Consolation Of Ontology On The Substantial And Nonsubstantial Models:

The Consolation of Ontology Egon Bondy, 2001-01-01 In the *Consolation of Ontology* Czech poet philosopher Egon Bondy examines the substantial model of reality the notion that there is some sort of substance some thing idea being or principle that creates underlies transcends or gives meaning to the universe in which we live He shows how the substantial model in both its theistic and mechanical materialist versions is logically untenable and dangerous in its consequences From there Bondy shows how the nonsubstantial alternative prefigured in the thinking of cultures that developed independently of Greece is simpler and more logically consistent More importantly it is free from the negative consequences of the substantial model and instead opens the way toward genuine human freedom creativity and responsibility toward a corresponding and supportive form of social organization and toward an unclouded understanding of ontological reality Previously untranslated the book asks that we leave behind comfortable assumptions and understand how the struggles for a genuinely human future and for ontological clarity presuppose each other and are mutually interdependent *Social Theory and Asian Dialogues* Ananta Kumar Giri, 2018-03-30 Critically exploring the presuppositions of contemporary social theory this collection argues for a trans civilizational dialogue and a deepening of the universe of intellectual discourse in order to transform sociology into a truly planetary conversation on the human condition Focusing on perspectives from Asia notably East Asia and India it interrogates presuppositions in contemporary critical social theory about man culture and society and considers central themes such as knowledge and power knowledge and liberation The diverse contributions tackle key questions such the globalization of social theory identity and society in east asia as well as issues such as biopolitics social welfare and eurocentrism They also examine dialogues along multiple trajectories between social theorists from the Euro American world and from the Asian universe such as between Kant and Gandhi Habermas and Sri Aurobindo the Bildung tradition in Europe and the Confucian traditions Arguing for a global comparative engagement and cross cultural dialogue this is a key read for all those interested in the future of social theory in the wake of globalization and the rise of the global south The Philosophy of Nicholas of Cusa Pavel Floss, 2020-05-13 Out of the broad variety of Cusanus work this book discusses six of his writings careful not to isolate them from the whole of his work It instead presents them against the maturation of Cusanus thinking as it developed from his first sermons up to his shortest philosophical text *De apice theoriae* The texts in question are *De docta ignorantia* *De coniecturis* *Idiota de mente* *De beryllo* *Triologus de possest* and *De apice theoriae* In the search for God or rather in Cusanus lifetime efforts to have his spirit touch the first principle and the basis of all things new perspectives on the world and man within would open up for Cusanus Respecting this basic intention of Cusanus thinking the author primarily deals with Cusanus ontotheological metaphysical claims and in their context turns his attention to the cosmological or anthropologico gnoseological opinions Karel Kosík and the Dialectics of the Concrete, 2021-12-06 Karel Kosík 1926 2003 was one of the most remarkable Czech Marxist philosophers of the twentieth century His reputation as a

creative thinker is owed largely to his philosophical blockbuster *Dialectics of the Concrete* first published in Czechoslovakia in 1963 In reintroducing Kos k s philosophy to English speaking readers we show that Kos k s work is important not only as a leading intellectual document of the Prague Spring but also as an original theoretical contribution with international impact that sheds light on the meaning of labour and praxis cognition and economic structure and revolution and the crises of modernity Contributors include Ian Angus Siyaves Azeri V t Barto Jan ern Joseph Grim Feinberg Diana Fuentes Gabriella Fusi Tom Hermann Tom H bek Xiaohan Huang Peter Hudis Petr Ku el Ivan Landa Michael L wy Jan Mervart Anselm K Min Tom Rockmore Francesco Tava and Xinruo Zhang

Ontology Makes Sense Claudio Masolo, Laure Vieu, 2019-04-15 Nicola Guarino is widely recognized as one of the founders of applied ontology His deep interest in the subtlest details of theoretical analysis and his vision of ontology as the Rosetta Stone for semantic interoperability guided the development and understanding of this domain His motivations in research stem from the conviction that all science must be for the benefit of society at large and his motto has always been that ontologies are not just for making information systems interoperable but more importantly for ensuring that systems users understand each other He was among the first to recognize that applied ontology

must be an interdisciplinary enterprise if it is to capture the intended meaning of the terms used by an information system. This book is a collection of essays written in homage to Nicola Guarino a tribute to his many scientific contributions to the discipline of applied ontology. The papers presented here reflect the wide variety of research topics that marked Nicola's impact on the applied ontology community. They are grouped according to the five general areas addressed by Nicola in his career: what is an ontology; knowledge engineering; ontologies and language; ontological categories and relationships; and ontologies and applications. Nicola Guarino's work and dedication will undoubtedly continue to influence the applied ontology community and this book will be of interest to the many researchers aiming to establish ontologically sound bases for their research areas.

Ontology, Epistemology, and Teleology for Modeling and Simulation Andreas Tolk, 2012-08-11. In this book internationally recognized experts in philosophy of science, computer science, and modeling and simulation are contributing to the discussion on how ontology, epistemology, and teleology will contribute to enable the next generation of intelligent modeling and simulation applications. It is well understood that a simulation can provide the technical means to display the behavior of a system over time, including following observed trends to predict future possible states, but how reliable and trustworthy are such predictions? The questions about what we can know, ontology, how we gain new knowledge, epistemology, and what we do with this knowledge, teleology, are therefore illuminated from these very different perspectives as each expert uses a different facet to look at these challenges. The result of bringing these perspectives into one book is a challenging compendium that gives room for a spectrum of challenges from general philosophy questions such as: can we use modeling and simulation and other computational means at all to discover new knowledge? down to computational methods to improve semantic interoperability between systems or methods, addressing how to apply the recent insights of service-oriented approaches to support distributed artificial intelligence. As such, this book has been compiled as an entry point to new domains for students, scholars, and practitioners and to raise the curiosity in them to learn more to fully address the topics of ontology, epistemology, and teleology from philosophical, computational, and conceptual viewpoints.
