Cytokines As Potential Therapeutic Targets For Inflammatory Skin Diseases:

Cytokines as Potential Therapeutic Targets for Inflammatory Skin Diseases R. Numerof, Charles A.

Dinareello, Khusru Asadullah, 2007-01-19 Cytokines and cytokine receptors remain an area of great interest for the development of targeted therapies for cutaneous inflammatory diseases Anti TNF therapeutics have proven to be effective in the treatment of psoriasis and clinical investigations have now begun for other cytokine directed therapies such as those targeting IFN γ IL 12p40 and IL 18 In addition to therapeutics that target cytokines directly strategies that target cytokine signaling pathways are in development This book summarizes the findings of the 56th International Workshop of the Ernst Schering Research Foundation that focused on Cytokines as Potential Therapeutic Targets for Inflammatory Skin Diseases

Targeting Human Inflammatory Skin Diseases With Natural Products: Exploring Potential Mechanisms and Regulatory Pathways Bey Hing Goh, Andrei Mocan, Jianbo Xiao, Wei Hsum Yap, Siau Hui Mah, 2022-01-07 [TNF-alpha Inhibitors](#)

Jeffrey M. Weinberg, Robin Buchholz, 2006-08-08 Over the last decade the advent of biologic agents has greatly revolutionized therapeutic medicine in the management of chronic inflammatory diseases such as rheumatoid arthritis Crohn's disease and psoriasis Elucidation of the complex web of cytokine network and the roles of these cytokines in the pathogenesis of inflammatory disorders provided one of the key catalysts for the advancement of targeted biologic therapy in autoimmune and inflammatory diseases TNF is known to play a crucial role in the pathogenesis of many chronic inflammatory diseases Elevated levels of TNF have been demonstrated in Crohn's disease psoriasis psoriatic arthritis and rheumatoid arthritis suggesting a role for TNF in their pathogenesis Although TNF plays a critical role in the activation of innate and acquired immune responses the persistence of the immune response and inappropriate production of TNF can produce pathological changes resulting from chronic inflammation and tissue damage The purpose of this volume is to provide a comprehensive overview of the development pharmacology efficacy and safety of the currently available TNF inhibitors etanercept infliximab and adalimumab The initial three chapters of the volume provide a background on the field on TNF and its inhibition Chapter 1 provides an introduction to TNF and reviews the pathophysiology of this cytokine Chapter 2 then presents the history of the development of TNF inhibitors The pharmacology of these agents is reviewed in Chapter 3 *Immune Regulations of Inflammatory Skin Diseases* Chun-Bing Chen, Wen-Hung Chung, Haur Yueh Lee, Riichiro Abe, 2024-10-14 Skin is our primary interface with the environment and T cells are crucial for orchestrating host immune responses against pathogenic microorganisms Dysregulated immune responses on the other hand can result in chronic inflammatory skin diseases The complex regulatory networks include effector T cells memory T cells regulatory T cells immunoregulatory co signaling molecules and cytokines that control skin immunity and the mechanisms that regulate skin immune responses in host defense and in immune mediated cutaneous diseases The immune regulatory networks are involved in the common inflammatory skin diseases including psoriasis atopic dermatitis alopecia areata vitiligo bullous diseases and cutaneous adverse drug reaction

The goal of this Research Topic is to provide a forum to advance research on the contribution of skin inflammation to the genesis and development of the skin diseases as well as to explore innovative skin oriented pharmacological interventions mainly on the immune regulatory networks in the attempt to achieve a beneficial impact on the skin disease course Skin Autoimmunity Ralf J. Raff, 2007-05-24 This volume contains an advanced level discussion on the appropriateness of hormone replacement therapy HRT in modern postmenopausal women on the basis of evidence provided by recent epidemiological studies It addresses all aspects of benefits and risks associated with HRT It focuses however on cancer risk and on risk of breast cancer in particular The book advocates further epidemiological studies which incorporate pathobiological assessments Crosstalk: Skin Cells and Immune Cells in Inflammatory Skin Diseases Jeong Eun Kim, Hyun Je Kim, Kazuhiko Yamamura, 2024-09-11 The skin is the human body's largest organ consisting of two layers epidermis and dermis and appendages hair and sweat glands The skin not only wraps the body but also protects it from external stimuli and infection perceives sensations such as pain and itch and coordinates with various circulating immune cells for immune response regulation Recent studies have shown that inflammatory skin diseases including psoriasis and atopic dermatitis harbor systemic inflammation immune abnormalities such as strong Th activation and expansion of specific immune cell subsets Novel biologics and small molecule inhibitors targeting specific biomarkers and immune signals are much more effective and safer than conventional systemic therapies for these skin diseases Comprehensive Insights into Erythrodermic Psoriasis: From Pathogenesis to Precision Therapies Dr. Spineanu Eugenia, 2025-03-12 Dive into the intricate world of Erythrodermic Psoriasis with our comprehensive treatise Explore the genetic immunological and environmental factors shaping this severe skin condition's pathogenesis From the latest advancements in understanding its underlying mechanisms to novel therapeutic targets our treatise offers invaluable insights Discover precision medicine approaches tailored to individual patients harnessing genetic profiling and biomarker identification for optimized treatment outcomes Whether you're a medical professional seeking in-depth knowledge or a patient navigating treatment options our treatise provides a holistic understanding of Erythrodermic Psoriasis Gain access to cutting edge research innovative therapies and practical strategies for managing this complex dermatological condition Unravel the complexities of Erythrodermic Psoriasis and embark on a journey towards precision care with our insightful treatise *Macrophages Role in Integrating Tissue Signals and Biological Processes in Chronic Inflammation and Fibrosis* Tarcio Teodoro Braga, Ivan C. Moura, Ana Paula Lepique, Niels Olsen Saraiva Camara, 2017-10-13 Macrophages comprehend a heterogeneous mononuclear phagocytic population with wide range phenotypes and roles in homeostasis maintenance and diseases such as infections autoimmunity and cancer Technology improvements enable researchers to track different macrophage populations in different tissues and

situations and hypothesize on their role in promoting inflammation or stimulating tissue repair Through innate immune recognition system macrophages can launch several effector artillery that culminate in the production of various types of inflammatory mediators as cytokines chemokines lipid mediators and oxygen reactive species which in turn influence the behavior of other cells Furthermore macrophages and interacting cells are also susceptible to metabolic changes that ultimately will define the outcome macrophage signaling and its effect in the tissue Here we present a concise series of discussions on the role of macrophages its response to the microenvironment and effects on other cells during tissue injury and repair Triggering of inflammasome in macrophage activation and function is of special interest in this issue We will emphasize the role of different macrophage subpopulations and the plasticity of these cells during fibrotic process in different models of diseases , Phospholipases in Physiology and Pathology Sajal Chakraborti,2023-08-17

Phospholipases in Physiology and Pathology presents a comprehensive overview on the physiology and pathology of phospholipases This seven volume set considers the biochemical and molecular mechanisms of normal and abnormal cell function upon dysregulation of phospholipases in different diseases Volumes cover signal transduction mechanisms implications in cancer infectious diseases neural diseases cardiovascular diseases and other diseases implications in inflammation apoptosis gene expression and non coding RNAs the role of natural and synthetic compounds and stem cell therapies nanotechnology based therapies and more Together these volumes give researchers critical insight on the mechanistic and therapeutic aspects of phospholipases Discusses the biochemical and molecular mechanisms of normal and abnormal cell function in different disease processes Covers a wide range of basic and translational research appropriate for scientists engaged in studying the regulation of phospholipases from interdisciplinary perspectives Features state of the art chapter contributions from international leaders in the field **Jak-Inhibitors in Dermatology** Ümit Türsen,Ayşe Serap Karadağ,2025-05-05 This book covers the clinical usage of JAK inhibitors which target Janus kinases and have shown promising results in the treatment of various dermatologic conditions including atopic dermatitis psoriasis vitiligo connective tissue disorders autoimmune bullous diseases and alopecia areata It is likely that JAK inhibitors will continue to play an important role in the management of these conditions with clinical trials ongoing to assess their safety and efficacy in the treatment of other dermatologic disorders such as vitiligo and hidradenitis suppurativa However it is important to note that JAK inhibitors can have potential side effects including increased risk of infections anemia and thrombosis Therefore careful monitoring of patients receiving JAK inhibitors is necessary to ensure their safety Jak Inhibitors in Dermatology represents a treatise on this novel topic and discusses that while JAK inhibitors have shown great promise in the treatment of various dermatologic conditions further research and monitoring is necessary to fully understand their potential benefits and risks This book is therefore of great interest for all dermatologists as a first step to understanding this novel treatment
