This book reviews creative technologies that underpin the human activities of converting data and information into knowledge creating new ideas based on that knowledge and validating those ideas The book calls such creative technology knowledge technology and explores its challenges in the age of big data Today artificial intelligence and big data are successfully performing pattern recognition and decision making on behalf of humans who are incapable of processing large amounts of information instantly and accurately In using only past data however there are limits to future predictions with artificial intelligence and big data Humans need to take the lead in predicting or creating the future by trying to understand

why data emerged Knowledge technology contributes to that understanding regardless of the field of origin As a matter of fact knowledge technology includes many technologies developed in informatics management study and systems science The desirable features of knowledge technology are the complementary use of rational and intuitive approaches the integration of results from quantitative and qualitative analyses and the cooperation between artificial intelligence and humans

**Construction Dispute Research** Sai On Cheung,2014-07-08 There are three specific purposes of Construction Dispute Research First this volume aims to summarise studies on construction dispute Second apart from the theoretical constructs where appropriate empirical tests are also included This approach serves to go beyond the commonly used anecdotal approach for the subject matters Third it is the sincere hope of the authors that this book will help shaping research agenda of construction dispute The studies are mostly framed from a management perspective drawing on methods and concepts in contract law economics psychology and management science The book has twenty chapters that are arranged in four parts covering conceptualisation avoidance negotiation and mediation Part 1 is devoted for dispute conceptualisation A building is only as strong as its foundation Thus it is no better start to study construction dispute by conceptualisation The theme of Part 2 is dispute avoidance The conventional wisdom of prevention is better than cure seems can be applied to all problems As far as construction dispute is concerned equitable risk allocation and trust are the two most commonly accepted avoidance strategies Part 3 focuses on negotiation that is the gateway to resolution as almost all disputes are negotiated first before the service of other mechanisms Negotiation is sometimes described as an art because settlement may not be obtained solely from legal and rational approaches Part 3 discusses the behavioral dimensions of construction dispute negotiation Part 4 deals with Mediation a form of assisted negotiation Specially the skill of the mediators in facilitating settlement the interrelationships among dispute sources mediator tactics and mediation outcomes are explored The studies presented in Construction Dispute Research collectively demonstrate holistic approach in dispute management Each chapter can be read as a study on its own Practitioners will find the book a handy reference in dispute management and resolution Students would find the book useful in explaining in details the causes of dispute the processes to resolve them The research design and empirical approaches are particularly useful to students in construction management architectural surveying and civil engineering programs

**Building Business in Post-Communist Russia, Eastern Europe, and Eurasia** Dinissa Duvanova,2013-02-18 Prior to

1989 the communist countries of Eastern Europe and the USSR lacked genuine employer and industry associations After the collapse of communism industry associations mushroomed throughout the region Duvanova argues that abusive regulatory regimes discourage the formation of business associations and poor regulatory enforcement tends to encourage associational membership growth Academic research often treats special interest groups as vehicles of protectionism and non productive collusion This book challenges this perspective with evidence of market friendly activities by industry associations and their benign influence on patterns of public governance Careful analysis of cross national quantitative data spanning more than 25 countries and qualitative examination of business associations in Russia Ukraine Kazakhstan and Croatia shows that postcommunist business associations function as substitutes for state and private mechanisms of economic governance These arguments and empirical findings put the long standing issues of economic regulations public goods and collective action in a new theoretical perspective *Building Information Modeling in Pedagogy and Practice* Anne K. Anderson, Kevin R.

Miller, David E. Gunderson, 2025-08-11 The adoption of building information modeling BIM in both pedagogy and practice has experienced significant growth in the past decade As the use of BIM is being quantitatively and qualitatively shown to improve project outcomes many educators and practitioners are still struggling with how to incorporate BIM into curriculum training and current and future projects This book is a compilation of the best academic and research articles on the topic of BIM provides a resource for both educators and practitioners for understanding issues regarding BIM covers BIM topics such as BIM Execution Planning Collaboration Visualization Site Utilization Planning Safety Estimating Sequencing Coordination Clash Detections Integrated Project Delivery Legal considerations for BIM Industry Uses of BIM Sustainability Facilities Management Interoperability Modular Construction and Virtual Reality and includes a new introduction and conclusion *Building Information Modeling in Pedagogy and Practice* will be an invaluable resource for engaged academics and teaching practitioners interested in playing a key role in the future development of the building profession as well as undergraduate and postgraduate students wishing to understand the importance of BIM Most of the chapters in this book were originally published in the International Journal of Construction Education and Research Research Methodology in the Built Environment Vian Ahmed, Alex Opoku, Zeeshan Aziz, 2016-03-10 Built environment students are not always familiar with the range of different research approaches they could be using for their projects Whether you are undertaking a postgraduate doctoral programme or facing an undergraduate or masters dissertation this book provides general advice as well as 13 detailed case studies from 16 universities in 7 countries to help you get to grips with quantitative and qualitative methods mixed methods of data collection action research and more Advances in Informatics and Computing in Civil and Construction Engineering Ivan Mutis, Timo Hartmann, 2018-10-08 This proceedings volume chronicles the papers presented at the 35th CIB W78 2018 Conference IT in Design Construction and Management held in Chicago IL USA in October 2018 The theme of the conference focused on fostering encouraging and promoting research and development in the application of

integrated information technology IT throughout the life cycle of the design construction and occupancy of buildings and related facilities The CIB International Council for Research and Innovation in Building Construction was established in 1953 as an association whose objectives were to stimulate and facilitate international cooperation and information exchange between governmental research institutes in the building and construction sector with an emphasis on those institutes engaged in technical fields of research The conference brought together more than 200 scholars from 40 countries who presented the innovative concepts and methods featured in this collection of papers

Theory Building in Applied Disciplines Richard A. Swanson, Thomas J. Chermack, 2013-08-05 Theory matters in applied disciplines fields that apply scholarly research to professional practice such as management social work health care human resource development education and many others Because these disciplines deal with human beings in the real world a flawed theory can result in actual harm to people and institutions When faced with a professional problem practitioners resort to the latest fad or simply throw everything and anything at it because of the lack of sound theory Scholars deal with problems by slicing them into small segments to study them but fail to address the practical implications What is needed is a way to unite research and practice to create robust theory This is exactly what Richard Swanson and Thomas Chermack offer here a complete five step method for developing sound field tested theory in applied disciplines Unlike many existing methods which cover only the initial conceptualization of a theory the authors offer a complete approach from conceptualizing a theory to creating relevant assessment criteria establishing a research agenda to test the theory's validity applying the theoretical concepts in the real world and using that experience to further refine and improve the theory The method is not restricted to any single discipline nor is it beholden to any research ideology Swanson and Chermack provide a set of tools for each phase of the process making this book accessible and applicable to a wide audience And in addition to examples in each chapter they offer two extended case examples of complete theory building With flawed theories impeding the development of many applied disciplines this book is desperately needed
