

3 Constituent structure

In chapter 1 we noted that morphology (the study of word structures) and syntax (the study of phrase and sentence structures) are generally treated as separate sub-fields in linguistics. This is because words and sentences are different in certain fundamental ways. After studying chapter 2 you have some idea of how we might represent the arrangement of morphemes in a word, at least in the simplest cases. Describing the arrangement of words in a sentence will require some additional concepts.

In this chapter we discuss two fundamental aspects of sentence structure. First, the words of any language can be classified according to their grammatical properties. These classes are traditionally referred to as parts of speech (noun, verb, etc.); linguists refer to them as syntactic categories. In describing the word-order patterns of the language, we need to refer to syntactic categories since it is obviously impossible to list every possible combination of specific words.

Second, the words in a sentence are not organized as a simple list. Rather, words cluster together to form groups of various sizes; these groups are referred to as constituents. The word-order patterns of human languages cannot be described adequately without reference to constituents.

In this chapter we will discuss the kinds of linguistic evidence we can use to identify constituents (groups of words) and categories (parts of speech). Then we will discuss “tree” diagrams, a commonly used method for representing both the grouping of words and the linear order of words in a sentence. But first, in order to see why these concepts are important, let us return to the issue addressed in chapter 1, namely the relation between form and meaning.

3.1 Ambiguity

Sometimes a sentence can have more than one meaning. Sentences of this type are said to be ambiguous, meaning that the same string of words can be interpreted in more than one way. Consider the following examples:

Constituent Structure A Study Of Contemp:

Studies in Contemporary Phrase Structure Grammar Robert D. Levine, Georgia M. Green, 1999 This book explores a wide variety of theoretically central issues in the framework of Head Driven Phrase Structure Grammar HPSG a major theory of syntactic representation particularly in the domain of natural language computation HPSG is a strongly lexicon driven theory like several others on the scene but unlike the others it also relies heavily on an explicit assignment of linguistic objects to membership in a hierarchically organised network of types where constraints associated with any given type are inherited by all of its subtypes This theoretical architecture allows HPSG considerable flexibility within the confines of a highly restrictive mathematically explicit formalism requiring no derivational machinery and invoking only a single level of syntactic representation The separate chapters consider a variety of problematic phenomena in German Japanese and English and suggest important extensions of and revisions to the picture of HPSG

Reconceiving Structure in Contemporary Music Judy Lochhead, 2015-06-19 This book studies recent music in the western classical tradition offering a critique of current analytical theoretical approaches and proposing alternatives The critique addresses the present fringe status of recent music sometimes described as crossover postmodern post classical post minimalist etc and demonstrates that existing descriptive languages and analytical approaches do not provide adequate tools to address this music in positive and productive terms Existing tools and concepts were developed primarily in the mid 20th century in tandem with the high modernist compositional aesthetic and they have changed little since then The aesthetics of music composition on the other hand have been in constant transformation Lochhead proposes new ways to conceive musical works their structurings of musical experience and time and the procedures and goals of analytic close reading These tools define investigative procedures that engage the multiple perspectives of composers performers and listeners and that generate conceptual modes unique to each work In action they rebuild a conceptual methodological and experiential place for recent music These new approaches are demonstrated in analyses of four pieces Kaija Saariaho's *Lonh* 1996 Sofia Gubaidulina's *Second String Quartet* 1987 Stacy Garrop's *String Quartet no 2 Demons and Angels* 2004 05 and Anna Clyne's *Choke* 2004 This book defies the prediction of classical music's death and will be of interest to scholars and musicians of classical music

COUNTERFACTUALS AND COMPARATIVE POSSIBILITY

In the last dozen years or so our understanding of modality has been much improved by means of possible world semantics: the project of analyzing modal language by systematically specifying the conditions under which a modal sentence is true at a possible world. I hope to do the same for counterfactual conditionals. I write $A \rightarrow C$ for the counterfactual conditional with antecedent A and consequent C . It may be read as *If it were the case that A then it would be the case that C* or some more idiomatic paraphrase thereof.

A Bibliovect Guide to the Literature in English and Theoretical Syntax Lawrence R. Smith, 1981

On the move Inge de Mönink, 2016-08-22. This book should be seen mainly as a contribution to the long standing tradition of English descriptive linguistics. It gives a complete account of the nature and frequency of possible noun phrase NP structures in contemporary British English including the ones that deviate from the prototypical description we find in handbooks of English. The book focuses on those NPs which are characterized by the fact that one or more of the constituents is not in its prototypical position but has moved. The detailed description of variant NPs is obtained through the careful combination of corpus data and experimental data. The book addresses the question how corpus data can be combined with intuitive data and offers a practical approach to the task: the multi method approach. In this approach corpus data are combined with intuitive data obtained from native speakers in an elicitation experiment.

In addition, in keeping with the symposium's US-Mexico location and commemoration of the twin quincentenaries of Columbus' first voyage and the publication of Nebrija's grammar, several papers focus on the history of linguistic theory, language contact, variation and change.
