Constructing Mathematical Knowledge Paul Ernest, 2012-10-12 First published in 1994 This book and its companion volume *Mathematics Education and Philosophy An International Perspective* are edited collections Instead of the sharply focused concerns of the research monograph the books offer a panorama of complementary and forward looking perspectives They illustrate the breadth of theoretical and philosophical perspectives that can fruitfully be brought to bear on the mathematics and education The emphasis of this book is on epistemological issues encompassing multiple perspectives on the learning of mathematics as well as broader philosophical reflections on the genesis of knowledge It explores constructivist and social theories of learning and discusses the role of the computer in light of these theories

The Construction of New Mathematical Knowledge in Classroom Interaction Heinz Steinbring, 2005-03-22 Mathematics is generally considered as the only science where knowledge is uniform universal and free from contradictions Mathematics is a social product a net of norms as Wittgenstein writes In contrast to other institutions traffic rules legal systems or table manners which are often internally contradictory and are hardly ever unrestrictedly accepted mathematics is distinguished by coherence and consensus Although mathematics is presumably the discipline which is the most differentiated internally the corpus of mathematical knowledge constitutes a coherent whole The consistency of mathematics cannot be proved yet so far no contradictions were found that would question the uniformity of mathematics Heintz 2000 p 11 The coherence of mathematical knowledge is closely related to the kind of professional communication that research mathematicians hold about mathematical knowledge In an extensive study Bettina Heintz Heintz 2000 proposed that the historical development of formal mathematical proof was in fact a means of establishing a communicable code of conduct which helped mathematicians make themselves understood in relation to the truth of mathematical statements in a coordinated and unequivocal way

The Mathematics in Our Hands Christina M Krause, 2016-01-08 In her empirical study Christina Krause investigates how gestures can contribute to epistemic processes in social interactions She expands the traditional speech based approach to analyzing social processes of constructing mathematical knowledge by employing a multimodal perspective Adopting a semiotic approach she takes into account two functions of gestures as signs used by the participants

of the social interaction the representational function concerns the ways in which gestures take part in referring to a mathematical object in processes of knowledge construction and the epistemic function relates to the ways in which they can contribute to the performance of collective epistemic actions The results of this study reveal that gestures influence the epistemic process significantly more than previously thought and indicate factors underlying this influence

Constructing Mathematical Knowledge Using Multiple Representations: A Case Study of a Grade One Teacher Limin Jao,2009 This study examined how an elementary teacher fostered student mathematical understanding and the strategies that she used to help students learn mathematical concepts A case study of a Grade 1 teacher is described based on qualitative data from interviews and classroom observation sessions using a peer coaching model The evidence from the study suggests that this teacher benefited from professional development opportunities to gain deeper insights regarding her teaching practices There were five major findings 1 enthusiasm for improving her practices was necessary to successfully meet her goals 2 this teacher s role in the classroom was important to facilitate the construction of knowledge 3 the classroom was an environment where her students felt safe 4 a variety of tasks and strategies that students of varied abilities interests and aptitudes can enjoy were used and 5 multiple representations including the use of manipulatives were used to scaffold the construction of knowledge **Mathematical Modelling**

Education and Sense-making Gloria Ann Stillman,Gabriele Kaiser,Christine Erna Lampen,2020-05-14 This volume documents on going research and theorising in the sub field of mathematics education devoted to the teaching and learning of mathematical modelling and applications Mathematical modelling provides a way of conceiving and resolving problems in people s everyday lives as well as sophisticated new problems for society at large Mathematical modelling and real world applications are considered as having potential for cultivating sense making in classroom settings This book focuses on the educational perspective researching the complexities encountered in effective teaching and learning of real world modelling and applications for sense making is only beginning All authors of this volume are members of the International Community of Teachers of Mathematical Modelling ICTMA the peak research body into researching the teaching and learning of mathematical modelling at all levels of education from the early years to tertiary education as well as in the workplace

Word Problems Harold Torrance,2001-01-15 Students will use creative thinking skills while determining and using basic math operations to solve the problems **Building Mathematical Comprehension: Using Literacy Strategies to Make Meaning** Sammons, Laney,2017-03-01 Apply familiar reading comprehension strategies and relevant research to mathematics instruction to aid in building students comprehension in mathematics This resource demonstrates how to facilitate student learning to build schema and make connections among concepts In addition it provides clear strategies to

help students ask good questions visualize mathematics and synthesize their understanding This resource is aligned to College and Career Readiness Standards

Moving Math Mary Fiore, Maria Luisa Lebar, 2017-10-17 Focus on moving the teaching and learning of mathematics by shifting instruction and assessment practices This unique book uses critical thinking skills inferring and interpreting analyzing evaluating making connections synthesizing reasoning and proving and reflecting to help students make sense of mathematical concepts and support numeracy

Dialogue and Learning in Mathematics Education Helle Alrø, Ole Skovsmose, 2006-01-02 Dialogue and Learning in Mathematics Education is concerned with communication in mathematics class rooms In a series of empirical studies of project work we follow students inquiry cooperation as well as students obstructions to inquiry cooperation Both are considered important for a theory of learning mathematics Special attention is paid to the notions of dialogue and critique A central idea is that dialogue supports critical learning of mathematics The link between dialogue and critique is developed further by including the notions of intention and reflection Thus a theory of learning mathematics is developed which is resonant with critical mathematics education

Invited Lectures from the 13th International Congress on Mathematical Education Gabriele Kaiser, Helen Forgasz, Mellony Graven, Alain Kuzniak, Elaine Simmt, Binyan Xu, 2018-02-05 The book presents the Invited Lectures given at 13th International Congress on Mathematical Education ICME 13 ICME 13 took place from 24th 31st July 2016 at the University of Hamburg in Hamburg Germany The congress was hosted by the Society of Didactics of Mathematics Gesellschaft f r Didaktik der Mathematik GDM and took place under the auspices of the International Commission on Mathematical Instruction ICMI ICME 13 the biggest ICME so far brought together about 3500 mathematics educators from 105 countries additionally 250 teachers from German speaking countries met for specific activities The scholars came together to share their work on the improvement of mathematics education at all educational levels The papers present the work of prominent mathematics educators from all over the globe and give insight into the current discussion in mathematics education The Invited Lectures cover a wide spectrum of topics themes and issues and aim to give direction to future research towards educational improvement in the teaching and learning of mathematics education This book is of particular interest to researchers teachers and curriculum developers in mathematics education

Constructing Scientific Understanding Through Contextual Teaching Peter Heering, Daniel Osewold, 2007-01-01 Learning by Doing is about the history of experimentation in science education The teaching of science through experiments and observation is essential to the natural sciences and its pedagogy These have been conducted as both demonstration or as student exercises The experimental method is seen as giving the student vital competence skills and experiences both at the school and at the university level This volume addresses the historical development of experiments in science education which has been largely neglected so far The contributors of Learning by Doing pay attention to various aspects ranging from economic aspects of instrument making for science teaching to the political meanings of experimental science education from the 17th to the 20th

century This collected volume opens the field for further debate by emphasizing the importance of experiments for both historians of science and science educators Presentation de l'éditeur

Creating Contexts for Learning and Self-authorship Marcia B. Baxter Magolda, 1999 This book is intended to help college faculty create conditions in which students learn to construct knowledge in their disciplines and achieve self authorship A significant and often overlooked dimension mediating learning and self authorship centers on learners ways of knowing or their assumptions about the nature limits and certainty of knowledge A learner who assumes that all knowledge is certain expects to hear answers from an authority figure in contrast a learner who views knowledge as relative expects to explore multiple viewpoints By taking a constructive developmental approach the author demonstrates how students ability to construct knowledge is intertwined with the development of their assumptions about knowledge itself and their role in creating it She shows how the structure of constructive developmental teaching hinges on three principles validating students ability to know situating learning in students experience and defining learning as teachers and students mutually constructing meaning The book also takes abstract pedagogical principles and translates them into practical approaches

Teaching Mathematics Through Story Caroline McGrath, 2014-06-27 This book explores the exciting ways in which story can be used as a flexible resource to facilitate children s mathematical thinking It looks at the potential relationship between story and mathematics and practically demonstrates how they can be combined to help children connect understand and express mathematical ideas using story language This book draws on practical work with children educators parents professional storytellers and trainee practitioners who bring theoretical ideas to life and offer insight into their mathematical story experiences It is a must have for all those who want to make mathematics relevant accessible and imaginative for young children

Learning Mathematics in the Context of 3D Printing Frederik Dilling, Felicitas Pielsticker, Ingo Witzke, 2023-03-01 The volume presents a collection of articles on the use of 3D printing technology in mathematics education and in mathematics teacher training It contains both basic research oriented contributions as well as reflected descriptions of concrete developments for teaching The authors of this compilation share a positive attitude towards the possibilities that the use of 3D printing technology understood as an interplay of software and hardware can unfold for mathematics education but critically evaluate from a mathematics education research perspective when where and how an application can enable an added value for the learning of a mathematical content
