O'Rand, 2013-06-29 In 1964 the Fertilization and Gamete Physiology Research Training Program FERGAP was established at the Marine Biological Laboratories Woods Hole Massachusetts Over the course of the next 12 years under the directorship of Dr Charles B Metz FERGAP brought together trained and inspired a generation of students in reproductive biology from all over the world As students of C B Metz and as FERGAP trainees we would like to dedicate this collected work on comparative mammalian fertilization to our teacher and mentor Dr Charles B Metz Like a number of authors contributing to this volume we have been struck by the significant impact that C B Metz and FERGAP had on the development of students of reproductive biology Applying both the classical and molecular techniques of cell biology and immunology to problems of gamete biology Dr Metz emphasized a comparative and analytical approach that was reflected in his own research on fertilization in Paramecia sea urchins frogs and mammals It is hoped that this volume will serve to stimulate students to discover the myriad of fascinating research problems in gamete and reproductive biology Bonnie S Dunbar Michael G O Rand Houston Texas Chapel Hill North Carolina ix Contents Part I COMPARATIVE OVERVIEW OF MAMMALIAN GAMETES The Coevolution of Mammalian Gametes 3 J Michael Bedford I Introduction 3 2 Gamete Design 4 2 1 Monotremes 5 2 2 Marsupials 5 2 3 Eutherians 9 3 Gamete Maturation 14 3 1 Oocyte Maturation 14 3 2 Sperm Maturation in the Male 15 *The Biology of Tooth Movement* Louis A. Norton, Charles J. Burstone, 1988-11-30 Written by a broad spectrum of dental medical and basic science researchers from around the world this book presents state of the art knowledge concerning the biology of connective tissues and their response to exogenous mechanical stimulation at the cell biology level The text goes well beyond the traditional morphologic descriptions of tooth movement covering the cell biology of the connective tissues involved the various in vitro and in vivo research models possible pharmacological means of influencing tissue responses and biophysical considerations Many cellular events that occur during tooth movement are discussed as well as the exciting challenges unanswered questions and possibilities in the future This publication is extremely relevant to the work of dental specialists in orthodontics pediatric dentistry and periodontics plus orthopedists and basic scientists working in connective tissue research *Monoclonal Antibodies and Functional Cell Lines* Roger H. Kennett, 2013-03-08 This volume serves as a follow up to our previous book *Monoclonal Antibodies Hybridomas A New Dimension in Biological Analyses* We continue the theme of monoclonal antibodies and their applications attempting to cover some of the areas not covered in the previous volume We again include an appendix describing methods useful to those who are beginning to apply these techniques in their own laboratories This volume will be followed by another concentrating on the combination of monoclonal antibody techniques with molecular genetic techniques to study structure function relationships at the level of both the gene and gene product Roger H Kennett

The Cytoskeleton Manfred Schliwa, 2012-12-06 The term cytoskeleton has become firmly established in today's scientific vocabulary Indeed it is difficult to believe that only ten years ago it was virtually non-existent Since then the modern field of research on the structural organization of the cytoplasm has turned into one of the most productive and rapidly expanding research areas in Cell Biology today Considerable progress has been made towards the identification of the various structural components of the cytoskeleton and their interactions with one another and with membranes The first attempts to understand in molecular terms complex cellular processes such as shape changes locomotion division and organelle movements have been made And it is now apparent that the cytoskeleton has impact on other biological processes such as the control of gene expression protein synthesis cell cycle regulation and development This monograph outlines the basic properties of the major components of the polymeric filament networks and their interactions and associations Wherever possible emphasis is placed on more recent references Any attempt to cover a research field this complex in an introductory monograph is by necessity fragmentary and oversights or omissions are inevitable I wish to apologize in advance to all those colleagues who feel that their work is not adequately represented

Biomechanics of Cell Division Nuri Akkas, 2013-03-09 There are virtually hundreds of life scientists publishing hundreds of papers a year on numerous aspects of the cell cycle The following are few of the topics covered cell membrane organization membrane components cytoskeleton and associated proteins cell motility actin in dividing cells surface modulating assemblies microfilaments microtubules cleavage furrow fusion etc In all these topics life scientists talk about among others the forces within the system the motion within the system and the failure of the system The concepts of force motion and failure are one way or another all related to the structure of the cell and to the mechanics of the cell activities When the concepts of mechanics and structure enter the problem then one has to talk about biomechanics in this case biomechanics of cytology which we would like to call Cytomechanics However a review of the journals books and conference proceedings related to various aspects of cytology reveals that mechanicians have not yet entered the field of cytology at a noticeable level Some life scientists have indeed made use of the general principles of

mechanics in their works however no truly interdisciplinary publication has yet appeared from the collaboration of mechanicians and lifescientists in the field of for instance cell division

The Enzymes of Biological Membranes A.N. Martonosi, 2012-12-06 In the first edition of *The Enzymes of Biological Membranes* published in four volumes in 1976 we collected the mass of widely scattered information on membrane linked enzymes and metabolic processes up to about 1975 This was a period of transition from the romantic phase of membrane biochemistry preoccupied with conceptual developments and the general properties of membranes to an era of mounting interest in the specific properties of membrane linked enzymes analyzed from the viewpoints of modern enzymology The level of sophistication in various areas of membrane research varied widely the structures of cytochrome c and cytochrome b5 were known to atomic detail while the majority of membrane linked enzymes had not even been isolated In the intervening eight years our knowledge of membrane linked enzymes expanded beyond the wildest expectations The purpose of the second edition of *The Enzymes of Biological Membranes* is to record these developments The first volume describes the physical and chemical techniques used in the analysis of the structure and dynamics of biological membranes In the second volume the enzymes and metabolic systems that participate in the biosynthesis of cell and membrane components are discussed The third and fourth volumes review recent developments in active transport oxidative phosphorylation and photosynthesis

Biosynthesis and Biodegradation of Cellulose Candace H. Haigler, 1990-12-20 A gathering of articles bringing together knowledge of both the synthesis and degradation of a pervasive biological substance cellulose Topics include native cellulose particle rosettes and terminal globules microfibril biogenesis synthesis in *Acetobacter xylinum* biodegradation measurement

Epithelial Organization and Development T.P. Fleming, 2012-12-06 Epithelia are one of the commonest tissue types in the animal kingdom Chapters from leading scientists in the major international research laboratories use examples from different systems to illustrate the form and function of epithelia An important theme is the way in which epithelial cells differentiate to specialized tissue reversal of this process occurs when cells become tumorigenic

Calpains K K W Wang, Po-wai Yuen, 1999-06-17 This new edition offers a clear and thorough examination of the most recent results of thirty years of research on calcium activated neutral protease CANP or Calpain Coverage includes the implications of the recently gained ability to produce functionally active recombinant calpain in various human disorders such as cerebral ischemia traumatic brain and spinal cord injury cataract formation myocardial infarction and Alzheimer's disease The resulting research to find more selective calpain inhibitors is also discussed With a copy of *Calpain Pharmacology and Toxicology of Calcium Dependent Protease* you will better understand why the calpain research area is such an exciting and promising one
