** Michael Lieb, 1998 Discusses the relationship between the biblical prophet Ezekiel's vision of wheels in the air and the present day end of time concept as seen in various religious sects

**Kenneth Burke + The Posthuman** Chris Mays, Nathaniel A. Rivers, Kellie Sharp-Hoskins, 2017-10-15 While rhetoric as a discipline is firmly planted in humanism and anthropology posthumanism seeks to leave the human behind This highly original examination of Kenneth Burke's thought grapples with these ostensibly contradictory concepts as opportunities for invention revision and importantly transdisciplinary knowledge making Rather than simply mapping posthumanist rhetorics onto Burke's scholarship Kenneth Burke The Posthuman focuses on the multiplicity of ideas found both in his work and in the idea of posthumanism Taking varied approaches organized within a framework of boundaries and futures the contributors show that studying the humanist theories of Burke in this way creates a satisfyingly chaotic web of interconnections The essays look at how Burke's writing on the human mind and technology from his earliest works to his very latest revisions interrelates with current concepts such as new materiality and coevolution Throughout the contributors pay close attention to the fluidity concerns and contradictions inherent in language symbolism and subjectivity A unique illuminating exploration of the contested relationship between bodies and language this inherently transdisciplinary book will propel important future inquiry by scholars of rhetoric Burke and posthumanism In addition to the editors the contributors are Casey Boyle Kristie Fleckenstein Nathan Gale Julie Jung Steven B Katz Steven LeMieux Jodie Nicotra Jeff Pruchnic Timothy Richardson Thomas Rickert and Robert Wess

**The Bloomsbury Handbook of World Theory** Jeffrey R. Di Leo, Christian Moraru, 2021-11-18 Disciplines from literary studies to environmentalism have recently undergone a spectacular reorientation that has refocused entire fields methodologies and vocabularies on the world and its sister terms such as globe planet and earth The Bloomsbury Handbook of World Theory examines what world means and what it accomplishes in different zones of academic study The contributors raise questions such as What happens when world is appended to a particular form of humanistic or scientific inquiry How exactly does worlding bear on the theoretical operating system and the history of that field What is the theory or theoretical model that allows world to function in a meaningful way in coordination with that knowledge domain With contributions from 38 leading theorists from a vast range of fields including queer studies religion and pop culture this is the first large reference work to consider the profound effect both within and outside the academy of the worlding of discourse in the 21st century

**Video Mind, Earth Mind** Paul Ryan, 1993 Video Mind Earth Mind is a collection of texts 1968 1991 by Paul Ryan offering ideas about how video and television can be used to respond to our ecological crisis For example Mr Ryan presents the development of a teachable method for using video to interpret the natural world Based on

this method he articulates a systemic way of using television to ground human communication in ecological systems He argues that grounding our television communications in ecological systems will help control our runaway destruction of this planet and shape ways of living on earth that are sustainable

**Systems Science and Cybernetics - Volume II** Francisco Parra-Luna, 2009-10-30

The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand

control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

*The Beauty of Detours* Yoni Van Den Eede, 2019-12-01 Winner of the 2020 S I Hayakawa Book Prize presented by The Institute of General Semantics Winner of the 2020 Susanne Langer Award for Outstanding Scholarship in the Ecology of Symbolic Form presented by the Media Ecology Association The Beauty of Detours proposes a new way of understanding and defining technology by reading systems thinker Gregory Bateson in the framework of contemporary philosophy of technology Although technology was not an explicit focus of Bateson s oeuvre Yoni Van Den Eede shows that his thought is permeated with insights directly relevant to contemporary technological concerns This book provides a systematic reading of Bateson that reveals these under investigated elements of his thought It also critiques the field of philosophy of technology for still reifying technology too much despite its attempt to de reify it arguing instead that it should incorporate Bateson s insights and focus more on processes of human knowing Sketching a Batesonian philosophy of technology Van Den Eede calls for greater attentiveness to the purpose of technology and its role in our lives

*Social Practices and City Spaces* Kyriaki Tsoukala, 2023-11-07 This book examines the relationship between social practices and built space focusing on current cooperative participative and posthuman approaches to its production and management From a social cultural and ecological perspective it explores the modes of engagement of all factors in the constitutional processes of inhabited space Throughout this interdisciplinary collection built space is reconsidered in the light of other schools of thought such as philosophy anthropology social sciences and political theories and practices It covers new ground at conceptual epistemic and methodological levels focusing on inhabited space from within the framework of globalisation biopolitics cultural changes environmental crisis and new technologies Organised into three parts Parts 1 and 2 focus on the role of architects in the emergence of a new ethos for habitation as well as the modalities of the inclusion of differences in design discussing the importance of participation and narrative at a theoretical and practical level in architecture In the third part the chapters delve into questions regarding the intersection of design ecology and technoscience in a posthuman approach which might support the inclusion of differences in design and the emergence of a new environmental ethos Providing a stimulating landscape of arguments and challenges to new readings of architecture society and the environment this book will be of interest to researchers students and professionals of

architecture urban planning anthropology and philosophy
