LeBoit, 2012-12-06 The interpretation of melanocytic tumors represents one of the most important topics and probably the most difficult challenge in the field of dermatopathology For example the evaluation of the so called nevoid spitzoid melanoma Spitz's nevi with conflicting criteria or some benign simulators of malignant melanoma can pose seemingly insurmountable diagnostic problems A correct diagnosis is expected because the implications are serious The misreading of a section of a malignant melanoma as a nevus which will then be left untreated may result in regrowth at the biopsy site may metastasize and lead to death Whereas overdiagnosis of Spitz's nevus may be followed by unnecessarily extensive surgery including lymph node dissection and sometimes immunotherapy and chemotherapy also Melanocytic tumors are identified by clinical and histological criteria with the later based on both architectural and cytomorphological features A clear comprehensive book on this subject can be of help to dermatopathologists general pathologists and dermatologists Philip

LeBoit and Guido Massi are particularly suited to deal with this task because of their great experience They have produced an impressive work that will be respected as a major teaching guide and diagnostic aid for melanoma and benign melanocytic lesions

Advanced Skin Cancer Debjani Sahni,Adam Lerner,2022-04-28 Advanced skin cancer is one that has already metastasized beyond its primary origin or one that has invaded underlying tissues such that surgical resection either is technically impossible or would lead to an unacceptable functional or cosmetic outcome These skin cancers present a complex problem that requires the input of multiple specialties to delineate the best management plan National guidelines utilize the best available data to guide management decisions However there is considerable leeway within the guidelines enabling the ultimate care decision to be molded to best fit each individual patient This book aims to provide instructional examples of patient cases where the input of the multidisciplinary team is critical in providing the most suitable care plan for the patient
