Cyberspace Divide Equality Agency And Policy In The Information Society:

    Cyberspace Divide Brian Loader,1998 A critical analysis of the newly emerging Information Society Contributors consider the complex relationship between technological change social divisions social actions and strategies for social inclusion in the Information Age   *A Normative Theory of the Information Society* Alistair S. Duff,2012-03-12 There is a clear need for a systematic integrative and rigorous normative theory of the information society In this book Duff offers a prescriptive theory to help to guide the academic and policy communities as they debate the future shape of emerging post industrial information based societies He argues that information policy needs to become anchored in a left liberal philosophy which foregrounds a feasible permutation of the core ideals of freedom equality and brotherhood The information society if it is to be worth having at all cannot be allowed to be largely the outcome of the free play of market forces and technological determinism The social structure including the information economy must be subjected to a regulatory axiological system as explicated by some leading proponents of social democracy This text will be of interest to scholars and students at the cutting edge of information studies journalism and media computer science sociology politics philosophy management and law   *Community Informatics* Dave Eagle,Barry Hague,Leigh Keeble,Brian D. Loader,2005-06-29 Community groups social support networks voluntary agencies and government organisations are all actively exploring the potential of the new information and communication technologies to bring about democratic development and renewal A rich variety of social experiments in what has become known as Community Informatics is now beginning to provide useful research findings and exciting examples of innovative applications This book sets down some of the defining features of a Community Informatics approach and some of the common themes which are emerging In particular it considers the following issues sustainability employment community management public service provision partnerships of stakeholders local learning social support and networks This edited collection brings together leading exponents of Community Informatics from around the world and critically evaluates their experiences   *Bodies of Tomorrow* Sherryl Vint,2007-01-01 Bodies of Tomorrow argues for the importance of challenging visions of humanity in the future that overlook our responsibility as embodied beings connected to a material world   *Virtual Society?* Steve Woolgar,2002-09-26 Almost all aspects of social cultural economic and political life stand to be affected by the new electronic technologies Virtual Society is one vision of the consequential impact of these technologies But to what extent and in what ways are the Internet and other electronic technologies really changing our lives To what extent are we moving to a virtual society This collection provides a comprehensive set of detailed empirical studies of the genesis and use of these new technologies ranging widely across application areas from cyber caf s to new media email and organizational memory to surveillance capable technologies in the workplace virtual reality to CCTV in high rise housing stock exchange addicts to student study networks It offers a unique perspective analytic scepticism for making sense of some surprisingly counterintuitive results and for developing a

refreshingly critical view of many taken for granted assumptions about the impact of the Internet on social relations and institutions Each chapter presents a high quality exemplar of its own disciplinary perspective addressed to a general social science audience The diversity of disciplinary perspectives is brought to bear in a central message laid out in the opening discussion of the Five Rules of Virtuality that with due reflexive caution and ironic sensitivity general messages can be drawn from the observations of particular substantive contexts In particular claims that we are moving to a virtual society need to be tempered by a reassessment of connections between what counts as real and virtual This book will appeal to students and researchers in a very wide range of disciplines both within and beyond the social sciences and management and to all practitioners struggling with the realities of the new virtual technologies *CeDEM Asia 2012* Skoric, Marko M.,Sachs, Michael,Parycek, Peter, Postcolonial Politics, The Internet and Everyday Life M.I. Franklin,2006-05-02 This book explores the technical political economic and sociocultural implications of technological change Using an international political economy approach the author focuses on how the Internet is used by ethnic minorities to communicate **Surveillance as Social Sorting** David Lyon,2005-08-19 The book moves the debate beyond alarmist Big Brother treatments or complacent assumptions that once fair information principles are in place all is well to a constructive and thought provoking level **Virtual Gender** Alison Adam,Eileen Green,2005-08-03 As yet there has been relatively little published on women s activities in relation to new digital technologies Virtual Gender brings together theoretical perspectives from feminist theory the sociology of technology and gender studies with well designed empirical studies to throw new light on the impact of ICTs on contemporary social life A line up of authors from around the world looks at the gender and technology issues related to leisure pleasure and consumption identity and self Their research is set against a backcloth of renewed interest in citizenship and ethics and how these concepts are recreated in an on line situation particularly in local settings With chapters on subjects ranging from gender switching on line computer games and cyberstalking to the use of the domestic telephone this stimulating collection challenges the stereotype of woman as a passive victim of technology It offers new ways of looking at the many dimensions in which ICTs can be said to be gendered and will be a rich resource for students and teachers in this expanding field of study **E-Learning** Elvis Pontes,Adilson Guelfi,Sergio Kofuji,2012-03-14 E learning enables students to pace their studies according to their needs making learning accessible to 1 people who do not have enough free time for studying they can program their lessons according to their available schedule 2 those far from a school geographical issues or the ones unable to attend classes due to some physical or medical restriction Therefore cultural geographical and physical obstructions can be removed making it possible for students to select their path and time for the learning course Students are then allowed to choose the main objectives they are suitable to fulfill This book regards E learning challenges opening a way to understand and discuss questions related to long distance and lifelong learning E learning for people with special needs and lastly presenting case study about the relationship between the quality of interaction and the quality of learning
