Principles of Modern Radar Jerry Eaves,Edward Reedy,2012-12-06 This book Principles of Modern Radar has as its genesis a Georgia Tech short course of the same title This short course has been presented annually at Georgia Tech since 1969 and a very comprehensive set of course notes has evolved during that seventeen year period The 1986 edition of these notes ran to 22 chapters and all of the authors involved except Mr Barrett were full time members of the Georgia Tech research faculty After considerable encouragement from various persons at the university and within the radar community we undertook the task of editing the course notes for formal publication The contents of the book that ensued tend to be practical in nature since each contributing author is a practicing engineer or scientist and each was selected to write on a topic embraced by his area s of expertise Prime examples are Chaps 2 5 and 10 which were authored by E F Knott G W Ewell and N C Currie respectively Each of these three researchers is recognized in the radar community as an expert in the technical area that his chapter addresses and each had already authored and published a major book on his subject Several other contributing authors including Dr Bodnar Mr Bruder Mr Corriher Dr Reedy Dr Trebits and Mr Scheer also have major book publications to their credit

Principles of Integrated Maritime Surveillance Systems A. Nejat Ince,Ercan Topuz,Erdal Panayirci,Cevdet Isik,2012-12-06 Information is always required by organizations of coastal states about the

movements identities and intentions of vessels sailing in the waters of interest to them which may be coastal waters straits inland waterways rivers lakes or open seas This interest may stem from defense requirements or from needs for the protection of off shore resources enhanced search and rescue services deterrence of smuggling drug trafficking and other illegal activities and or for providing vessel traffic services for safe and efficient navigation and protection of the environment To meet these needs it is necessary to have a well designed maritime surveillance and control system capable of tracking ships and providing other types of information required by a variety of user groups ranging from port authorities shipping companies marine exchanges to governments and the military Principles of Integrated Maritime Surveillance Systems will be of vital interest to anyone responsible for the design implementation or provision of a well designed maritime surveillance and control system capable of tracking ships and providing navigational and other types of information required for safe navigation and efficient commercial operation Principles of Integrated Maritime Surveillance Systems is therefore essential to a variety of user groups ranging from port authorities to shipping companies and marine exchanges as well as civil governments and the military

Diagnostics for Experimental Thermonuclear Fusion Reactors Giuseppe Gorini, Elio Sindoni, Peter E. Stott, 2012-12-06 This book of proceedings collects the papers presented at the Workshop on Diagnostics for ITER held at Villa Monastero Varenna Italy from August 28 to September 1 1995 The Workshop was organised by the International School of Plasma Physics Piero Caldirola Established in 1971 the ISPP has organised over fifty advanced courses and workshops on topics mainly related to plasma physics In particular courses and workshops on plasma diagnostics previously held in 1975 1978 1982 1986 and 1991 can be considered milestones in the history of this institution Looking back at the proceedings of

the previous meetings in Varenna one can appreciate the rapid progress in the field of plasma diagnostics over the past 20 years The 1995 workshop was co organised by the Istituto di Fisica del Plasma of the National Research Council CNR In contrast to previous Varenna meetings on diagnostics which have covered diagnostics in present day tokamaks and which have had a substantial tutorial component the 1995 workshop concentrated specifically on the problems and challenges of ITER diagnostics ITER the International Thermonuclear Experimental Reactor a joint venture of Europe Japan Russia and the United States presently under design will need to measure a wide range of plasma parameters in order to reach and sustain high levels of fusion power A list of the measurement requirements together with the parameter ranges target measurement resolutions and accuracies provides the starting point for selecting a list of candidate diagnostic systems Review ,1978
