Congress,2009 *Energy Abstracts for Policy Analysis* ,1988 **Understanding the Human Factor of the Energy Transition: Mechanisms Underlying Energy-Relevant Decisions and Behaviors** Tobias Brosch,David Sander,Martin K. Patel,2016-06-27 An increasing number of countries are shifting toward sustainable energy economies emphasizing the use of renewable energy sources increases in energy efficiency and the abatement of greenhouse gas emissions The success of such an energy transition will depend not only on the development of new energy technologies but also on major changes in the patterns of individual energy related decisions and behaviors resulting in substantial reductions in energy demand Consequently the behavioral sciences can make important contributions to the energy transition by increasing our understanding of the multiple factors and mechanisms that underlie individual as well as group based decisions and behaviors in the energy domain and by creating a basis for systematic interventions that reduce energy usage Many different types of relevant behaviors and decisions need to be considered in this context including decisions to invest in energy efficient household equipment adjustments of energy critical habits related to heating eating or mode of transportation and participation in the political discourse related to questions of energy An integration of the expertise of the different disciplines of the behavioral sciences is thus needed to comprehensively investigate the impact of the different drivers and barriers that may determine energy related decisions and behaviors including economic factors such as price level social factors such as norms communication patterns and social learning processes and individual factors such as values attitudes beliefs heuristics affective biases and emotions The potential impact of these factors on the success of the energy transition is considerable for example a recent projection of the energy demand in Switzerland until 2050 has estimated the reduction potential related to psychological and sociological factors between 0% and 30% depending on which behavioral changes will be implemented in society Increased research efforts from the behavioral sciences are required to ensure that the full reduction potential can be achieved This Research Topic brings together contributions from different disciplines such as psychology affective science behavioral economics economics sociology consumer behavior business science sociology and political science that improve our understanding of the many factors underlying decision making and behavior in the energy domain and contribute to the development of targeted interventions that aim at reducing energy demand based on these factors Routledge Handbook of Consumer Protection and Behaviour in Energy Markets Tina Soliman Hunter,Marcin Kraśniewski,Jurgita Malinauskaite,Marzena Czarnecka,2024-09-27 The Routledge Handbook of Consumer Protection and Behaviour in Energy Markets provides a comprehensive study of consumer protection and consumer behaviour in selected jurisdictions worldwide Each chapter is written by experts and provides a contemporary overview of national consumer protection and policy developments in the energy sector Today energy has become an essential factor in ensuring the socio economic development of any country and

improving the quality of life of society and is now an essential element of life for everyone The energy market has become a competitive market based on the assumption that generation and sale of energy is not a natural monopoly and that market mechanisms in particular competition between energy companies are the best way to reduce prices and improve customer service The purchase of energy is inextricably linked with its distribution from the producer to the purchaser The book shows that well functioning energy markets need informed and well protected consumers who can benefit from competition and transparent offers They are free to choose the most competitive providers and know their rights with access to effective means of redress Given that the energy market has a specific technical nature the book analyses the energy market within the scope of free market principles with a focus on the protection of the weaker party to the contract the consumer In addition consumers can also play an active part of the clean energy transition Journal of the House of Representatives of the United States United States.
