## **Aids Rhetoric And Medical Knowledge:**

**AIDS, Rhetoric, and Medical Knowledge** Alex Preda, 2004-11-29 This 2005 book examines the formation of scientific knowledge about the AIDS epidemic in the 1980s and shows the broader cultural assumptions which grounded this knowledge Alex Preda highlights the metaphors narratives and classifications which framed scientific hypotheses about the nature of the infectious agent and its transmission ways and compares these arguments with those used in the scientific knowledge about SARS Through detailed rhetorical analysis of biomedical publications the author shows how knowledge about epidemics is shaped by cultural narratives and categories of social thought Preda situates his analysis in the broader frame of the world risk society where scientific knowledge is called upon to support and shape public policies about prevention and health maintenance among others But can these policies avoid the influence of cultural narratives and of social classifications The book shows how culture matters for prevention and health policies as well as with respect to how scientific research is organized and funded

*International Politics of HIV/AIDS* Hakan Seckinelgin, 2007-08-07 This book examines the global governance of the HIV AIDS epidemic interrogating the role of this international system and global discourse on HIV AIDS interventions The geographical focus is Sub Saharan Africa since the region has been at the forefront of these interventions There is a need to understand the relationship between the international political environment and the impact of resulting policies on HIV AIDS in the context of people s lives Hakan Seckinelgin points out a certain disjuncture between this governance structures and the way people experience the disease in their everyday lives Although the structure allows people to emerge as policy relevant target groups and beneficiaries the articulation of needs and design of policy interventions tends to reflect international priorities rather than people s thinking on the problem In other words he argues that while the international interventions highlight the importance attributed to the HIV AIDS problem the nature of the system does not allow interventions to be far reaching and sustainable Offering a critical contribution to the understanding of the problems in HIV AIDS in Sub Saharan Africa *International Politics of HIV AIDS* will be invaluable to students and researchers of health international politics and development

The virus that changed how we think about cancer and its culprits and the vaccine that changed how we talk about sex and its risks Starting in 2005 people in the US and Europe were inundated with media coverage announcing the link between cervical cancer and the sexually transmitted virus HPV Within a year product ads promoted a vaccine targeting cancer s viral cause and girls and women became early consumers of this new cancer vaccine An understanding of HPV s broadening association with other cancers led to the identification of new at risk populations namely boys and men and ignited a plethora of gender and sexual issues related to cancer prevention *Sexualizing Cancer* is the first book dedicated to the emergence and proliferation of the HPV vaccine along with the medical capacity to screen for HPV crucial landmarks in the cancer prevention arsenal based on a novel connection between sex and chronic disease Interweaving accounts from the realms of biomedical science public health and social justice Laura Mamo chronicles cervical cancer s journey out of exam rooms and into public discourse She shows how the late twentieth century scientific breakthrough that identified the human papilloma virus as having a causative role in the onset of human cancer galvanized sexual politics struggles for inclusion new at risk populations and ultimately a new regime of cancer prevention Mamo reveals how gender and other equity arguments from within scientific medical and advocate communities shaped vaccine guidelines clinical trial funding research practices and clinical programs with consequences that reverberate today This is a must read history of medical expansion from a woman s disease to a set of cancers that affect all genders and of lingering sexualization with specific gendered racialized and other contours along the way      *Indian Anthropologist* ,2005      *Axiological Pluralism* Lucia Busatta,Carlo Casonato,2021-09-02

is to respond to individual requests and technological advances in the field of biolaw by consistently and effectively applying suitable legal instruments and jurisdictional interpretation

**Risky Rhetoric** J. Blake Scott, 2003 *Risky Rhetoric AIDS and the Cultural Practices of HIV Testing* is the first book length study of the rhetoric inherent in and surrounding HIV testing In addition to providing a history of HIV testing in the United States from 1985 to the present J Blake Scott explains how faulty arguments about testing s power and effects have promoted unresponsive and even dangerous testing practices for so called normal subjects as well as those deemed risky Drawing on classical rhetoric as well as Michel Foucault s theorizing of the examination as a form of disciplinary power this study explores how HIV testing functions as a disciplinary technology that shapes subjects and exerts power over individual bodies and populations Testing has largely been deployed to protect those defined as normal members of the general population by detecting managing and even punishing those diagnosed as risky e g gay and bisexual men poor women of color But Scott reveals that testing s function of protection through detection has been fueled in part by faulty arguments that exaggerate testing s interventive power and benefits These arguments have also created a perception that testing is a magic bullet By overestimating the benefits of HIV testing and overlooking its contingencies and harmful effects dominant arguments about testing have enabled a shortsighted public health response to HIV and unresponsive testing policies The ultimate goal of *Risky Rhetoric AIDS and the Cultural Practices of HIV Testing* is to offer strategies to policymakers HIV educators and test counselors and other rhetors for developing more responsive and egalitarian testing related rhetorics and practices

**A Guided Science** Jaan Valsiner, 2017-07-05 That sciences are guided by explicit and implicit ties to their surrounding social world is not new Jaan Valsiner fills in the wide background of scholarship on the history of science the recent focus on social studies of sciences and the cultural and cognitive analyses of knowledge making The theoretical scheme that he uses to explain the phenomena of social guidance of science comes from his thinking about processes of development in general his theory of bounded indeterminacy and on the relations of human beings with their culturally organized environments Valsiner examines reasons for the slow and nonlinear progress of ideas in psychology as a science at the border of natural and social sciences Why is that intellectual progress occurs in different countries at different times Most responses are self serving blinders for presenting science as a given rather than understanding it as a deeply human experience For Valsiner scientific knowledge is cultural at its core Major changes have occurred in contemporary sciences collective authorship fragmentation of knowledge into small quickly

published and equally quickly retractable journal articles and the counting of numbers of such articles by institutions as if that is a measure of scientific productivity Scientists are inherently ambivalent about the benefit of these changes for the actual development of knowledge There is a gradual takeover of the domain of scientific knowledge creation by other social institutions with vested interests in defending and promoting knowledge that serves their social interests Sciences are entering into a new form of social servitude

**Biomedicalization** Adele E. Clarke, Laura Mamo, Jennifer Ruth

Fosket, Jennifer R. Fishman, Janet K. Shim, 2010-08-31 Essays describing how dramatic and especially technoscientific changes in the constitution organization and practices of contemporary biomedicine have coalesced since the mid 1980s in biomedicalization the second transformation of American medicine

**The Silent Revolution in Cancer and AIDS**

**Medicine** Heinrich Kremer, 2012-09-10 Examining all the major research data since the 1940s this book challenges two orthodox medical models HIV as the cause of AIDS and random genetic mutations as the cause of cancer Based on the recent findings from Evolutionary Biology and Nitric Oxide research it presents a fundamentally new understanding of the human cell its double genome split between the cell nucleus and the mitochondria and the role of energy production and signal modulation for immune reactions and carcinogenesis Finally it explains the concept of a new Cell Symbiosis Therapy for the treatment of all chronic diseases including cancer Now available in English for the first time this book is a must read for doctors patients and anyone following the cutting edge of biology and immunology With the blasting open of such doors of knowledge the medical world will never again be the same Heinrich Kremer MD Medical Director Emeritus was from 1968 1975 head of social therapy for addicts sexual offenders and people with personality disorders at the Berlin Tegel prison which was the pilot project for the reform of the German penal system In 1988 he resigned as medical director of a model clinic specializing in youth drug addiction due to differences on medical ethics regarding the HIV test and AIDS therapy From 1993 1999 as collaborating member of the Study Group for Nutrition and Immunity Bern he investigated together with Prof Alfred H ssig the mechanisms occurring in AIDS defining illnesses and in cancer Since the publication of this book in German in 2001 he has been in demand as a lecturer on the treatment of chronic diseases working today as senior consultant in a growing medical network for Cell Symbiosis Therapy

**Infertility** Robin E. Jensen, 2016-09-29 This book explores the

arguments appeals and narratives that have defined the meaning of infertility in the modern history of the United States and Europe Throughout the last century the inability of women to conceive children has been explained by discrepant views that women are individually culpable for their own reproductive health problems or that they require the intervention of medical experts to correct abnormalities Using doctor patient correspondence oral histories and contemporaneous popular and scientific news coverage Robin Jensen parses the often thin rhetorical divide between moralization and medicalization revealing how dominating explanations for infertility have emerged from seemingly competing narratives Her longitudinal account illustrates the ways in which old arguments and appeals do not disappear in the light of new information but instead

reemerge at subsequent often seemingly disconnected moments to combine and contend with new assertions Tracing the transformation of language surrounding infertility from barrenness to in fertility this rhetorical analysis both explicates how language was and is used to establish the concept of infertility and shows the implications these rhetorical constructions continue to have for individuals and the societies in which they live
