Vale, Robert Vale, 2022-12-29 The Environmental Impact of Cities assesses the environmental impact that comes from cities and their inhabitants demonstrating that our current political and economic systems are not environmentally sustainable because they are designed for endless growth in a system which is finite It is already well documented that political economic and social forces are capable of shaping cities and their expansion retraction gentrification re population industrialisation or de industrialisation However the links between these political and economic forces and the environmental impact they have on urban areas have yet to be numerically presented As a result it is not clear how our cities are affecting the environment meaning it is currently impossible to relate their economic political and social systems to their environmental performance This book examines a broad selection of cities covering a wide range of political systems geography cultural backgrounds and population size The environmental impact of the selected cities is calculated using both ecological footprint and carbon emissions two of the most extensively available indices for measuring environmental impact The results are then considered
