Aging Health And Competence:

Aging, Health, and Competence J. J. F. Schroots, 1993 The unprecedented increase in life expectancy has resulted in a large number of elderly people in our populations many of whom are vulnerable to developing health problems While past longitudinal studies of health and aging have provided some insights into our increased vulnerability with age it is recognized that the next century demands of us more sophisticated multidisciplinary longitudinal research to measure trends in adult health and to identify patterns of aging in populations and individuals This book brings together leading researchers in the field of health and aging to begin to discuss new theoretical developments and insights into the determinants of healthy aging and to outline the issues of the next generation of longitudinal research It includes reviews of past and current longitudinal studies of aging discussions of current and future research directions and information of use to social policy educational and medical programs and the elderly themselves This volume will be of great interest to gerontologists geriatricians and public health workers providing the background and motivation to stimulate the next generation of longitudinal research on health and aging

The Many Faces of Health, Competence and Well-Being in Old Age Hans-Werner Wahl, Herrmann Brenner, Heidrun Mollenkopf, Dietrich Rothenbacher, Christoph Rott, 2006-01-09 The main aim of the book is to provide an interdisciplinary treatment of a set of key issues of current ageing research i e health competence and well being These key issues are addressed based on three converging research streams social ecological research which assumes that major processes and outcomes of ageing such as day to day competence are shaped by social and physical spatial environments geropsychology research which is driven by a life span developmental conception of ageing and epidemiology which offers most fundamental disease function and prevention related data Each of the three major research directions are outlined by a short introduction followed by three chapters treating in an empirical manner most recent key research questions All chapters are then also discussed by renowned ageing experts This volume links ageing research with policy considerations and implications and establishes a link between European research and the knowledge base of the international scientific community concerned with ageing This book will be of great interest to scholars and graduate students in ageing research in the social and behavioural field as well as in epidemiology geriatrics geropsychiatry demography and biogerontology

Aging in Europe J. J. F. Schroots, 1999 Human aging is perhaps the most complex and important subject that will be facing science and societies in the next century Persons seem to be living longer and remaining more active than their parents and grandparents This is leading to social and demographic shifts that must be accommodated by society On the other hand it presents perplexing questions about the underlying processes and determinants of healthy aging This book gives a design for research that will increase our understanding of the factors that influence healthy aging and can lead to improvements in reducing the levels of disability in the population It s focus is on biobehavioural and psychological factors contributing to healthy aging Since human aging is determined by many interacting

conditions inside and outside of the organism research should concentrate on ecological relationships between the human organism and its social and physical environment Not only individual characteristics associated with aging are discussed in this book but also their impacts on society Living longer means most persons will have fewer years to earn money to maintain their lives in a longer retirement How can these two forces be resolved through public policy At the same time greater competence in the later years needs clues to ways of releasing this productivity for the benefit of society and individuals Adding healthy life expectancy and creating as much as possible disability free years is a goal that can only be reached through fact finding by a multidisciplinary team of scientist collaborating on an international basis Such a team is present in the collaborators represented in this book The information presented in Aging in Europe has not been available in any single source before In many ways this book provides a model of gaining knowledge through cooperation that should guide us in the next century and beyond

Zenilman, Mark R. Katlic, 2013-06-29 More than two decades ago in response to the special healthcare needs of the aging American population interest in the field of geriatric medicine began to grow and blossom in the United States In 1984 and 1985 under the editorial leadership of Christine K Cassel and William R Hazzard respectively two major textbooks devoted to the medical care of aged patients were published These scholarly comprehensive texts provided insight into the principles of aging and guidance in the care of the geriatric patient Three editions later the need to understand the special issues involved in the medical care of the elderly is widely accepted by internists primary care providers and medical specialists For the

editors of this book the special issues involved in the surgical care of the elderly have been apparent for nearly as long. Although there have been a few scholarly texts on the subject including one in 1990 by Mark R Katlic general acceptance of the concept of geriatric surgery by our surgical and medical colleagues has however lagged. This is not the result of a proportionately smaller number of older patients with surgical disease because cancer cardiovascular disease and orthopedic problems are diseases of the aged. It is rather the result of uncertainty about the value of surgery in the elderly and concerns about the risks of operations. In the past such concerns prevented primary care givers from referring patients for surgical care and prevented surgeons from agreeing to operate.

Aging Cindy S. Bergeman, 1997-04-30 Why do people age differently? Research in the field of gerontology has indicated that there are large individual differences in personality cognitive functioning physical health and psychological well being as well as in the quality of life in the later years. It is this variability and the reasons why people age differently that this book explores. Thoughtfully written *Aging* presents an overview of what is known about genetic and environmental influences on aging. Beginning with an overview of family adoption and twin designs author Cindy S Bergeman examines such topics as the research in the area of longevity and health cognitive functioning personality and psychopathology and social support life events and measures of the family environment. The book concludes with a summary of the field of gerontological behavioral genetics. This book will stimulate discussion and future work about the origins of individual differences in later life and will be invaluable to professionals and practitioners in the fields of developmental psychology psychology aging family studies and nursing.

Nursing for Wellness in Older Adults Carol A. Miller, 2009 Now in its Fifth Edition this text provides a comprehensive and wellness oriented approach to the theory and practice of gerontologic nursing. Organized around the author's unique functional consequences theory of gerontologic nursing the book explores normal age related changes and risk factors that often interfere with optimal health and functioning to effectively identify and teach health promotion interventions. The author provides research based background information and a variety of practical assessment and intervention strategies for use in every clinical setting. Highlights of this edition include expanded coverage of evidence based practice more first person stories new chapters and clinical tools such as assessment tools recommended by the Hartford Institute of Geriatric Nursing.

sleep ethics cultural and spiritual issues and the dying process Understanding Human Development Ursula M. Staudinger, Ulman E.R. Lindenberger, 2012-12-06 K Warner Schaie I am pleased to write a foreword for this interesting volume particularly as over many years I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague mentor or research collaborator The editors begin their introduction by asking why one would want to read yet another book on human development They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development This volume provides a positive remedy to past deficiencies in volumes on human development with a well organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure This approach does not surprise After all the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin whether as students junior scientists or senior visitors That institute under the leadership of Paul Baltes has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality Over the past two decades it has influenced the careers of a generation of scientists who have advocated long term studies of human development in an interdisciplinary context **Multicultural Perspectives in Working with Families** Elaine Piller Congress, 2005 This book addresses cutting edge issues in the assessment and treatment of families from diverse cultural backgrounds It covers a wide array of related family issues and skills which are important for human service practitioners in the helping disciplines
