Conservation of Paintings Gustav A. Berger, 2000

Conservation of Painting Gustav Berger, William Russell, 2000

Gustav Berger internationally recognized as one of the most innovative thinkers in the field of painting conservation offers the reader fresh insights into his deliberations over conservation problems and treatments. He is best known for his development of BEVA, an adhesive specifically formulated for use in conservation and for his groundbreaking research in the cracking of paint. Included in this book are updated and revised descriptions of landmark investigations and approaches as well as observations on how the results have fared. Anyone interested in the development of modern conservation practice will find this volume an invaluable reference and a fascinating read. The wealth of experience brought together in one volume and the striking contribution that Berger has made as an independent conservator make this book worth reading. *Studies in Conservation* 3 2001 224. This book should take its place alongside the great reference works of the 20th century. *Journal of the Canadian Association for Conservation* 2002 Vol 27.

Conserving Canvas Cynthia Schwarz, Ian McClure, Jim Coddington, 2023-07-25. The most authoritative publication in nearly fifty years on the subject of conserving paintings on canvas. In 2019, Yale University with the support of the Getty Foundation held an international conference where nearly four hundred attendees from more than twenty countries gathered to discuss a vital topic: how best to conserve paintings on canvas. It was the first major symposium on the subject since 1974 when wax resin and glue paste lining reigned as the predominant conservation techniques. Over the past fifty years, such methods, which were often destructive to artworks, have become less widely used in favor of more minimalist approaches to intervention. More recent decades have witnessed the reevaluation of traditional practices as well as focused research supporting significant new methodologies, procedures, and synthetic materials for the care and conservation of paintings on fabric supports. *Conserving Canvas* compiles the proceedings of the conference, presenting a wide array of papers and posters that provide important global perspectives on the history, current state, and future needs of the field. Featuring an expansive glossary of terms that will be an invaluable resource for conservators, this publication promises to become a standard reference for the international conservation community. The free online edition of this open access publication is available at getty.edu/publications/conserving_canvas. Also available are free PDF and EPUB downloads of the book.

Scientific Investigation of Copies, Fakes and Forgeries Paul T. Craddock, 2009. *Scientific Investigation of Copies, Fakes and Forgeries* is a comprehensive guide to the technical and scientific study of the authenticity of a wide range of antiquities and artworks. It is the first book to provide a full survey of the subject of forgery from a scientific basis, examining a wide range of materials and techniques. The demand for copies, fakes, and forgeries is driven by rising prices in an international marketplace. The book examines the available new technologies and ever more sophisticated forging techniques, looking at production and distribution of fraudulent artworks. The subject is exemplified by numerous internationally based case studies, some turning out not to be as conclusive as is

sometimes believed The book is aimed at those who need to understand the available approaches to and methods of scientific and technical authentication be they curator collector conservator or scientist Book Jacket Collection Care/Sammlungspflege Gabriela Krist,2015-05-21 Prevention is an attempt to look into the future and have a positive influence on it therefore it is one of the most important aspects in the area of collection care the central current field of applied research in conservation and restoration With sustainability damage and loss are avoided dangers averted and research conducted Collection care is only successful if the theory is appropriately implemented in museum practice

A variety of scientific disciplines provide tools and methods that are crucial in reconstructing humanity's past and in preserving material remains that witness the evolution of human culture. Geology reconstructs the history of terrestrial environments critical for the evolution and dispersal of humans. Chemistry explains reactions that modify materials left by human activities, including the destructive effects of pollution. Biology has a critical role in archaeology, particularly with the recent advance in analysis of DNA in ancient organic materials.
