Cycles Transfers And Motivic Homology Theories:

Cycles, Transfers, and Motivic Homology Theories Vladimir Voevodsky, Andrei Suslin, Eric M.

Friedlander, 2011-11-12 The original goal that ultimately led to this volume was the construction of motivic cohomology theory whose existence was conjectured by A Beilinson and S Lichtenbaum This is achieved in the book's fourth paper using results of the other papers whose additional role is to contribute to our understanding of various properties of algebraic cycles The material presented provides the foundations for the recent proof of the celebrated Milnor Conjecture by Vladimir Voevodsky The theory of sheaves of relative cycles is developed in the first paper of this volume The theory of presheaves with transfers and more specifically homotopy invariant presheaves with transfers is the main theme of the second paper The Friedlander Lawson moving lemma for families of algebraic cycles appears in the third paper in which a bivariant theory called bivariant cycle cohomology is constructed The fifth and last paper in the volume gives a proof of the fact that bivariant cycle cohomology groups are canonically isomorphic in appropriate cases to Bloch's higher Chow groups thereby providing a link between the authors theory and Bloch's original approach to motivic cohomology *Transcendental Aspects of Algebraic Cycles* S. Müller-Stach, C. Peters, 2004-04-20 Lecture notes for graduates or researchers wishing to enter this modern field of research

Handbook of K-Theory Eric Friedlander, Daniel R. Grayson, 2005-07-18 This handbook offers a compilation of techniques and results in K theory Each chapter is dedicated to a specific topic and is written by a leading expert Many chapters present historical background some present previously unpublished results whereas some present the first expository account of a topic many discuss future directions as well as open problems It offers an exposition of our current state of knowledge as well as an implicit blueprint for future research Algebraic Cycles and Motives: Volume 2

The Arithmetic and Geometry of Algebraic Cycles B. Brent Gordon, James D. Lewis, Stefan Müller-Stach, Shuji

Saito, Noriko Yui, 2012-12-06 The NATO Advanced Study Institute on The Arithmetic and Geometry of Algebraic Cycles was held at the Banff Centre for Conferences in Banff Alberta Canada from June 7 until June 19 1998 This meeting was organized jointly with Centre de Recherches Mathématiques CRM Montreal as one of the CRM Summer schools which take place annually at the Banff Center The conference also served as the kick off activity of the CRM 1998 99 theme year on Number Theory and Arithmetic Geometry There were 109 participants who came from 17 countries Belgium Canada China France Germany Greece India Italy Japan Mexico Netherlands Russia Spain Switzerland the United Kingdom and the United States During a period of two weeks 41 invited lectures and 20 contributed lectures were presented Four lectures by invited speakers were delivered every day followed by two sessions of contributed talks Many informal discussions and working sessions involving small groups were organized by individual participants In addition participants reprints and preprints were displayed through out in a lounge next to the auditorium which further enhanced opportunities for communication and

interaction **Axiomatic, Enriched and Motivic Homotopy Theory** John Greenlees, 2012-12-06 The NATO Advanced Study Institute Axiomatic enriched and motivic homotopy theory took place at the Isaac Newton Institute of Mathematical Sciences Cambridge England during 9-20 September 2002 The Directors were J P C Greenlees and I Zhukov the other organizers were P G Goerss F Morel J F Jardine and V P Snaith The title describes the content well and both the event and the contents of the present volume reflect recent remarkable successes in model categories structured ring spectra and homotopy theory of algebraic geometry The ASI took the form of a series of 15 minicourses and a few extra lectures and was designed to provide background and to bring the participants up to date with developments The present volume is based on a number of the lectures given during the workshop The ASI was the opening workshop of the four month programme New Contexts for Stable Homotopy Theory which explored several themes in greater depth I am grateful to the Isaac Newton Institute for providing such an ideal venue the NATO Science Committee for their funding and to all the speakers at the conference whether or not they were able to contribute to the present volume All contributions were refereed and I thank the authors and referees for their efforts to fit in with the tight schedule Finally I would like to thank my coorganizers and all the staff at the Institute for making the ASI run so smoothly J P C GREENLEES Recent Progress in Intersection Theory Geir Ellingsrud, William Fulton, Angelo Vistoli, 2000-02-25 The articles in this volume are an outgrowth of an International Conference in Intersection Theory that took place in Bologna Italy December 1997 In a somewhat unorthodox format aimed at both the mathematical community as well as summer school students talks were research oriented as well as partly expository There were four series of expository talks by the following people M Brion University of Grenoble on Equivariant Chow groups and applications H Flenner University of Bochum on Joins and intersections E M Friedlander Northwestern University on Intersection products for spaces of algebraic cycles R Laterveer University of Strasbourg on Bigraded Chow cohomology Four introductory papers cover the following topics and bring the reader to the forefront of research 1 the excess intersection algorithm of Stuckrad and Vogel combined with the deformation to the normal cone together with many of its geometric applications 2 new and very important homotopy theory techniques that are now used in intersection theory 3 the Bloch Beilinson filtration and the theory of motives 4 algebraic stacks the modern language of moduli theory Other research articles concern such active fields as stable maps and Gromov Witten invariants deformation theory of complex varieties and others Organizers of the conference were Rudiger Achilles Mirella Manaresi and Angelo Vistoli all from the University of Bologna the scientific committee consisted of Geir Ellingsrud University of Oslo William Fulton University of Michigan at Ann Arbor and Angelo Vistoli The conference was financed by the European Union contract no Lecture Notes on Motivic Cohomology Carlo Mazza, Vladimir Voevodsky, Charles A. Weibel, 2006 The notion of a motive is an elusive one like its namesake the motif of Cezanne's impressionist method of painting Its existence was first suggested by Grothendieck in 1964 as the underlying structure behind the myriad cohomology theories in Algebraic Geometry We now know that there is a

triangulated theory of motives discovered by Vladimir Voevodsky which suffices for the development of a satisfactory Motivic Cohomology theory. However the existence of motives themselves remains conjectural. This book provides an account of the triangulated theory of motives. Its purpose is to introduce Motivic Cohomology to develop its main properties and finally to relate it to other known invariants of algebraic varieties and rings such as Milnor K theory, étale cohomology and Chow groups. The book is divided into lectures grouped in six parts. The first part presents the definition of Motivic Cohomology based upon the notion of presheaves with transfers. Some elementary comparison theorems are given in this part. The theory of étale Nisnevich and Zariski sheaves with transfers is developed in parts two, three and six respectively. The theoretical core of the book is the fourth part presenting the triangulated category of motives. Finally the comparison with higher Chow groups is developed in part five. The lecture notes format is designed for the book to be read by an advanced graduate student or an expert in a related field. The lectures roughly correspond to one hour lectures given by Voevodsky during the course he gave at the Institute for Advanced Study in Princeton on this subject in 1999-2000. In addition many of the original proofs have been simplified and improved so that this book will also be a useful tool for research mathematicians. A1-Algebraic Topology over a Field Fabien Morel, 2012-07-13. This text deals with A1 homotopy theory over a base field k , i.e. with the natural homotopy theory associated to the category of smooth varieties over a field in which the affine line is imposed to be contractible. It is a natural sequel to the foundational paper on A1 homotopy theory written together with V. Voevodsky. Inspired by classical results in algebraic topology, we present new techniques, new results and applications related to the properties and computations of A1 homotopy sheaves, A1 homology sheaves and sheaves with generalized transfers as well as to algebraic vector bundles over affine smooth varieties.

Motives and Algebraic Cycles Rob de Jeu, James Dominic Lewis, 2009. Spencer J. Bloch has and continues to have a profound influence on the subject of Algebraic K-Theory, Cycles and Motives. This book, which is comprised of a number of independent research articles written by leading experts in the field, is dedicated in his honour and gives a snapshot of the current and evolving nature of the subject. Some of the articles are written in an expository style, providing a perspective on the current state of the subject to those wishing to learn more about it. Others are more technical, representing new developments and making them especially interesting to researchers for keeping abreast of recent progress.

Group Cohomology and Algebraic Cycles Burt Totaro, 2014-06-26. This book presents a coherent suite of computational tools for the study of group cohomology, algebraic cycles. [The Bloch-Kato Conjecture for the Riemann Zeta Function](#) John Coates, A. Raghuram, Anupam Saikia, R. Sujatha, 2015-03-13. A graduate level account of an important recent result concerning the Riemann zeta function. [Motivic Integration and its Interactions with Model Theory and Non-Archimedean Geometry: Volume 2](#) Raf Cluckers, Johannes Nicaise, Julien Sebag, 2011-09-22. The development of Maxim Kontsevich's initial ideas on motivic integration has unexpectedly influenced many other areas of

mathematics ranging from the Langlands program over harmonic analysis to non Archimedean analysis singularity theory and birational geometry This book assembles the different theories of motivic integration and their applications for the first time allowing readers to compare different approaches and assess their individual strengths All of the necessary background is provided to make the book accessible to graduate students and researchers from algebraic geometry model theory and number theory Applications in several areas are included so that readers can see motivic integration at work in other domains In a rapidly evolving area of research this book will prove invaluable This second volume discusses various applications of non Archimedean geometry model theory and motivic integration and the interactions between these domains

Regulators José Ignacio Burgos Gil, 2012 This volume contains the proceedings of the Regulators III Conference held from July 12 to July 22 2010 in Barcelona Spain Regulators can be thought of as realizations from motivic cohomology which is very difficult to compute to more computable theories such as Hodge Betti ℓ -adic and Deligne cohomology It is a very intricate subject that thrives on its interaction with algebraic K theory arithmetic geometry number theory motivic cohomology Hodge theory and mathematical physics The articles in this volume are a reflection of the various approaches to this subject such as results on motivic cohomology descriptions of regulators a revisiting of a number of fundamental conjectures such as new results pertaining to the Hodge and standard conjectures and more Mixed Motives Marc Levine, 2025-04-01 This book combines foundational constructions in the theory of motives and results relating motivic cohomology to more explicit constructions Prerequisite for understanding the work is a basic background in algebraic geometry The author constructs and describes a triangulated category of mixed motives over an arbitrary base scheme Most of the classical constructions of cohomology are described in the motivic setting including Chern classes from higher K theory push forward for proper maps Riemann Roch duality as well as an associated motivic homology Borel Moore homology and cohomology with compact supports **Motivic Homotopy Theory** Bjørn Ian Dundas, 2007 This book is based on lectures given at a summer school on motivic homotopy theory at the Sophus Lie Centre in Nordfjordeid Norway in August 2002 Vladimir Voevodsky is one of the founders of the theory and received the Fields medal for his work *New Directions in Homotopy Theory* Nitya Kitchloo, Mona Merling, Jack Morava, Emily Riehl, W. Stephen Wilson, 2018-05-29 This volume contains the proceedings of the Second Mid Atlantic Topology Conference held from March 12 13 2016 at Johns Hopkins University in Baltimore Maryland The focus of the conference and subsequent papers was on applications of innovative methods from homotopy theory in category theory algebraic geometry and related areas emphasizing the work of younger researchers in these fields Stable Homotopy Around the Arf-Kervaire Invariant Victor P. Snaith, 2009-03-28 Were I to take an iron gun And re it o towards the sun I grant twould reach its mark at last But not till many years had passed But should that bullet change its force And to the planets take its course Twould never reach the nearest star Because it is so very far from FACTS by Lewis Carroll 55 Let me begin by describing the two purposes which prompted me to write this monograph

This is a book about algebraic topology and more especially about homotopy theory Since the inception of algebraic topology the study of homotopy classes of continuous maps between spheres has enjoyed a very exceptional central role As is well known for homotopy classes of maps $f: S^n \rightarrow S^n$ with $n \geq 1$ the sole homotopy invariant is the degree which characterises the homotopy class completely The search for a continuous map between spheres of different dimensions and not homotopic to the constant map had to wait for its resolution until the remarkable paper of Heinz Hopf [1] In retrospect finding an example was rather easy because there is a canonical quotient map from S^3 to S^2 the orbit space of the free circle action $S^1 \times CP^1 \rightarrow CP^1$

Featured Reviews in Mathematical Reviews 1997-1999 Donald G. Babbitt, Jane E. Kister, 2000-05-05 This second volume of *Featured Reviews* makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999 Also included are excellent reviews of several classic books and articles published prior to 1970 Among those reviews for example are the following *Homological Algebra* by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild *Faisceaux algébriques cohérents* by Jean Pierre Serre reviewed by C Chevalley and *On the Theory of General Partial Differential Operators* by Lars Hormander reviewed by J L Lions In particular those seeking information on current developments outside their own area of expertise will find the volume very useful By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR

The Geometry of Algebraic Cycles Reza Akhtar, Patrick Brosnan, Roy Joshua, 2010 The subject of algebraic cycles has its roots in the study of divisors extending as far back as the nineteenth century Since then and in particular in recent years algebraic cycles have made a significant impact on many fields of mathematics among them number theory algebraic geometry and mathematical physics The present volume contains articles on all of the above aspects of algebraic cycles It also contains a mixture of both research papers and expository articles so that it would be of interest to both experts and beginners in the field
