The Basic Approach to Age-Structured Population Dynamics Mimmo Iannelli, Fabio Milner, 2017-08-27 This book provides an introduction to age structured population modeling which emphasizes the connection between mathematical theory and underlying biological assumptions Through the rigorous development of the linear theory and the nonlinear theory alongside numerics the authors explore classical equations that describe the dynamics of certain ecological systems Modeling aspects are discussed to show how relevant problems in the fields of demography ecology and epidemiology can be formulated and treated within the theory In particular the book presents extensions of age structured modeling to the spread of diseases and epidemics while also addressing the issue of regularity of solutions the asymptotic behavior of solutions and numerical approximation With sections on transmission models non autonomous models and global dynamics this book fills a gap in the literature on theoretical population dynamics The Basic Approach to Age Structured Population Dynamics will appeal to graduate students and researchers in mathematical biology epidemiology and demography who are interested in the systematic presentation of relevant models and mathematical methods *Aerospace Medicine and Biology*, 1986 A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports STAR and International aerospace abstracts IAA *Crime Laboratory Digest*, 1988 **Psychological and Biological Approaches to Emotion** Nancy L.

Likhtenshtein,1993-03-26 This 1993 volume covers all aspects of the field of physical labels the theoretical bases the experimental techniques and shows how to interpret the resulting data Translational Speech-Language Pathology and Audiology Robert Goldfarb,2012-04-05 *Endometrial Cancer: From Biological to Clinical Approaches* Massimo Nabissi,Frederic Amant,Paola Gehrig,2019-09-26 In developed countries cancer of the endometrium EC is the most common cancer of the female reproductive organs affecting mainly postmenopausal women The highest incidence of EC is in Northern America and Europe but its incidence is growing around the world Several factors influence the risk of developing EC including impaired hormone levels obesity physical activity family history and having been diagnosed with breast or ovarian cancer in the past For EC a standard screening test does not exist It is often diagnosed at stage I II due to frequent vaginal bleeding while invasive EC stage III IV is mainly diagnosed in its advanced stage Despite the different clinical improvements when EC is progressed to the advanced metastatic stage the patients still have poor prognoses and unsatisfactory outcomes with conventional chemotherapy The need for precision drugs is underscored by the limited number of options these patients have So the introduction of new techniques and the discovery of new biological characteristics such as identification of transcriptome proteome and metabolomics profiles and new potential diagnostic prognostic biomarkers are fundamental to improve our knowledges on EC The scope of this Research Topic is to welcome articles and reviews from clinicians and scientists around the world in order to give an updated vision of the recent clinical insights technical advances and cellular and molecular targets related to endometrial cancer Dedicated to Mr Dario Conti which supported endometrial cancer research *Success in Academic Surgery: Basic Science* Catherine J. Hunter,Vikas Dudeja,2025-06-24 This book advises the reader on the mechanics of starting a basic science research career as an academic surgeon Written by established content experts the chapters are both comprehensive and practical in their approach The book includes a suggested timeline for the initial academic appointment including how to setup and fund the laboratory and identifying appropriate scientific mentors and lab personnel It also describes the application of basic and advanced research techniques including animal models flow cytometry gene editing tissue engineering and microbiome analysis *Success in Academic Surgery Basic Science* is an essential guidebook for senior residents or fellows approaching their first academic appointment young faculty in the process of establishing their research career and more senior investigators interested in expanding their research horizons **Scientific and Technical Aerospace Reports** ,1995

**Success in Academic Surgery: Basic Science** Gregory Kennedy,Ankush Gosain,Melina Kibbe,Scott A. LeMaire,2019-04-29 This updated volume provides the foundation for starting a basic science research career as an academic surgeon Taking a practical approach the book covers the suggested timeline for the initial academic appointment including how to setup and fund the laboratory and identifying appropriate scientific mentors and lab personnel It also

describes the application of basic and advanced research techniques including animal models flow cytometry gene editing tissue engineering and microbiome analysis Success in Academic Surgery Basic Science aims to give guidance on the application of basic and advanced techniques in surgical research This book is relevant to senior residents and fellows approaching their first academic appointment as well as more senior investigators interested in expanding their research horizons *Methods of Microarray Data Analysis II* Simon M. Lin, Kimberly F. Johnson, 2007-05-08 Microarray technology is a major experimental tool for functional genomic explorations and will continue to be a major tool throughout this decade and beyond The recent explosion of this technology threatens to overwhelm the scientific community with massive quantities of data Because microarray data analysis is an emerging field very few analytical models currently exist *Methods of Microarray Data Analysis II* is the second book in this pioneering series dedicated to this exciting new field In a single reference readers can learn about the most up to date methods ranging from data normalization feature selection and discriminative analysis to machine learning techniques Currently there are no standard procedures for the design and analysis of microarray experiments *Methods of Microarray Data Analysis II* focuses on a single data set using a different method of analysis in each chapter Real examples expose the strengths and weaknesses of each method for a given situation aimed at helping readers choose appropriate protocols and utilize them for their own data set In addition web links are provided to the programs and tools discussed in several chapters This book is an excellent reference not only for academic and industrial researchers but also for core bioinformatics genomics courses in undergraduate and graduate programs
