Agent Causality F. Vollmer,2013-03-14 We act for reasons But it is sometimes claimed the mental states and events that make up reasons are not sufficient conditions of actions Reasons never make actions happen We as agents persons selves subjects make our actions happen Actions are done by us not elicited by reasons The present essay is an attempt to understand this concept of agent causality Who or what is an agent And how in virtue of what does an agent do things or refrain from doing them The first chapter deals with problems in the theory of action that seem to require the assumption that actions are controlled by agents Chapters two and three then review and discuss theories of agent causality Chapters four and five make up the central parts of the essay in which my own solution is put forth and chapter six presents some data that seem to support this view Chapter seven discusses how the theory can be reconciled with neuro physiological facts And in the last two chapters the theory is confronted with conflicting viewpoints and phenomena Daniel Robinson and Richard Swinburne took time to read parts of the manuscript in draft form Though they disagree with my main viewpoints on the nature of the self their comments were very helpful I hereby thank them both Better Life and Business Branko Souček,2013-05-21 Better Life and Business Cell Brain Mind and Sex Universal Laws is an e book that defines the fascinating new discipline BRAINLIFEBIZ BRAINLIFEBIZ combines new discoveries in neurobiology behavior and medicine with novel concepts related to conscious software programming automation system adaptation module selection self organization and automatic discovery In other words BRAINLIFEBIZ is a science of the consciousness bio quantum random chaos computations self organized event trains and processes with several conditions continuous and discrete without leadership and central control etc The goal of BRAINLIFEBIZ is to create a perfect computer model that simulates animal and human behavior in a computerized experimental setting This volume presents simulations of the firefly cricket katydid frog bird and human prefrontal cortex The book breaks across the lines that separate scientific disciplines It explains the global nature of the specific intelligent systems outlined above These intelligent systems features include learning self organization fuzzy logic high speed signal processing and process control These features are employed to generate an intelligence map The map presents figures and equations curves and data for major Elementary Processes aggression mimicry chaos trains pile up attractions courting mating emotion reasoning and consciousness Elementary Processes are then simulated to interact with each other and form millions of complex processes explained by universal laws behind the cell brain mind sex These laws explain in a new way natural selection and reproductive success in the local and global society and business These laws can be applied in a variety of situations from everyday stress free life to intelligent business decision making but with a solid biomedical and scientific foundation The theory behind intelligent systems can be viewed as a complement to the genetic DNA code The brain generates various brain event trains which allow it to store information in dispersed neural networks

Morton,Judith M. Hall,2012-12-06

The purpose of this dictionary is to provide a convenient and affordable personal desk reference resource. The authors who have many years experience in pharmacological research teaching and editing recognized a need for a single up to date volume encompassing material that hitherto could be gathered only from a well stocked library. This book comprises two main sections: an A-Z listing of drugs and their properties and a descriptive glossary of technical terms. The level and scope of this reference material will make it essential for pharmacologists and medicinal chemists from the graduate student to established worker. It should also be valuable to workers in allied biomedical disciplines such as biochemistry and physiology, medical students and science writers and editors.

Scope: The dictionary is centred on pharmacologically active agents. Workers in drug related disciplines need to correctly identify individual agents from an arsenal of pharmacologically active compounds, each with a number of alternative drug names according to the country or naming convention.

Linus Pauling in His Own Words Barbara Marinacci, 1995-10-30. Two time Nobel Prize winner Linus Pauling was known for his scientific discoveries and of his breadth of knowledge which spanned disciplines. The author who knew Pauling well has chosen from among more than 60 years of essays, letters, articles, books, speeches and interviews. As Pauling himself says in the Introduction: "This book will take me as close to writing my memoirs or autobiography as I shall ever get."

Physiology of the Soul and Instinct, as Distinguished from Materialism Martyn Paine, 1872

Self-consciousness and "split" Brains Elizabeth Schechter, 2018. Could a single human being ever have multiple conscious minds? Some human beings do. The corpus callosum is a large pathway connecting the two hemispheres of the brain. In the second half of the twentieth century a number of people had this pathway cut through as a treatment for epilepsy. They became colloquially known as split brain subjects. After the two hemispheres of the brain are cortically separated in this way they begin to operate unusually independently of each other in the realm of thought, action and conscious experience, almost as if each hemisphere now had a mind of its own. Philosophical discussion of the split brain cases has overwhelmingly focused on questions of psychological identity in split brain subjects: questions like "How many subjects of experience is a split brain subject?" "How many intentional agents?" "How many persons?" On the one hand, under experimental conditions, split brain subjects often act in ways difficult to understand except in terms of each of them having two distinct streams or centers of consciousness. Split brain subjects thus evoke the duality intuition that a single split brain human being is somehow composed of two thinking, experiencing and acting things. On the other hand, a split brain subject nonetheless seems like one of us at the end of the day rather than like two people sharing one body. In other words, split brain subjects also evoke the unity intuition that a split brain subject is one person. Elizabeth Schechter argues that there are in

fact two minds subjects of experience and intentional agents inside each split brain human being right and left On the other hand each split brain subject is nonetheless one of us The key to reconciling these two claims is to understand the ways in which each of us is transformed by self consciousness
