Fenn, L.I. de Bauer, Tomas Hernandez-Tejeda, 2012-12-06 At present roughly half of the world's population lives in urban centers There are now more than 20 cities with a population of over 10 million inhabitants compared to less than 5 about 50 years ago This tendency toward urbanization is expected to continue particularly in the developing world A consequence of this growing trend is that millions of people are being exposed to harmful levels of urban air pollutants caused mainly by emissions from motor vehicles and from industrial and domestic activities involving the combustion of fossil fuels The driving force for the design and implementation of emission control strategies aimed at improving air quality has been the protection of the health of the population in urban centers There are however other consequences of the presence of air pollutants besides the direct effect on human health Reduced visibility damage to monuments and buildings and many other such consequences indirectly affect our quality of life Another set of consequences involves damage to ecological systems In fact the nature of photochemical smog was first uncovered in the 1950s in connection with observations of its harmful effects on crops and plants in the vicinity of Los Angeles *Plants, Pollutants and Remediation* Münir Öztürk, Muhammad Ashraf, Ahmet Aksoy, M. pollution challenges nations sharing common borders to balance economic needs with protecting citizens and the environment across jurisdictions By examining landmark cases on the two borders John Wirth shows how environmental diplomacy citizen action at the grassroots level and the role of science industry and the law converged bringing Canada the United States and Mexico to the threshold of today's continental approaches to pollutant pathways Wirth first examines the famous Trail smelter conflict of 1927-1941 This precedent setting case which pitted U.S. farmers against the Canadian smelter resulted in the doctrine that in cases of transborder damage the polluter must pay Although the farmers were modestly compensated and the British Columbia based smelter cooperated to control pollution Wirth reveals the real significance of the decision U.S. industries shared with the Canadians a common interest to resolve the case in a manner that would allow them to continue to pollute freely across international borders with minimal regulation Wirth then turns to the Gray Triangle confrontations of the 1980s in which the new instruments of the Clean Air Act and cooperative policies developed by the Mexican and U.S. governments established an entirely new climate for citizen action resulting in the closing of an American smelter in Arizona and the imposition of stricter standards on two Mexican smelters in Sonora Although the Trail precedent favored industry the Gray Triangle resolution signaled that the needs of industry and the public interest were now in better balance Drawing on extensive interviews and previously untapped archives *Smelter Smoke in North America* provides new analysis of the development of a North American institutional response to continental air pollution It chronicles how industry developed a continental perspective in a shared regional space the mineralized West and how successful efforts of governments and citizens to protect the environment evolved
