The Origins of Health and Disease Michael E. Hyland, 2011-04-21 Some phenomena in medicine and psychology remain unexplained by current theory Chronic fatigue syndrome repetitive strain injury and irritable bowel syndrome for example are all diseases or syndromes that cannot be explained in terms of a physiological abnormality In this intriguing book Michael E Hyland proposes that there is a currently unrecognised type of illness which he calls dysregulatory disease Hyland shows how such diseases develop and how the communication and art of medicine good nursing care complementary medicine and psychotherapy can all act to reduce the dysregulation that leads to dysregulatory disease The Origins of Health and Disease is a fascinating book that develops a novel theory for understanding health and disease and demonstrates how this theory is supported by existing data and how it explains currently unexplained phenomena Hyland also shows how his theory leads to new testable predictions that in turn will lead to further scientific advancement and development

Cytokine Frontiers Takayuki Yoshimoto, Tomohiro Yoshimoto, 2013-10-28 This book guides the reader through the latest research on the cytokine network covering signaling pathways control of the immune response and potential therapeutics Different cytokines stimulate diverse responses in various phases of inflammation and immunity including the innate immune response the generation of effector T cells and the development of antibodies by the humoral immune system It is now clear that the pathophysiology of many infectious autoimmune allergic and malignant diseases can be largely explained by which cytokines are induced and subsequently regulate the cellular responses In clinical medicine cytokines are involved in a wide spectrum of diseases This book describes in three parts the properties and roles of 15 key cytokines under physiological and pathological conditions Part I presents nine cytokines associated with inflammatory disorders pro inflammatory cytokines and the recently identified new helper T Th subset Th17 cells Part II gives details of three cytokines associated with allergic disorders including Th2 responses and recently identified types of innate cells Part III describes three cytokines that are associated with immunological tolerance and anti inflammation including regulatory T Treg cells IL 10 producing Treg Tr1 cells and inducible IL 35 producing Treg iTr35 cells Cytokines are considered to be important as therapeutic targets for specific agonists or antagonists in numerous immune and inflammatory diseases The ultimate goal of this book is to facilitate the development of therapeutic treatments for such diseases which has been limited
