Normal and Malignant Liver Cell Growth W.E. Fleig, 1998-12-31 Although cell turnover in normal adult liver is extremely low hepatic tissue is notorious for its almost infinite capacity to regenerate in cases of viral toxic or traumatic damage Hepatocellular carcinoma is one of the most frequent malignancies worldwide and causes more than a million deaths per year The mechanisms governing normal proliferation and malignant transformation of liver cells are of utmost interest for the understanding of regeneration and hepatocarcinogenesis and for the development of new therapeutic strategies Therefore the International Falk Workshop held in Halle Germany on January 29 30 1998 focused on the issues of normal and malignant liver cell growth Knowledge in this area of research has expanded rapidly during recent years This book of proceedings summarizes the latest advances both in basic science and clinical research Stimulating discussion set the basis for the development of new strategies in diagnosis and treatment of hepatocellular carcinoma and for the manipulation of regeneration in cases of acute or chronic loss of functional liver tissue Cytokines: Advances in Research and Application: 2011 Edition, 2012-01-09 Cytokines Advances in Research and Application 2011 Edition is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Cytokines The editors have built Cytokines Advances in Research and Application 2011 Edition on the vast information databases of ScholarlyNews You can expect the information about Cytokines in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Cytokines Advances in Research and Application 2011 Edition has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com> **MIF Family Cytokines in Innate Immunity and Homeostasis** Richard Bucala, Jürgen Bernhagen, 2017-06-12 The role of the cytokine macrophage migration inhibitory factor MIF in the immune response and in the immunopathogenesis of different inflammatory autoimmune and infectious disorders is now well

Regulation of Inflammation, Its Resolution and Therapeutic Targeting Mariagrazia Uguccioni, Mauro Martins Teixeira, Massimo Locati, Alberto Mantovani, 2018-01-11

Inflammation is a fundamental protective mechanism and at the same time the driving force of a variety of major diseases in humans. Indeed, acute self-resolving inflammation usually plays a positive role for the host as exemplified by infectious diseases where its positive role is well established and testified by its perception as innate immunity. On the other hand, non-resolving inflammation and consequent chronicization is a key determinant of immunopathology and clinical manifestations of most major diseases in humans. As a consequence, it is increasingly appreciated that the problem with inflammation is not how often it starts but how often it fails to resolve. Appropriate resolution of inflammatory responses, which also drives activation of tissue damage repair mechanisms and return of local tissues to homeostasis, is a necessary process for ongoing health. Interestingly, cells sustaining these processes are also key to the proinflammatory responses and the underlying pro-resolving molecular pathways are triggered as part of the proinflammatory response. This clearly indicates resolution of inflammation as an active process requiring functional repolarization of inflammatory cells that calls our attention on the underlying molecular mechanisms. The increasing number of anti-inflammatory drugs, best sellers in the pharma market, is a clear indication of the relevance of having inflammation under check; nonetheless, there is still a great need for better acting pharmacological tools for the control of inflammation. Indeed, the remarkable success of biological drugs targeting proinflammatory cytokines has indicated that tools able to block proinflammatory mediators have promising applications, but at the same time has made clear that there are intrinsic limitations to this approach which frequently vanish and undermine the activity of single targeting drugs, including the well-known redundancy of inflammatory mediators. Under self-limiting conditions, inflammation spontaneously resolves in an active process. Some cellular and molecular mechanisms involved in inflammation resolution have been uncovered in the recent past and include generation of specific cytokines, apoptosis of inflammatory leukocytes, lipid mediators, macrophage repolarization, and others are likely to be revealed in the next future, since loss of function mutations of an increasing number of genes results in the development of spontaneous inflammation in experimental animals. We argue that pushing for inflammation resolution by exploiting active, naturally occurring pro-resolving processes may have significant advantages over the attempt to simply push back inflammation by passive blockade of proinflammatory mediators. At present, the research in the field of inflammation aims at identifying and validating new molecules involved in the resolution of inflammation as a basis for the development of innovative therapeutic strategies in chronic inflammatory and autoimmune diseases. This involves the discovery of new natural or synthetic pro-resolving molecules from plant and animals and the investigation of endogenous inflammation pro-resolving mechanisms, including atypical chemokine receptors, decoy receptors, and microRNA. An extensive effort is focused on the regulation by pro-resolving

agents on two molecular systems of key relevance in inflammation the chemokine system which regulates recruitment permanence and egress of leukocyte in tissues and the Toll Like Receptor TLR IL 1R system which is central for the activation of infiltrating leukocytes Aspects of Dioxin Hepatotoxicity are Mediated by Macrophages and Cytokines Kalyan Pande,2006 **Liver Immunology** M. Eric Gershwin,John M. Vierling,Atsushi Tanaka,Michael P. Manns,2020-11-03 The third edition of this acclaimed work provides clinicians and investigators with a wealth of state of the art information that will lead to fresh approaches in thinking about liver physiology and liver diseases Developed by a panel of renowned international authors this edition outlines a range of important advances in our understanding of the liver s role as an immune organ and the functions of innate and adaptive immunity in the pathogenesis of all liver diseases Indeed the liver is a vitally important immune organ producing liver derived products that can trigger the innate and adaptive immune system to initiate mediate regulate and resolve systemic inflammation The book begins with an analysis of the core concepts of immunology including the definition of autoimmunity and its unique application to the liver a tolerogenic organ Subsequent chapters then explore the biological elements of liver diseases caused by epigenetics genetics and innate and adaptive immunity Specific clinical presentations and aspects of liver diseases are also examined such as Hepatitis C non alcoholic fatty liver disease and parasitic infections Closing chapters then discuss liver diseases among specific populations including pediatrics those with comorbidities and preexisting conditions pregnant women and finally patients with transplanted organs A timely and invaluable update to the clinical literature *Liver Immunology Principles and Practice Third Edition* is once again a comprehensive work that will not only enhance the understanding of liver diseases but also provide the kind of novel insights that greatly accelerates the evidence based care of children and adults afflicted with these diseases This volume is again a must read for clinicians at all levels for investigators and for students *Double-Edged Swords: Important Factors Connecting Metabolic Disorders and Cancer Development - From Basic Research to Translational Applications, volume II* Che-Pei Kung,Conghui Yao,Maureen Murphy,Thibaut Barnoud,Irene Bertolini,2024-12-30 The relationship between metabolic dysfunctions and cancer development has been continuously evolving informed by research efforts in the fields of epidemiology endocrinology cancer biology chemistry genomics metabolomics among others Metabolism and cancer can intersect at the physiological level where metabolic disorders and cancer malignancies occur as comorbid or mutually promoting conditions or at the molecular level where metabolic alterations regulate tumorigenesis and oncogenic tumor suppressive pathways govern the onset of metabolic syndromes The increasingly complex spider web connecting metabolic dysfunctions and cancer development reveals both distinctive and shared mechanisms underlying different disease indications It also points to unique opportunities either through repurposing existing tools or discovering new strategies to develop targeted therapies against a wide variety of metabolic and cancerous diseases In our previous Research Topic *Double edged Swords Genetic Factors That Influence The Pathogenesis of Both Metabolic Disease and Cancer* we highlighted

ten genetic factors mechanisms that influence the pathogenesis of both metabolic disease and cancer The attention it generated to date 110 000 article views 22 000 article downloads 500 citations signals a fast growing interest from scientific communities of different disciplines We aim to highlight more recent advances to inform a diverse audience working on basic and translational research
