**Aging and Recovery of Function in the Central Nervous System** Stephen W. Scheff, 2013-11-11 The mammalian central nervous system is a remarkable structure which has attracted many new investigators as evidenced by the dramatic increase in scientific publications dealing with neurobiology Every day basic scientists conduct new and exciting experiments resulting in remarkable discoveries destined to help mankind Unfortunately many of these new findings are slow to be accepted by the clinical world This is especially true in the area of brain trauma where the present prognosis is usually very poor We have known for quite some time that the mammalian central nervous system is capable of compensating for severe damage in many different ways and under some circumstances behavioral compensation can be observed However much is still to be learned about the various factors and events that lead to functional recovery and those conditions that do not It is this challenge that originally excited a number of the contributors to this volume to explore the subject of recovery from brain damage One factor in particular that is known to change the prognosis of recovery is the age of the organism at the time of the damage This book is an attempt to explore this important variable Most of the literature concerning aging deals with widespread degenerative changes and paints a grim picture for the aging central nervous system in terms of recovery of function following trauma *Aging of the Central Nervous System* V. V. Frolkis, V. V. Bezrukov, 1979-11-16 Mechanisms of Neuronal Recovery in the Central Nervous System Luis B. Tovar-y-Romo, Alicia Guemez-Gamboa, João M. N. **Textbook of Pediatric Neurology** Gerald J. Golden,2012-12-06 Neurological signs or symptoms are present in approximately 20% of all children admitted to the hospital These may be the reason for admission or may be part of preexisting and often unrelated problems In ambulatory practice acute neurological disease is not seen as frequently but issues relating to normal and abnormal development are constantly being faced For these reasons familiarity with the progress of normal development and factors interfering with it as well as knowledge of the major acute and chronic disorders of the nervous and neuromuscular systems is important for any practitioner specialist or generalist who cares for children The pathophysiology of neurological disorders in childhood is based on the same principles of the organization structure and function of the nervous system as apply to adults Two pitfalls are present for the student however First the abnormalities are superimposed on a changing developing brain not a rather static mature organ The manifestations of the disease may vary

there fore in seemingly unpredictable fashion depending on the rate of progression of the disorder and the rate and adequacy of the ongoing developmental changes in the nervous system The second problem is the large number of unfamiliar conditions many of which have no counterpart in adult neurology or medicine These include developmental malformations disorders specific to the neonatal period and many hereditary and metabolic diseases *The Clinical Neurology of Old Age* R. Tallis,1989 Dealing comprehensively with the neurological disorders of the aged The Clinical Neurology of Old Age provides a practical guide to the analysis and management of these disorders Forty specialists provide a broad range of coverage discussing the influence of age on the pattern of disease and presenting an up to date account of changing knowledge of both well known and relatively unexplored areas of geriatric neurology *Novel Molecular Mechanisms and Innovative Therapeutic Approaches for Age-Associated Diseases* Leming Sun,Zhe-Sheng Chen,Zhen Fan,2022-06-03 The Cumulative Book Index ,1985 A world list of books in the English language
