Conserving Biodiversity A Research Agenda For Development Agencies:

Conserving Biodiversity National Research Council, Board on Science and Technology for International Development, 1992-02-01 The loss of the earth's biological diversity is widely recognized as a critical environmental problem. That loss is most severe in developing countries where the conditions of human existence are most difficult. Conserving Biodiversity presents an agenda for research that can provide information to formulate policy and design conservation programs in the Third World. The book includes discussions of research needs in the biological sciences as well as economics and anthropology areas of critical importance to conservation and sustainable development. Although specifically directed toward development agencies, non-governmental organizations and decisionmakers in developing nations, this volume should be of interest to all who are involved in the conservation of biological diversity. **Conserving Biodiversity**, 1992

Conserving Biodiversity National Research Council Staff, 1992 **Ethnobotany** Gary J. Martin, 2014-07-29 Ethnoecology has blossomed in recent years into an important science because of the realization that the vast body of knowledge contained in both indigenous and folk cultures is being rapidly lost as natural ecosystems and cultures are being destroyed by the encroachment of development. Ethnobotany and ethnozoology both began largely with direct observations about the ways in which people used plants and animals and consisted mainly of the compilation of lists. Recently these subjects have adopted a much more scientific and quantitative methodology and have studied the ways in which people manage their environment and as a consequence have used a much more ecological approach. This manual of ethnobotanical methodology will become an essential tool for all ethnobiologists and ethnoecologists. It fills a significant gap in the literature and I only wish it had been available some years previously so that I could have given it to many of my students. I shall certainly recommend it to any future students who are interested in ethnoecology. I particularly like the sympathetic approach to local peoples which pervades this book. It is one which encourages the ethnobotanical work by both the local people themselves and by academically trained researchers. A study of this book will avoid many of the arrogant approaches of the past and encourage a fair deal for any group which is being studied. This manual promotes both the involvement of local people and the return to them of knowledge which has been studied by outsiders. **Cultural Memory and Biodiversity**

Virginia D. Nazarea, 2006-01-26 Seed and gene banks have made great strides in preserving the biological diversity of traditional agricultural plant species but they have tended to ignore a serious component: the knowledge about those crops and methods of farming held by the people who have long raised them. Virginia Nazarea now makes a case for preserving cultural memory along with biodiversity. By exploring how indigenous people farm sweet potatoes in Bukidnon, Philippines, she discovers specific ways in which the conservation of genetic resources and the conservation of culture can support each other. Interweaving a wealth of ecological and cognitive data with oral history, Nazarea details a memory banking protocol for collecting and conserving cultural information to complement the genetic, agronomic and biochemical characterization of

important crops She shows that memory banking offers significant benefits for local populations not only the preservation of traditional knowledge but also the maintenance of alternatives to large scale agricultural development and commercialization She also compares alternative forms of germplasm conservation conducted by a male dominated hierarchy with those of an informal network of migrant women Cultural Memory and Biodiversity establishes valuable guidelines for people who aspire to support community based in situ conservation of local varieties Perhaps more important it shows that the traditional methods of local farmers are often as important as the advanced methods encouraged by advocates of modernization

A. Perrings, 2012-12-06 This volume is one of a number of publications to carry the results of the first research programme of the Royal Swedish Academy of Science s Beijer Institute The Institute was formed in 1991 in order to promote interdisciplinary research between natural and social scientists on the interdependency between economic and ecological systems In its first research programme the Biodiversity Programme the Institute brought together a number of leading economists and ecologists to address the theoretical and policy issues associated with the current high rates of biodiversity loss in such systems whether the result of direct depletion the destruction of habitat or specialisation in agriculture forestry and fisheries l This volume reports some of the more policy oriented work carried out under the programme The broad aim of the programme is to further our understanding of the causes and consequences of biodiversity loss and to identify the options for addressing the problem The results have turned out to be surprising to those who see biodiversity loss primarily in terms of the erosion of the genetic library In various ways the work carried out under the programme has already begun to alter our perception of where the problem in biodiversity loss lies and what policy options are available to deal with it Indeed the programme has provided a powerful set of arguments for reappraising not just the economic and ecological implications of biodiversity loss but the whole case for development based on specialisation of resource use **Hearing a Different Drummer** John Studley, 2007 It is becoming increasingly apparent that virtually all aspects of diversity are in steep decline Indigenous knowledge systems biodiversity and cultural diversity three interacting

interdependent systems are all threatened with extinction throughout the world This book explores the diversity crisis from the perspective of forestry It introduces an emerging vision known as the endogenous realisation of aspirations ERA that attempts to enhance well being and biocultural diversity by building on local or endogenous ambitions and dreams Based on research in the Kham region of south western China the author offers some practical methods for allowing development professionals to develop an understanding of and empathy for the local cultures within which they work as well as to identify and understand local forest concepts and values He also offers some policy recommendations for incorporating this approach more widely into development practice The Postcolonial Science and Technology Studies Reader Sandra

Harding,2011-09-12 A collection of foundational and contemporary essays in postcolonial science studies Transforming Education and Development Policies for Pastoralist Communities in Kenya Ibrahim Oanda Ogachi,2011 This study is a contribution towards exploring alternative but sustainable education policies for pastoralist societies and sets out to explore how pastoralist IKSs Indigenous Knowledge Systems can be integrated or used as an entry point to provide formal schooling to pastoralist communities in Kenya Pastoralists constitute the majority of the socially and economically vulnerable groups in the country Children among pastoralist communities face detrimental hardships that compromise their growth and development One of these hardships is the imposition of an education and development paradigm that is irrelevant to their existence and which compounds their problems This study therefore sought to explore how through better government policies the indigenous knowledge IK of pastoralists could be integrated into the curriculum of formal schooling Specifically the study discusses the following issues Gaps in policies for schooling provision for pastoralist groups with particular reference to the content of the curriculum and methods of delivery Aspects of pastoralist IKS that can be integrated into the context of national education policy to enrich their schooling within and General recommendations regarding the use of participatory and social engineering approaches in designing education and development policies affecting pastoralist communities in Kenya Drugs of Natural Origin Anthony Artuso,2013-10-14 Despite the growing interest in biodiversity as a source of valuable new products and biochemical information there have been very few systematic efforts to estimate the value of preserving biological resources for this purpose Drugs of Natural Origin gives you a detailed model of the value of wild biological resources for pharmaceutical research and development Author Anthony Artuso presents several decision models and analytical techniques that you can use to assess the economics of biochemical prospecting efforts whether you re part of a private corporation nonprofit research institute developing country government or international organization Drugs of Natural Origin explores the policy options available to developing countries and international organizations to tap into the emerging market for biological resources in such a way as to provide both incentives for conservation of biodiversity and new opportunities for economic development You ll find evaluations of a range of proactive strategies that can be used to protect and enhance developing countries biological resources In addition you ll learn about a bioeconomic model that incorporates

the potential biochemical and genetic value of a diverse ecosystem into land use planning and development. Developing country and international policymakers will find *Drugs of Natural Origin* a useful tool for determining how best to conserve biodiversity while sustainably developing biological resources. This book outlines a comprehensive and integrated set of policy measures, research and development initiatives, and financing arrangements that could increase biochemical research activity while providing incentives for conservation of biodiversity and a potential path for sustainable development. Managers of pharmaceutical R D programs will use the decision models developed in *Drugs of Natural Origin* to plan, evaluate, and continually refine their R D programs. The book's theoretic framework provides you with an analytical tool for systematically evaluating critical decisions at each stage of the R D process. Thus you learn to incorporate both subjective assessments and quantitative data into a comprehensive framework for R D decisionmaking.

Biology Related to Environmental Studies Ahilya Bandopadhyay, 2025-01-23 *Biology Related to Environmental Studies* explores the intersection of biology and ecology, focusing on how species interact with their environment and the impact of human activities on ecosystems. The book addresses critical environmental challenges such as air and water pollution, deforestation, biodiversity loss, soil degradation, resource depletion, climate change, and genetically modified organisms. These pressing issues, intensified by industrialization and urbanization, threaten global ecosystems and require urgent solutions. This book provides a clear understanding of fundamental ecological principles, environmental monitoring processes, and innovative methods for addressing current environmental problems. It emphasizes the importance of conservation, restoration, and the role of environmental biologists in preserving wildlife and assessing human impacts on nature. With a progressive approach, it integrates concepts of evolution, ecology, and sustainability, equipping students with the knowledge and tools to contribute to environmental protection and sustainable development.

Applying Ecological Principles to Land Management Virginia H. Dale, Richard A. Haeuber, 2011-06-27 This volume applies ecological principles and guidelines to understand past and current land use and land management and more importantly endeavors to promote more ecologically sound approaches to future land use and management decisions. The volume incorporates case studies from a wide variety of disciplines and perspectives. The case studies explore past and current land use decisions on both public and private lands and include practical approaches and tools for land use decision making. Perhaps the most important feature of the book is the linking of ecological theory and principle with applied land use decision making; the theoretical and empirical are joined through concrete case studies of actual land use decision making processes. In this volume, readers will find a statement of fundamental ecological principles that are relevant for land use planning and management, coupled with multiple in-depth explorations of the application of these principles in action. In addition, most case studies describe specific tools and approaches for incorporating endeavors to join fundamental ecological knowledge with cutting edge application in order to both educate and provide concrete guidance for decision making. The intended audience is broad and multidisciplinary, from undergraduate and

graduate level courses in environmental studies to professional land use planners **The Elgar Companion to Geography, Transdisciplinarity and Sustainability** Fausto O. Sarmiento, Larry M. Frolich, 2020-05-29 With contributions from top geographers this Companion frames sustainability as exemplar of transdisciplinary science critical geography while improving future scenarios debating perspectives between rich North poor South modern urban backwards rural and everything in between The Companion has five sections that carry the reader from foundational considerations to integrative trends to resources use and accommodation to examples highlighting non traditional pathways to a postscript about cooperation of the industrialized Earth and a prognosis of the road ahead for the new geographies of sustainability

Ethnobotany and the Search for New Drugs Derek J. Chadwick, Joan Marsh, 2008-04-30 A compilation of articles by prominent experts in their respective fields on compensation for and collaboration with indigenous people in regard to their knowledge and provision of rare plants which are used for some of the most potent drugs in Western medicine

Post-Treaty Politics Sikina Jinnah, Oran R. Young, 2014-10-31 An argument that secretariats the administrative arms of international treaties are political actors in their own right Secretariats the administrative arms of international treaties would seem simply to do the bidding of member states And yet Sikina Jinnah argues in *Post Treaty Politics* secretariats can play an important role in world politics On paper secretariats collect information communicate with state actors and coordinate diplomatic activity In practice they do much more As Jinnah shows they can influence the allocation of resources structures of interstate cooperation and the power relationships between states Jinnah examines secretariat influence through the lens of overlap management in environmental governance how secretariats help to manage the dense interplay of issues rules and norms between international treaty regimes Through four case studies she shows that secretariats can draw on their unique networks and expertise to handle the challenges of overlap management emerging as political actors in their own right After presenting a theory and analytical framework for analyzing secretariat influence Jinnah examines secretariat influence on overlap management within the Convention on Biological Diversity CBD two cases of overlap management in the World Trade Organization as well as a case in which the Convention on International Trade in Endangered Species CITES secretariat failed to influence political outcomes despite its efforts to manage overlap Jinnah argues that even when modest secretariat influence matters because it can establish a path dependent dynamic that continues to guide state behavior even after secretariat influence has waned *Seventh Symposium on Systems Analysis in Forest Resources, Traverse City, Michigan, USA, May 28-31, 1997* ,2000 General Technical Report NC. ,1981
