Shakespeare, Objects and Phenomenology Susan Sachon, 2019-12-24 This book explores ways in which Shakespeare's writing strategies shape our embodied perception of objects both real and imaginary in four of his plays Taking the reader on a series of perceptual journeys it engages in an exciting dialogue between the disciplines of phenomenology cognitive studies historicist research and modern acting techniques in order to probe our sentient and intuitive responses to Shakespeare's language What happens when we encounter objects on page and stage and how we can imagine that impact in performance What influences might have shaped the language that created them and what do they reveal about our response to what we see and hear By placing objects under the phenomenological lens and scrutinising them as vital conduits between lived experience and language this book illuminates Shakespeare's writing as a rich source for investigation into the way we think feel and communicate as embodied beings **Mind in Everyday Life and Cognitive Science** Sunny Y.

Auyang, 2001-03-15 Sunny Auyang tackles what she calls the large pictures of the human mind exploring the relevance of cognitive science findings to everyday mental life Auyang proposes a model of an open mind emerging from the self organization of infrastructures which she opposes to prevalent models that treat mind as a disembodied brain or computer subject to the control of external agents such as neuroscientists and programmers Although cognitive science has obtained abundant data on neural and computational processes it barely explains such ordinary experiences as recognizing faces feeling pain or remembering the past In this book Sunny Auyang tackles what she calls the large pictures of the human mind exploring the relevance of cognitive science findings to everyday mental life Auyang proposes a model of an open mind emerging from the self organization of infrastructures which she opposes to prevalent models that treat mind as a disembodied brain or computer subject to the control of external agents such as neuroscientists and programmers Her model consists of three parts 1 the open mind of our conscious life 2 mind's infrastructure the unconscious processes studied by cognitive science and 3 emergence the relation between the open mind and its infrastructure At the heart of Auyang's model is the mind that opens to the world and makes it intelligible A person with an open mind feels thinks recognizes believes doubts anticipates fears speaks and listens and is aware of I together with it and thou Cognitive scientists refer to the binding problem the question of how myriad unconscious processes combine into the unity of consciousness Auyang approaches the problem from the other end by starting with everyday experience rather than with the mental infrastructure In so doing she shows both how analyses of experiences can help to advance cognitive science and how cognitive science can help us to understand ourselves as autonomous subjects Semiosis, Marginal Signs and Trickster C.W. Spinks, 2016-07-27 As signifying creatures we fear the false creation signifying nothing because like Macbeth we think of them as daggers of the mind that raise questions about the reality of our signs about signs as tools of creation and power about the dark terrors and

lighter joys that exist in human desire and about the signs and the mind This text argues that signs are at base generative things creating as much as they refer

Excavating the Mind Helle Juel Jensen,Mads D. Jessen,Niels Johannsen,2012-05-07 Excavating the Mind deals with the relationship between the material culture of humans i e our technologies arts and environments and our mental worlds Emphasizing the close interdependence of mind and matter the volume resonates with current developments within sociology psychology and the cognitive sciences yet it aims to supplement the focus on modern predominantly Western societies and individuals with studies of different cultural contexts and processes in the evolutionary and historical past as well as the ethnographic present With contributions from cognitive and social archaeology as well as anthropology semiotics and the history of religion the book combines well illustrated case studies covering a wide chronological and geographic span from Neolithic Europe to the present day South Pacific with incisive discussion of particular theoretical issues in the study of mind and material culture Excavating the Mind is an original contribution to the multidisciplinary debate on the uniquely human entanglement of complex material cultures and mental worlds

Swords and Daggers in Late Bronze Age Canaan Sarel Shalev,2004 At the heart of this study of the history of the sword and dagger in Canaan between c 1550 and 1000 BC lies a catalogue of 190 examples all of which are illustrated The catalogue supports a detailed discussion of typology Ten types are identified by their tang and hilt shape as well as their cultural influences from Egypt and the Aegean A final synthesis considers technological and social aspects of the daggers and swords usually found as grave goods such as what they reveal about Canaanite burial customs metalworking and contact with Egypt
