Elementary Mathematics from an Advanced Standpoint Felix Klein, 2009-01-01 When the mathematician Felix Klein first went to university he was surprised at just how little what he had learned up to that point was relevant to his new studies Professors had their own interests and these they conveyed without regard for the math students of the future that these prospective secondary schoolteachers would one day instruct Elementary Mathematics from an Advanced Standpoint was written to help remedy that problem Though highly regarded as one of the finest mathematical minds of his day Professor Klein took a great deal of interest in guiding teachers and reducing the gap between the school and the university Readers will come away impressed at the clarity of Klein's writing and the ease with which he conveys complex mathematical ideas Divided into three parts arithmetic algebra and analysis and covering such topics as complex numbers real equations and logarithmic and exponential functions Klein's classic is essential reading for math instructors and students planning to become math instructors German mathematician FELIX KLEIN 1849 1925 a great teacher and scientific thinker significantly advanced the field of mathematical physics and made a number of profound discoveries in the field of geometry His published works include Elementary Mathematics from an Advanced Standpoint Geometry and Famous Problems of Elementary Geometry *The Teaching and Learning of Mathematics at University Level* Derek Holton, 2006-04-11 This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level As such it is one of a number of such studies that ICMI has commissioned The other Study Volumes cover assessment in mathematics education gender equity research in mathematics education the teaching of geometry and history in mathematics education All of these

Study Volumes represent a statement of the state of the art in their respective areas We hope that this is also the case for the current Study Volume The current study on university level mathematics was commissioned for essentially four reasons First universities world wide are accepting a much larger and more diverse group of students than has been the case Consequently universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past As a result the educational and pedagogical issues facing universities have changed Second although university student numbers have increased significantly there has not been a corresponding increase in the number of mathematics majors Hence mathematics departments have to be more aware of their students needs in order to retain the students they have and to attract future students As part of this awareness departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past
