Air Outside Inside And All Around:

The Child's Conception of Physical Causality Jean Piaget, 1999 Our encounters with the physical world are filled with miraculous puzzles wind appears from somewhere heavy objects like oil tankers float on oceans yet smaller objects go to the bottom of our water filled buckets As adults instead of confronting a whole world we are reduced to driving from one parking garage to another The Child's Conception of Physical Causality part of the very beginning of the ground breaking work of the Swiss naturalist Jean Piaget is filled with creative experimental ideas for probing the most sophisticated ways of thinking in children The strength of Piaget's research is evident in this collection of empirical data systematically organized by tasks that illuminate how things work Piaget's data are remarkably rich In his new introduction Jaan Valsiner observes that Piaget had no grand theoretical aims yet the book's simple power cannot be ignored Piaget's great contribution to developmental psychology was his clinical method a tactic that integrated relevant aspects of naturalistic experiment interview and observation Through this systematic inquiry we gain insight into children's thinking Reading Piaget will encourage the contemporary reader to think about the unity of psychological phenomena and their theoretical underpinnings His wealth of creative experimental ideas probes into the most sophisticated ways of thinking in children Technologies change yet the creative curiosity of children remains basically unhindered by the consumer society Piaget's data preserve the reality of the original phenomena As such this work will provide a wealth of information for developmental psychologists and those involved in the field of experimental science Jean Piaget 1896-1980 is known for investigations of thought processes He was professor at Geneva University 1929-1954 and director of the International Center for Epistemology 1955-1980 He is the author of *The Language and Thought of the Child* *Judgment and Reasoning in the Child* *The Origin of Intelligence in Children* and *The Early Growth of Logic in the Child* Jaan Valsiner is professor of psychology at Clark University and a recognized authority on the life and work of Piaget Heat and Ventilation Dellon Marcus Dewey, 1851 **The Shattered Face in the**
