Competitiveness United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Technology and Competitiveness,1992 **Community Colleges as Incubators of Innovation** Rebecca A. Corbin,Ron Thomas,2023-07-03 While community colleges have traditionally focused on providing students with opportunities to gain credentials for employment the increasingly important question is Are they preparing students for the looming dynamic disruptive and entrepreneurial environments ahead This book addresses the urgent need for community colleges to prioritize entrepreneurship education both to remain relevant in a changing economy and to give graduate students the flexible and interdisciplinary mindsets needed for the future of society It argues that entrepreneurial education should be offered broadly to a wide range of students and across all disciplines defines the key constructs for achieving this objective and describes how to create entrepreneurial learning environments The expert contributors with the support of the National Association for Community College Entrepreneurship NACCE start from the premise that community colleges are uniquely positioned to lead entrepreneurial initiatives through both internally generated curriculum design and through collaboration with the local entrepreneurial community to build bridges between the classroom to the community which in turn can offer models of implementation and constitute a network or support system for students Community colleges can become incubators of innovation a magnet for talent and provide the impetus for development strategies that their communities have not begun to realize As the chapters make clear developing an entrepreneurial program itself requires an entrepreneurial mindset that

transcends any lack of resources requiring a spirit of imagination and resourcefulness This book takes the reader on a journey through the steps needed to build a meaningful relevant and sustainable entrepreneurship program covering program development curriculum design appropriate pedagogical approaches and community engagement American Hometown Renewal Gary Mattson, 2016-09-13 Before the interstates Main Street America was the small town s commercial spine and served as the linchpin for community social solidarity Yet during the past three decades a series of economic downturns has left many of the great small cities barely viable American Hometown Renewal is the first book to combine administrative budgetary and economic analysis to examine the economic and fiscal plight currently facing America s small towns Featuring a blend of theory applications and case studies it provides a comprehensive single source textbook covering the key issues facing small town officials in today s uncertain economy Written by a former public manager university professor and consultant to numerous small towns in the Heartland this book demonstrates the ways in which contemporary small towns throughout the nation are facing economic challenges brought about by the financial shocks that began in 2008 Each chapter explores a theme related to small town revival and provides a related tool or technique to enable small town officials to meet the challenges of the 21st Century Encouraging local small town officials to look at the economic orbit of communities in a similar manner as a town s budget or a family s personal wealth examining its specific competitive advantages in terms of relative assets to those of competing communities this book provides the reader with step by step instructions on how to conduct an asset inventory and apply key asset tools to devise a strategy for overcoming the challenges and constraints imposed upon spatially fixed communities American Hometown Renewal is an essential primer for students studying city management economic community development and city planning and will be a trusted handbook for city managers geographers city planners urban or rural sociologists political scientists and regional microeconomists

STEM Models of Success J. Luke Wood, Robert T. Palmer, 2014-03-01 As the U S focuses on positioning itself to retain and advance its status as a world leader in technology and scientific innovation a recognition that community colleges are a critical site for intervention has become apparent Community colleges serve the lion s share of the nation s postsecondary students In fact 40% of all undergraduate students are enrolled in community colleges these students account for nearly 30% of all STEM undergraduate majors in postsecondary institutions These students serve as a core element of the STEM pipeline into four year colleges and universities via the community college transfer function Moreover community colleges are the primary postsecondary access point for non traditional students including students of color first generation low income and adult students This is a particularly salient point given that these populations are sordidly underrepresented among STEM graduates and in the STEM workforce Increasing success among these populations can contribute significantly to advancing the nation s interests in STEM As such the community college is situated as an important site for innovative practices that have strong implications for bolstering the nation s production and sustenance of a STEM labor force In recognition of this

role the National Science Foundation and private funding agencies have invested millions of dollars into research and programs designed to bolster the STEM pipeline From this funding and other independently sponsored inquiry promising programs initiatives and research recommendations have been identified These efforts hold great promise for change with the potential to transform the education and outcome of STEM students at all levels This important book discusses many of these promising programs initiatives and research based recommendations that can impact the success of STEM students in the community college This compilation is timely on the national landscape as the federal government has placed increasing importance on improving STEM degree production as a strategy for America s future stability in an increasingly competitive global marketplace Informed by research and theory each chapter in this volume blazes new territory in articulating how community colleges can advance outcomes for students in STEM particularly those from historically underrepresented and underserved communities
