Fuzzy Portfolio Optimization Pankaj Gupta, Mukesh Kumar Mehlawat, Masahiro Inuiguchi, Suresh Chandra, 2014-03-17 This monograph presents a comprehensive study of portfolio optimization, an important area of quantitative finance. Considering that the information available in financial markets is incomplete and that the markets are affected by vagueness and ambiguity, the monograph deals with fuzzy portfolio optimization models. At first, the book makes the reader familiar with basic concepts including the classical mean variance portfolio analysis. Then it introduces advanced optimization techniques and applies them for the development of various multi criteria portfolio optimization models in an uncertain environment. The models are developed considering both the financial and non financial criteria of investment decision making and the inputs from the investment experts. The utility of these models in practice is then demonstrated using numerical illustrations based on real world data which were collected from one of the premier stock exchanges in India. The book addresses both academics and professionals pursuing advanced research and/or engaged in practical issues in the rapidly evolving field of portfolio optimization.
