Publisher's note In this 2nd edition the following article has been updated Kohn N Morawetz C Weymar M Yuan J and Dolcos F 2021 Editorial Cognitive Control of Emotions in Challenging Contexts Front Behav Neurosci 15 785875 doi 10.3389/fnbeh.2021.785875 *Current Index to Statistics, Applications, Methods and Theory*, 1990 The Current Index to Statistics CIS is a bibliographic index of publications in statistics probability and related fields **How Best to 'Go On'? Prospects for a 'Modern Synthesis' in the Sciences of Mind** Kevin Moore, John Cromby, 2016-08-08 Psychology straddles areas from the biological to the social and cultural Within that vast range there have been recent explosions of interest in neuropsychology genetics and epigenetics and the evolutionary bases of mindedness Correspondingly there have been conceptual innovations and new empirical evidence in relation to the embodied social and discursive processes supporting mind and personhood Simultaneously awareness of developmental processes and their dynamic interweaving of genetic physiological neurological social and cultural elements has also increased Might such developments help connect the dots between diverse aspects of mindedness and the contexts within which it arises Whilst it seems clear that mind is co constituted of both biological and socio cultural processes how might we bring these disparate realms of knowledge together In a number of these areas suggestive integrative possibilities have been explored e g predictive processing embodied and situated cognition dynamic developmental systems theory and insights such as a focus on action knowledge as skills embeddedness and connectivity have been pursued across a range of disciplines This edited collection of articles bring together such possibilities and others in the same forum in order to provide an opportunity to re visit a recurring discussion within theoretical psychology The claimed lack of and potential for theoretical synthesis and unity While the chapters range over a number of areas of research this collection is focused on current prospects for conceptual synthesis within or convergence of research between aspects of mind and mindedness As is clear from the contributions it highlights integrative conceptual proposals that emphasize action orientation process embeddedness and connectivity especially between explanatory levels Beyond specific proposals for integration several of the contributions explicitly or implicitly expose broader questions about the purpose of psychological research the epistemological and ontological commitments required and the relevant social political and economic contexts within which such research is performed This is perhaps inevitable since any aim for synthesis of various understandings of mind will or should lead to consideration of the general implications beyond the science that follow from an integrated account of mind and mindedness Whether or not the contributions in this volume provide insights into profitable paths

towards greater theoretical synthesis in the sciences of mind or alternatively provide grist for the mill of renewed skepticism over the potential or even desirability of such synthesis is unpredictable. Whichever the outcome we feel sure that they will help provoke future productive research in and thinking about the sciences of mind. Kevin Moore and John Cromby Associate Guest Editors
