Art Theory as Visual Epistemology Harald Klinke, 2014-06-26 How can we know What does knowledge mean These were the fundamental questions of epistemology in the 17th century In response to continental rationalism the British empiricist John Locke proposed that the only knowledge humans can have is acquired a posteriori In a discussion of the human mind he argued the source of knowledge is sensual experience mostly vision Since vision and picture making are the realm of art art theory picked up on questions such as are pictures able to represent knowledge about the world How does the production of images itself generate knowledge How does pictorial logic differ from linguistic logic How can artists contribute to a collective search for truth Questions concerning the epistemic potential of art can be found throughout the centuries up until the present day However these are not questions of art alone but of the representational value of images in general Thus the history of art theory can contribute much to recent discussions in Visual Studies and Bildwissenschaften by showing the historic dimension of arguments about what images are or should be What is knowledge is as much a philosophic question as What is an image Visual epistemology is a new and promising research field that is best investigated using an interdisciplinary approach that addresses a range of interconnected areas such as internal and external images and the interplay of producer and perceiver of images This publication outlines this territory by gathering together several approaches to visual epistemology by many distinguished authors
