Conservation Of Fish And Shellfish Resources Managing Diversity:

Conservation of Fish and Shellfish Resources J. E. Thorpe, Graham A.E. Gall, Jim E. Lannan, Colin E. Nash, 1995-06-20 Fish and shellfish comprise annually nearly 70 million tons of the world's edible animal protein. However, because of this demand, previously vast stocks have often been exhausted to the point of near extinction. The first book of its kind in the area of freshwater marine biodiversity, this extensive work reviews the present status of genetic resource management, its needs and constraints, various intervening human factors such as pollution and overfishing, and problems posed by different species and life styles. This discussion of the conservation of fish and shellfish resources is illustrated by four diverse groups: Atlantic salmon, cupped oysters, common carp, and Nile tilapia. These results produced by the collaboration of nine leading population and production geneticists, aquaculturists, and behavioral and developmental ecologists should become a fundamental resource useful to biologists, scientists, and advisors exploring current issues in the fishery sciences. Four-page color plate section. Database of key organizations for contact purposes. Foreword by Dr. Mike Strauss, Am. Assoc. for the Advancement of Science, and Dr. Peter Day, Rutgers University. Four in-depth case studies by international experts. Editors are major names in marine, freshwater, fisheries science. Originally sponsored and reviewed by U.S. National Academy of Sciences.

Hallerman, 2017-06-08 The aim of this book is to systematize and discuss population genetic studies of freshwater fish in a region that harbors the greatest diversity of species among all inland water ecosystems. This volume explores the genetic evaluation for a number of orders, families, and species of Neotropical fishes and provides an overview on genetic resources and diversity and their relationships with fish domestication, breeding, and food production.
