Giuliano, 1992 Provides discussions on recent advances in the cycloaddition chemistry of carbohydrates including inter and intramolecular Diels Alder reactions dipolar addition reactions and the use of carbohydrate derived chiral auxiliaries Includes applications to the synthesis of natural products and examines the stereochemical aspects of cycloaddition processes Emphasizes the use of carbohydrate derived substrates in cycloaddition reactions Valuable reading for anyone interested in the synthetic organic chemistry of carbohydrates

Heterocycles from Carbohydrate Precursors El Sayed H. El Ashry, 2007-06-27 This book is a volume in the series Topics in Heterocyclic Chemistry It covers the key methods used for designing synthetic approaches to heterocycles from carbohydrates and the value and scope of these methods Carbohydrates are widely distributed in nature and constitute the largest part of renewable biomasses Moreover many carbohydrates and their derivatives are commercially available at relatively cheap prices Consequently their utilization is highly encouraged and economically they are of great significance Moreover carbohydrates are highly functionalized compounds that can be readily derivatized and or cyclized to provide heterocyclic compounds This book provides a modern account and an up to date description of the advancement in the synthesis of diverse heterocycles from carbohydrates Carbohydrates can be considered as a source of chiral centers in addition to the variable modification thereof Herein the elaboration of the carbohydrate molecules for providing different heterocycles is the main objective and team efforts from leaders of the topics has been gathered in this volume This book is designed to be suitable for students and researchers It is highly recommended as a reference book and for teaching the fascinating topics related to carbohydrates heterocycles and organic synthesis In addition to its importance in academia it is also an excellent source for information about the variety of methods used in the synthesis of heterocycles important to industry
