Cytokinesis in Animal Cells R. Rappaport, 1996-10-28 This book traces the history of the major ideas and gives an account of our current knowledge of cytokinesis

Cytokinesis in Animal Cells R. Rappaport, 2005-09-08 This book traces the history of some of the major ideas in the field and gives an account of our current knowledge of animal cytokinesis It contains descriptions of division in different kinds of cells and the proposed explanations of the mechanisms underlying the visible events The author also describes and explains experiments devised to test cell division theories The forces necessary for cytokinesis now appear to originate from the interaction of linear polymers and motor molecules that have roles in force production motion and shape change that occur in other phases of the biology of the cell The localization of the force producing mechanism to a restricted linear part of the subsurface is caused by the mitotic apparatus the same cytoskeletal structure that insures orderly mitosis

Membrane Dynamics and Calcium Signaling Joachim Krebs, 2018-03-28 This book describes the newest discoveries on calcium signaling happening at the cellular and intracellular membranes often exerted in so called microdomains Calcium entry and release its interaction with proteins and resulting events on proteins and organelles are comprehensively depicted by leading experts in the field Knowledge about details of these highly dynamic processes rapidly increased in recent years the book therefore provides a timely summary on the processes of calcium signaling and related membrane dynamics it is aimed at students and researchers in biochemistry and cell biology

Mechanisms of Cytokinesis in Eukaryotes Issei Mabuchi, Fred Chang, Maria Grazia Giansanti, 2021-05-11

The Neural Crest Nicole Le Douarin, Chaya Kalcheim, 1999-11-28 This 1999 edition of The Neural Crest contains comprehensive information about the neural crest a structure unique to the vertebrate embryo which has only a transient existence in early embryonic life The ontogeny of the neural crest embodies the most important issues in developmental biology as the neural crest is considered to have played a crucial role in evolution of the vertebrate phylum Data that analyse neural crest ontogeny in murine and zebrafish embryos have been included in this revision This revised edition also takes advantage of recent advances in our understanding of markers of neural crest cell subpopulations and a full chapter is now devoted to cell lineage analysis The major research breakthrough since the first edition has been the introduction of molecular biology to neural crest research enabling an elucidation of many molecular mechanisms of neural crest development This book is essential reading for students and researchers in developmental biology cell biology and neuroscience

Hormones, Signals and Target Cells in Plant Development Daphne J. Osborne, Michael T. McManus, 2005-04-11 Meristematic cells in plants become the many different types of cells found in a mature plant This is achieved by a selective response to chemical signals both from neighbouring cells and distant tissues It is these responses that shape the plant its time of flowering the sex of its flowers its length of survival or progress to senescence and death How do plants achieve this This treatise addresses this question using well chosen examples to illustrate the concept of target cells The authors discuss how each cell has the ability

to discriminate between different chemical signals determining which it will respond to and which it will ignore The regulation of gene expression through signal perception and signal transduction is at the core of this selectivity and the Target Cell concept This volume will serve as a valuable reference for all researchers working in the field of plant developmental biology *Gravity and the Behavior of Unicellular Organisms* Donat-Peter Häder, Ruth Hemmersbach, Michael Lebert, 2005-01-17 Unicellular organisms use gravity as an environmental guide to reach and stay in regions optimal for their growth and reproduction These single cells play a significant role in food webs and these factors together make the effects of gravity on unicellular organisms a fascinating and important subject for scientific study In addition they present valuable model systems for studying the mechanisms of gravity perception a topic of increasing interest in these days of experimentation in space This book reveals how single cells achieve the same sensoric capacity as multicellular organisms like plants or animals It reviews the field discussing the historical background ecological significance and related physiology of unicellular organisms as well as various experimental techniques and models with which to study them Those working on the biology of unicellular organisms as well as in related areas of gravitational and space science will find this book of value **Fungal Morphogenesis** David Moore, 1998 Fungal Morphogenesis brings together for the first time the full scope of fungal developmental biology **Marine Physiology Down East: The Story of the Mt. Desert Island Biological Laboratory** David H. Evans, 2015-08-13 This volume offers a comprehensive history of the Mount Desert Island Biological Laboratory MDIBL one of the major marine laboratories in the United States and a leader in using marine organisms to study fundamental physiological concepts Beginning with its founding as the Harpswell Laboratory of Tufts University in 1898 David H Evans follows its evolution from a teaching facility to a research center for distinguished renal and epithelial physiologists He also describes how it became the site of major advances in cytokinesis regeneration cardiac and vascular physiology hepatic physiology endocrinology and toxicology as well as studies of the comparative physiology of marine organisms Fundamental physiological concepts in the context of the discoveries made at the MDIBL are explained and the social and administrative history of this renowned facility is described Volvox David L. Kirk, 1998 This book reviews Volvox development and biology and through this study sheds light on the origins of multicellularity

Dictyostelium Richard H. Kessin, 2001-01-11 Dictyostelia are soil amoebae capable of extraordinary feats of survival motility chemotaxis and development Characterised by their ability to transform from a single celled organism into an elaborate assemblage of thousands of synchronously moving cells Dictyostelids are often referred to as social amoebae and have been the subjects of serious study since the 1930s Research in this area has been instrumental in understanding many problems in cellular biology Beginning with the history of Dictyostelids and discussing each stage of their development this book considers the evolution of this unique organism analyses the special properties of the Dictyostelid genome and presents in detail the methods available at the time of the book's original publication in 2001 to manipulate their genes Representing

the synthesis of such material and with an emphasis on combining classical experiments with modern molecular findings this book will be essential for researchers and graduates in developmental and cellular biology **Cell Biology E-Book** Thomas D.
