Aids Health Crisis Psychological And Social Interventions:

The AIDS Health Crisis Jeffrey A. Kelly, Janet S. St. Lawrence, 2013-03-07 Acquired immune deficiency syndrome AIDS poses a health threat unparalleled in modern times Identified just a few years ago AIDS and the human immunodeficiency virus HIV responsible for it affect millions of persons worldwide AIDS has already become the leading cause of death among persons under 40 in some large American cities From the beginning it has been evident that AIDS carries unique psychological and social ramifications In spite of its lethality new cases of HIV infection are preventable if individuals can be assisted to make behavior changes to lessen or eliminate viral transmission To the extent that we can develop effective primary prevention interventions it will be possible to keep larger numbers of people from becoming infected with the virus Psychological and social risk behavior change interventions whether at the level of individual clients groups or entire communities can play a key role in fact the only available role in disease prevention Patients with any life threatening illness have psychological social and support needs However these needs are more pronounced and often less easily addressed for persons affected by AIDS People in good clinical health but with HIV infection face years of worry concerning whether they will develop AIDS Nearly 2 million Americans are currently in this precarious position by 1991 50 to 100 million persons worldwide are expected to share the same uncertainty

Handbook of Health and Rehabilitation Psychology Anthony J. Goreczny, 2013-11-11 Despite medical technological advances the major killers with which we must currently contend have remained essentially the same for the past few decades Stroke cancer and heart disease together account for the vast majority of deaths in the United States In addition due to improved medical care many Americans who would previously have died now survive these disorders necessitating that they receive appropriate rehabilitation efforts One result of our own medical advances is that we must now accept the high costs associated with providing quality care to individuals who develop one of these problems and we must avail ourselves to assist afflicted individuals families Despite the relative stability of causes of death and disability the health care field is currently experiencing tremendous pressures both from professionals within the field who desire more and better technology than is currently available and from the public and other payers of health care e.g. insurance companies who seek an end to increasing health care costs These pressures along with an increased emphasis on providing

evidence of cost effectiveness and quality assurance are substantially changing the way that health care professionals perform their jobs

Homosexual Issues In The Workplace Louis Diamant, 2018-10-24 First published in 1993 This book looks at the stress of gay and lesbian workers within the work world and for that reason alone deserves its place on a list of recommended mental health psycho social health readings However more than this major factor merits consideration Issues that are core to the identity of any person must be examined from the particular position of the homosexual worker and career seeker and include such fundamental concepts as fairness self esteem economics survival the need and right to participate in the work force and the need and right for a voice and basic identity in vocational systems

Handbook of HIV Prevention John L. Peterson, Ralph J. DiClemente, 2012-12-06 In the nearly two decades since the HIV pandemic began the rapid expansion of behavioral research on HIV prevention has prompted a crucial need for a sourcebook more advanced than an introductory textbook and broader and more readily accessible than a review periodical The Handbook of HIV Prevention is intended as the first attempt to meet this need The current state of affairs led us to edit a book that would represent the major areas of HIV behavioral research at a level appropriate for graduate students and experienced researchers in public health medicine nursing education and the social and behavioral sciences In addition we expect that the handbook will be useful in advanced undergraduate courses and as a reference book for health care professionals Our plans to assemble the Handbook began in the fall of 1996 when we prepared a tentative outline of chapters and invited a large number of distinguished researchers in the field to be the authors of various chapters We received an overwhelmingly favorable response from potential authors to our letters of invitation After considerable effort by both the contributors and the editors the volume was completed in 1999 when all chapters went to press

The Challenge of Cognitive Therapy T. Michael Vallis, Janice L. Howes, Philip C. Miller, 2013-11-21 Cognitive therapy is fast becoming one of the more popular and well respected forms of psychotherapy In both research and clinical practice several advantages of cognitive therapy have been identified Cognitive therapy is structured enough to provide a therapeutic framework for clinicians as well as a theoretical framework for clinical researchers yet flexible enough to address an individual's problems in a highly idiosyncratic manner Accompanying the popularity of cognitive therapy is the expansion of its application beyond the areas in which it was initially developed and validated the traditional areas of depression and anxiety to areas where validation has not yet occurred the nontraditional areas We strongly believe that such broadening of cognitive therapy should be encouraged but that conceptual models to guide the therapist and researcher in these areas should be explicated It is the purpose of this text to provide a conceptual framework for dealing with select nontraditional populations The idea and motivation for this text develops from a cognitive therapy interest group in Toronto All of the authors contributing to this text are involved in this group We represent a group of cognitive therapists functioning in a variety of diverse settings including clinical research units general hospital settings private or public rehabilitation centers and private practices Thus the diversity of referrals for cognitive therapy within our group is great
