Medical Image Computing and Computer-Assisted Intervention - MICCAI 2003 Randy E. Ellis, Terry M. Peters, 2003-10-29 The 6th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI2003 was held in Montr eal Qu ebec

Canada at the Fairmont Queen Elizabeth Hotel during November 15-18, 2003. This was the first time the conference had been held in Canada. The proposal to host MICCAI 2003 originated from discussions within the Ontario Consortium for Image-Guided Therapy and Surgery, a multi-institutional research consortium that was supported by the Government of Ontario through the Ontario Ministry of Economic Development and Innovation. The objective of the conference was to offer clinicians and scientists a forum within which to exchange ideas in this exciting and rapidly growing field. MICCAI 2003 encompassed the state of the art in computer-assisted interventions, medical robotics, and medical image processing, attracting experts from numerous multidisciplinary professions that included clinicians and surgeons, computer scientists, medical physicists, and mechanical, electrical, and biomedical engineers. The quality and quantity of submitted papers were most impressive. For MICCAI 2003, we received a record 499 full submissions and 100 short communications. All full submissions of 8 pages each were reviewed by up to 5 reviewers, and the 2-page contributions were assessed by a small subcommittee of the Scientific Review Committee. All reviews were then considered by the MICCAI 2003 Program Committee, resulting in the acceptance of 206 full papers and 25 short communications. The normal mode of presentation at MICCAI 2003 was as a poster; in addition, 49 papers were chosen for oral presentation.

E-Learning as a Socio-Cultural System: A Multidimensional Analysis Zuzzevičiūtė, Vaiva, Butrimė, Edita, Vitkutė-Adžgauskienė, Daiva, Vladimirovich Fomin, Vladislav, Kikis-Papadakis, Kathy, 2014-06-30. Medicine Meets Virtual Reality 13 James D. Westwood, 2005. Magical describes conditions that are outside our understanding of cause and effect. Even in modern societies, magic-based explanations are powerful because given the complexity of the universe, there are so many opportunities to use them. The history of medicine is defined by progress in understanding the human body from magical explanations to measurable results. To continue medical progress, physicians and scientists must openly question traditional models. For thirteen years, MMVR has been an incubator for technologies that create new medical understanding via the simulation, visualization, and extension of reality. Researchers create imaginary patients because they offer a more reliable and controllable experience to the novice surgeon. With imaging tools, reality is purposefully distorted to reveal to the clinician what the eye alone cannot see. Robotics

and intelligence networks allow the healer's sight hearing touch and judgment to be extended across distance as if by magic. The moments when scientific truth is suddenly revealed after lengthy observation experimentation and measurement is the real magic. These moments are not miraculous however.

The Transparent Body Jose Van Dijck, 2011-05-01

From the potent properties of X rays evoked in Thomas Mann's *Magic Mountain* to the miniaturized surgical team of the classic science fiction film *Fantastic Voyage* the possibility of peering into the inner reaches of the body has engaged the twentieth century popular and scientific imagination. Drawing on examples that are international in scope *The Transparent Body* examines the dissemination of medical images to a popular audience advancing the argument that medical imaging technologies are the material embodiment of collective desires and fantasies the most pervasive of which is the ideal of transparency itself. *The Transparent Body* traces the cultural context and wider social impact of such medical imaging practices as X ray and endoscopy ultrasound imaging of fetuses the filming and broadcasting of surgical operations the creation of plastinated corpses for display as art objects and the use of digitized cadavers in anatomical study. In the early twenty first century the interior of the body has become a pervasive cultural presence as accessible to the public eye as to the physician's gaze. Jose van Dijck explores the multifaceted interactions between medical images and cultural ideologies that have brought about this situation. *The Transparent Body* unfolds the complexities involved in medical images and their making illuminating their uses and meanings both within and outside of medicine. Van Dijck demonstrates the ways in which the ability to render the inner regions of the human body visible and the proliferation of images of the body's interior in popular media affect our view of corporeality and our understanding of health and disease. Written in an engaging style that brings thought provoking cultural intersections vividly to life *The Transparent Body* will be of special interest to those in media studies cultural studies science and technology studies medical humanities and the history of medicine.
