2. Describe

A short summary of the theory, research findings or argument.

The article examines the importance of hand hygiene during invasive procedures, particularly in the insertion of urinary catheters and peripheral and central venous catheters. The primary reason for best practice in hand hygiene is to reduce the risk of healthcare-associated infection (HCAI).

A short statement of the author's viewpoint

To prevent micro-organisms from gaining access to the urinary tract and bladder, hand hygiene should be practiced before the invasive procedure is undertaken. It is important that clinical policies and procedures highlight when hand hygiene should take place to ensure reliability of care, avoid confusion among healthcare professionals and standardise the practice. Regular assessment and review of hand hygiene practices will ensure the safety of the patient is maintained and patient outcomes will be optimised.

3.Evaluate

Comment on the usefulness and/or limitations of the text for your research

The article provides step by step instructions on inserting catheters, suggesting hand washing should be done at the beginning of the procedure. This is useful information for understanding how this should be carried out in clinical settings. However, it does not provide scientific evidence or explanation on why hand washing and following the procedure for catheter insertion reduces infection rates.

4. Link

A final comment on the article as it relates to your assessment task.

Therefore, this article is useful for understanding best practice when undertaking invasive procedures such as catheter insertion, and in particular the importance of hand hygiene. However, it does not address how hand hygiene prevents infection and as a result only some of the assessment task requirements would be met by using this source.
