Construire En Acier:

Construire en acier Helmut C. Schultz, Werner Sobek, Karl J. Habermann, 2003-01-01 L'avènement au XIXe siècle du matériau acier a fondamentalement contribué à l'évolution de l'architecture en ouvrant des possibilités jusqu'alors insoupçonnées dans le domaine des portées et des hauteurs de bâtiments. De nos jours la technique de construction incite à réaliser des performances toujours plus remarquables et rechercher de nouvelles formes de bâtiments. Le matériau acier a affranchi la construction de presque toutes les limites. Les auteurs de *Construire en acier* se sont proposés de centrer leur ouvrage autour du thème de l'unité de la conception et de la construction et de présenter clairement les assemblages appropriés à ce type de construction en fonction du matériau, du traitement de la fabrication et du montage de l'ouvrage. Largement illustré, ce livre a l'ambition d'être à la fois un manuel et un traité sur la construction en acier. Il offre aux architectes et aux ingénieurs ainsi qu'aux étudiants une référence précieuse sur leur travail de concepteurs ou de constructeurs.

Concevoir et construire en acier Bertrand Lemoine, Marc Landowski, 2012-02-02 L'acier est un matériau de construction universel, durable et recyclable. Il est présent dans les bâtiments sous de multiples formes et s'adapte aux nécessités pour combiner liberté de création avec efficacité constructive. Il offre des possibilités uniques de grandes portées, de souplesse d'adaptation, de combinaison avec les autres matériaux. Ce manuel présente de manière didactique et synthétique l'essentiel de ce qu'il faut savoir sur l'acier, ses performances mécaniques, sa mise en œuvre dans le domaine des structures des planchers, des façades, des couvertures, des cloisons et des équipements intérieurs. Il souligne également les performances de l'acier en matière de durabilité et de sécurité incendie.

Construire en acier ... Comment? Schweizerische Zentralstelle für Stahlbau (Zürich), Centre Suisse de la Construction Métallique (Zurich), 1988

Conception des charpentes métalliques Manfred A. Hirt, Michel Crisinel, 2005-01-01 La publication de cet ouvrage est dictée par le souci de mettre à la disposition des étudiants en architecture, des architectes, des concepteurs et des constructeurs un document indépendant consacrant uniquement la conception structurale des charpentes métalliques. Dans ce but, il reprend intégralement les chapitres 1 à 6 du volume 11 du *Traité de Génie Civil* paru chez le même éditeur. Les différents critères de conception sont non seulement énoncés et les systèmes porteurs de halles et de bâtiments sont décrits sans avoir recours aux calculs. Les aspects du montage, de la sécurité incendie et de la protection contre la corrosion sont également pris en compte. Cet ouvrage devrait donc faciliter la conception d'une charpente métallique de bâtiment sans qu'il soit nécessaire d'aborder le calcul proprement dit. La conception des charpentes métalliques ne pouvant être enseignée sans une présentation graphique claire et une mise en page attractive, un soin particulier est apporté aux dessins et l'approche pédagogique est privilégiée. Dans cette nouvelle édition, le chapitre consacré aux principes de dimensionnement a été complètement remanié sur la base des nouvelles normes suisses et européennes de structures porteuses.
