**Hiv** Michael B. Blank, Marlene M. Eisenberg, 2014-01-14 Learn why it's time for a new era in mental health and prevention science

HIV Issues with Mental Health and Illness is a comprehensive examination of the co-morbidity that exists between HIV/AIDS and mental illness. Internationally recognized experts in the field analyze the latest research on why HIV sufferers are at risk of developing mental illness and how people who suffer from mental illness risk contracting HIV through sexual behavior and substance abuse. This unique book focuses on clinical and diagnostic issues, the organization of service delivery systems, and community-based interventions. HIV Issues with Mental Health and Illness presents vital contributions from physicians, sociologists, nurses, social workers, and psychologists working to develop a plan to reduce the number of persons affected by the epidemic and to improve the quality of life of those already HIV-infected. Aimed at promoting a new era in mental health and prevention science, the book examines vital issues including the interplay between depression, HIV, and chronic fatigue; condom use among adolescents with psychiatric disorders; predicting HIV risk and how targeted intervention can address multiple health risks; how an increase in emotional stress can affect African American women concerned about becoming HIV-infected; STI risk reduction strategies; how client gender can affect mental health care service delivery and the implementation of intervention programs as part of supported housing programs. HIV Issues with Mental Health and Illness examines bridging the gap between research and practice, depression and HIV, schizophrenia and HIV, mental health policy and infectious diseases, HIV prevention, community-based participatory research, community psychology, mental health disparities, translation research, transforming public health systems. HIV Issues with Mental Health and Illness is an invaluable resource for public health workers and policymakers, psychologists, psychiatrists, social workers, nurses, infectious disease physicians, and addiction disease counselors.

**HIV and Psychiatry** John A. Joska, Dan J. Stein, Igor Grant, 2014-02-26 Mental health and HIV/AIDS are closely interlinked. Mental disorders including substance use disorders are associated with increased risk of HIV infection and affect adherence to and efficacy of antiretroviral treatments. Conversely, HIV infection can increase risk for neuropsychiatric complications including stress, mood, and neurocognitive disorders. This book provides clinicians with a comprehensive, evidenced-based, and practical approach to the management of patients with HIV infection and co-morbid mental disorders. It provides up-to-date and clear overviews of current clinical issues as well as the relevant basic science. Information and data from studies of different HIV groups (e.g., men who have sex with men) make the text relevant to a broad spectrum of clinicians, including those working with low socioeconomic status groups in high-income countries and those working in the developing world. The book uses the popular format of the World Psychiatric Association's Evidence and Experience series. Review chapters summarize the evidence on the epidemiology, pathogenesis, and clinical aspects of mental disorders in HIV and interventions, both psychotherapy and

psychopharmacology including drug drug interactions These are complemented by commentaries addressing particular facets of each topic and providing insight gained from clinical experience Psychiatrists psychologists and all mental health staff working with HIV infected patients will find this book of great benefit *AIDS and People with Severe Mental Illness* Francine Cournois, Nick Bakalar, Nicholas Bakalar, 1996-01-01 While HIV spreads among people with severe mental illness for the same reasons it does in the general population there are specific ways in which mental illness is associated with elevated HIV risk Every mental health institution programme now has to deal with the consequences of increased HIV rates *AIDS and People with Severe Mental Illness* covers the range of information for those who deal with these patients epidemiological medical psychological legal ethical and policy issues are all examined by authorities in those areas Mental Health and HIV/AIDS, 2003 The intersection between mental health and HIV AIDS is relatively underdeveloped This report draws on the perspectives and experiences of academics non governmental workers and government officials from both developed and developing countries who gathered at a meeting in March 2003 The aim of the meeting was to start it develop a better understanding of the complex ways in which HIV AIDS affects people s mental health and the implications this has for those infected by the disease their families and friends as well as for the society as a whole **HIV Mental Health for the 21st Century** Mark G.
