Cycling Activism Peter Cox, 2023-07-28 The first full length study of cycling activism through the lens of social movement theory this book demonstrates that despite tremendous differences bike activism can be understood as a continuous and connected activity spanning a century and a half and across continents With examples from street protest to institutional lobbying it emphasises cycling's current central importance to zero carbon transport futures while showing that cycling activism is also not always about the bike or the cyclist as successive generations of activists have used cycling to articulate different visions of freedom and autonomy Moving from a consideration of social movement theory as a means to understand cycling activism the author presents a series of case studies of collective action organisations networks and campaigns in order to illustrate and elaborate a theoretical model through which diverse campaigns and approaches to change can be understood As such Cycling Activism will appeal to those with interests in mobilisation for social change mobility and transport studies and social movement theory as well as cycling studies *Carbon Cycle in the Changing Arid Land of China* Xiujun Wang, Zhitong Yu, Jiaping Wang, Juan Zhang, 2018-03-05 This book integrates the analyses of organic carbon and carbonate accumulation in soil and lake sediment in a typical arid region of China that has experienced significant climate and land use changes It demonstrates that carbonate accumulation greatly exceeds organic carbon in both soil and sediment It also shows that intensive cropping with sound land management in the arid land not only increases soil organic carbon stock but also enhances accumulation of soil carbonate particularly in subsoils Carbon accumulation in the lake sediment increased between 1950 and 2000 after which it declined and the authors explore how human activity and climate change may have caused the changes in carbon burial in the lake sediment This book is of interest to researchers in a number of fields such as soil science limnology and global change as well as to the policy makers *Radionuclides in the Environment* David A. Atwood, 2013-02-19 Nuclear energy is the one energy source that could meet the world's growing energy needs and provide a smooth transition from fossil fuels to renewable energy in the coming decades and centuries It is becoming

abundantly clear that an increase in nuclear energy capacity will and probably must take place. However, nuclear energy and the use of radionuclides for civilian and military purposes lead to extremely long-lived waste that is costly and highly problematic to deal with. Therefore, it is critically important to understand the environmental implications of radionuclides for ecosystems and human health if nuclear energy is to be used to avoid the impending global energy crisis. The present volume of the EIC Books series addresses this critical need by providing fundamental information on environmentally significant radionuclides. The content of this book was developed in collaboration with many of the authors of the chapters. Given the enormity of the subject, the Editor and the Authors had to be judicious in selecting the chapters that would appropriately encompass and describe the primary topics, particularly those that are of importance to the health of ecosystems and humans. The resulting chapters were chosen to provide this information in a book of useful and appropriate length. Each chapter provides fundamental information on the chemistry of the radionuclides, their occurrence and movement in the environment, separation and analyses, and the technologies needed for their remediation and mitigation. The chapters are structured with a common systematic format in order to facilitate comparisons between elements and groups of elements.

About EIC Books: The Encyclopedia of Inorganic Chemistry (EIC) has proved to be one of the defining standards in inorganic chemistry, and most chemistry libraries around the world have access either to the first or second print edition or to the online version. Many readers, however, prefer to have more concise thematic volumes targeted to their specific area of interest. This feedback from EIC readers has encouraged the Editors to plan a series of EIC Books focusing on topics of current interest. They will appear on a regular basis and will feature leading scholars in their fields. Like the Encyclopedia, EIC Books aims to provide both the starting research student and the confirmed research worker with a critical distillation of the leading concepts in inorganic and bioinorganic chemistry and provide a structured entry into the fields covered. This volume is also available as part of the Encyclopedia of Inorganic Chemistry 5 Volume Set. This set combines all volumes published as EIC Books from 2007 to 2010, representing areas of key developments in the field of inorganic chemistry published in the Encyclopedia of Inorganic Chemistry. Zepp,Ch. Sonntag,1995-07-11 Nonliving organic matter NLOM comprises the bulk of the organic carbon stored in the terrestrial biosphere and a major part of the organic carbon in the sea Organic substances which include litter marine detritus dissolved organic matter and soil organic matter have diverse effects on the Earth s biogeochemical processes and

serve as a major reservoir of biospheric carbon which can be transformed to carbon dioxide methane and other greenhouse gases Given this broad spectrum of effects efforts to adapt to or perhaps benefit from global change require a better understanding and an ability to predict the role of NLOM in the global environment The overall objective of this volume is to provide experimental and modeling strategies for the assessment of the sensitivity of the global carbon cycle to changes in nonliving organic pools in terrestrial and aquatic ecosystems The discussions in this volume consider how best to characterize and quantify pools and fluxes of NLOM the role of NLOM cycling on a global scale human and climatic perturbations of interactions between NLOM and nutrients and biological chemical and physical processes that control the production and degradation of NLOM with an emphasis on processes that affect the persistence of NLOM in the environment One of the most unique aspects of this volume is that it represents extensive exchanges between leading international scientists from both aquatic and terrestrial backgrounds It will be of particular interest to organic geochemists microbiologists ecologists soil scientists agricultural scientists marine chemists limnologists and modelers Goal of this Dahlem Workshop to devise experimental and modeling strategies for assessment of the sensitivity of the global carbon cycle to changes in nonliving organic pools
