Strategies for Sustainable Mobilities Friederike Hülsmann,2016-04-01

Sustainable mobility is a qualitative vague and normative vision. Although this vagueness is often criticized and seen as a drawback, it also allows diverse stakeholders to commit to the goal of sustainable mobility. It allows for consensus which can also help achieve a transport system that enables mobility for current and future generations. The goal of sustainable mobility is an ambitious one and requires a long term and process oriented perspective. With this in mind, this volume examines sustainable mobilities from multiple angles, varying by time, region, cultural and economic backgrounds, local stakeholders and governance structures. By achieving a better understanding of mobility behaviour and mobility needs in different contexts, this book develops innovative strategies and advances modelling approaches which evaluate these strategies. Presented here is not an ideal package of strategies to achieve sustainable mobility, but rather innovations in the different disciplines and fields to show how each of them can contribute to keeping all people mobile today and in the future.

Cycling and Society
Dave Horton, Paul Rosen, Peter Cox, 2016-05-13

How can the social sciences help us to understand the past, present and potential futures of cycling? This timely international and interdisciplinary collection addresses this question, discussing shifts in cycling practices and attitudes and opening up important critical spaces for thinking about the prospects for cycling. The book brings together for the first time analyses of cycling from a wide range of disciplinary backgrounds including history, sociology, geography, planning, engineering and technology. The book redresses the past neglect of cycling as a topic for sustained analysis by treating it as a varied and complex practice which matters greatly to contemporary social, cultural and political theory and action. Cycling and Society demonstrates the incredible diversity of contemporary cycling, both within and across cultures. With cycling increasingly promoted as a solution to numerous social problems across a wide range of policy areas in car dominated societies, this book helps to open up a new field of cycling studies.

Promoting walking and cycling
Pooley, Colin G, 2013-08-21

Why, despite the supposed desirability of cycling and walking, do so many people feel unable or unwilling to incorporate these modes of transport into their everyday journeys? This problem, one of the most pressing questions facing transport planners, has major implications for environmental policy, urban planning and existing social and economic structures. Drawing on original research, the authors reveal the reasons behind our resistance and suggest evidence based policy solutions that could significantly increase levels of walking and cycling. These informed perspectives will enlighten urban planners and policymakers as well as students and scholars of transport and mobility issues.
