Maitland, 2012-12-06 In this book the authors have applied research knowledge to the solution of practical problems facing wildlife conservation in freshwater habitats Subjects covered include evaluation of the conservation interest of sites practical protection and management of freshwater habitats species conservation

Methods of Environmental Impact Assessment Peter Morris, Riki Therivel, 2001-08-23 Offers a comprehensive coverage of the methods used in environmental impact assessment which is now firmly established as an obligatory procedure in proposing or launching any development project with possible impacts on the environment

Methods of Environmental Impact Assessment , **Ecology and Conservation of Southeast Asian Marine and Freshwater Environments including Wetlands** A. Sasekumar, Nissim Marshall, D.J. Macintosh, 2012-12-06 A major concern among ecologists in and outside the ASEAN region is the degradation of the environment and the overexploitation of freshwater and marine resources There is as yet no indication that freshwater and marine resources are being managed on a sustainable basis and loss of wetlands whether freshwater swamps or mangrove swamps is a major problem in the ASEAN region Reclamation of mangrove swamps for aquaculture and agriculture seems to be a continuous activity here and the status of marine parks should also be examined in the light of recent resort development activities on small islands This volume contains numerous recommendations for the promotion of ecological studies and regional cooperation in marine freshwater ecology and conservation with special emphasis on the common water masses like the Strait of Malacca Gulf of Thailand and the South China Sea

Freshwater Fisheries Ecology John F. Craig, 2016-01-12 Inland fisheries are vital for the livelihoods and food resources of humans worldwide but their importance is underestimated probably because large numbers of small local operators are involved Freshwater Fisheries Ecology defines what we have globally what we are going to lose and mitigate for and what given the right tools we can save To estimate potential production the dynamics of freshwater ecosystems rivers lakes and estuaries need to be understood These dynamics are diverse as are the earths freshwater fisheries resources from boreal to tropical regions and these influence how fisheries are both utilized and abused Three main types of fisheries are illustrated within the book artisanal commercial and recreational and the tools which have evolved for fisheries governance and management including assessment methods are described The book also covers in detail fisheries development providing information on improving fisheries through environmental and habitat evaluation enhancement and rehabilitation aquaculture genetically modified fishes and sustainability The book thoroughly reviews the negative impacts on fisheries including excessive harvesting

climate change toxicology impoundments barriers and abstractions non native species and eutrophication Finally key areas of future research are outlined Freshwater Fisheries Ecology is truly a landmark publication containing contributions from over 100 leading experts and supported by the Fisheries Society of the British Isles The global approach makes this book essential reading for fish biologists fisheries scientists and ecologists and upper level students in these disciplines Libraries in all universities and research establishments where biological and fisheries sciences are studied and taught should have multiple copies of this hugely valuable resource About the Editor John Craig is Editor in Chief of the Journal of Fish Biology and has an enormous range of expertise and a wealth of knowledge of freshwater fishes and their ecology having studied them around the globe including in Asia North America Africa the Middle East and Europe His particular interests have been in population dynamics and life history strategies He is a Fellow of the Linnean Society of London and the Royal Society of Biology

Conservation Monitoring in Freshwater Habitats Clive Hurford,Michael Schneider,Ian Cowx,2009-12-09 As in the terrestrial environment most data collection from freshwater habitats to date falls into the survey surveillance or research categories The critical difference between these exercises and a monitoring project is that a monitoring project will clearly identify when we need to make a management response A Model for Conservation Management and Monitoring Monitoring as defined by Hellawell is essentially a tool of practical conservation management

and Fig 1 1 shows a simple but effective model for nature conservation management and monitoring The need for clear decision making is implicit in this model First we must decide what would represent a favourable state for the key habitat or species and then we must decide when to intervene if the state is or becomes unfavourable A third often overlooked but equally important decision concerns when we would consider the habitat or species to have recovered this is unlikely to be the same point that we became concerned about it This decision not only has resource implications it can also have major implications for other habitats and species prey species are an obvious example All of these decisions are essential to the development of an efficient and effective monitoring project **New Zealand Journal of Ecology**,1998 *Water Resources Quality* Hillel Rubin,Peter Nachtnebel,Josef Fürst,Uri Shamir,2012-12-06 This monograph results from the 4th International Austrian Israeli Technion Symposium cum Industrial Forum under the banner of the Austrian Technion Society initiative Technology for Peace Science for Mankind which was held in Vienna 23 25 April 200 I devoted to Preservation of the Quality of our Water Resources The Symposium was a cooperative effort with the Austrian Federal Ministry of Education and Science and Culture and the Austrian Federal Ministry of Economy and Labor The program was structured and managed by a joint Program Committee incorporating the editors of this monograph who are faculty members from the Stephan and Nancy Grand Water Research Institute at the Technion Israel Institute of Technology and the University of Agricultural Sciences Bodenkultur of Vienna The Symposium attracted participation from universities research institutes industries and national authorities from Austria Germany Greece Hungary Israel Jordan Palestinian Autonomy Poland Russia Spain Turkey USA and Uzbekistan The Symposium topics were of major international interest and talks were at a high professional level Therefore I have gladly accepted the initiative of the Symposium Program Committee to extend and expand manuscripts of special merit to chapters of this monograph whose title is identical to that of the Symposium Out of the 39 papers presented at the Symposium 24 papers were selected for inclusion in this monograph according to their scientific merit and quality of contribution to the overall subject Those selected were expanded and subjected to peer review for inclusion in this Volume
