Abstract

The dynamics of cyclic feedback systems are described. The emphasis is both in showing the diversity of possible dynamics in these systems and in showing that there is a underlying dynamic structure possessed by all these systems. In particular, for the special class of monotone cyclic feedback systems, the dynamics is fairly simple; the recurrent sets can only consist of fixed points or periodic orbits and in many cases can be shown to be Morse-Smale. This is contrasted with the general cyclic feedback systems for which chaotic dynamics can occur.

The general properties which large subclasses of these systems have in common include periodic orbits and a semi-conjugacy onto a simple,

Cyclic Feedback Systems:

Cyclic Feedback Systems Tomáš Gedeon, 1998 Explores the global dynamics of a class of ordinary differential equations called cyclic feedback systems The global dynamics is described by a Morse decomposition of the global attractor defined with the help of a discrete Lyapunov function A three dimensional system of ODEs with two linear equations is constructed such that the invariant set is at least as complicated as a suspension of a full shift on two symbols No index Annotation copyrighted by Book News Inc Portland OR

The Control Handbook (three volume set) William S. Levine, 2018-10-08 At publication The Control Handbook immediately became the definitive resource that engineers working with modern control systems required Among its many accolades that first edition was cited by the AAP as the Best Engineering Handbook of 1996 Now 15 years later William Levine has once again compiled the most comprehensive and authoritative resource on control engineering He has fully reorganized the text to reflect the technical advances achieved since the last edition and has expanded its contents to include the multidisciplinary perspective that is making control engineering a critical component in so many fields Now expanded from one to three volumes The Control Handbook Second Edition brilliantly organizes cutting edge contributions from more than 200 leading experts representing every corner of the globe They cover everything from basic closed loop systems to multi agent adaptive systems and from the control of electric motors to the control of complex networks Progressively organized the three volume set includes Control System Fundamentals Control System Applications Control System Advanced Methods Any practicing engineer student or researcher working in fields as diverse as electronics aeronautics or biomedicine will find this handbook to be a time saving resource filled with invaluable formulas models methods and innovative thinking In fact any physicist biologist mathematician or researcher in any number of fields developing or improving products and systems will find the answers and ideas they need As with the first edition the new edition not only stands as a record of accomplishment in control engineering but provides researchers with the means to make further advances

Handbook of Dynamical Systems B. Fiedler, 2002-02-21 This handbook is volume II in a series collecting mathematical state of the art surveys in the field of dynamical systems Much of this field has developed from interactions with other areas of science and this volume shows how concepts of dynamical systems further the understanding of mathematical issues that arise in applications Although modeling issues are addressed the central theme is the mathematically rigorous investigation of the resulting differential equations and their dynamic behavior However the authors and editors have made an effort to ensure readability on a non technical level for mathematicians from other fields and for other scientists and engineers The eighteen surveys collected here do not aspire to encyclopedic completeness but present selected paradigms The surveys are grouped into those emphasizing finite dimensional methods numerics topological methods and partial differential equations Application areas include the dynamics of neural networks fluid flows nonlinear optics and many others While the survey articles can be read independently they deeply share recurrent themes from dynamical systems Attractors bifurcations center manifolds dimension reduction

ergodicity homoclinicity hyperbolicity invariant and inertial manifolds normal forms recurrence shift dynamics stability to name just a few are ubiquitous dynamical concepts throughout the articles **Probabilistic Spiking Neuronal Nets**

Antonio Galves, Eva Löcherbach, Christophe Pouzat, 2024-10-16 This book provides a self contained introduction to a new class of stochastic models for systems of spiking neurons These systems have a large number of interacting components each one evolving as a stochastic process with a memory of variable length Several mathematical tools are put to use such as Markov chains stochastic chains having memory of variable length point processes having stochastic intensity Hawkes processes random graphs mean field limits perfect sampling algorithms the Context algorithm and statistical model selection The book's focus on mathematically tractable objects distinguishes it from other texts on theoretical neuroscience The biological complexity of neurons is not ignored but reduced to some of its main features such as the intrinsic randomness of neuronal dynamics This reduction in complexity aims at explaining and reproducing statistical regularities and collective phenomena that are observed in experimental data an approach that leads to mathematically rigorous results With an emphasis on a constructive and algorithmic point of view this book is directed towards mathematicians interested in learning about stochastic network models and their neurobiological underpinning and neuroscientists interested in learning how to build and prove results with mathematical models that relate to actual experimental settings **Dynamics and Control of Process Systems 2004**

Modern Ecopoetry, 2020-12-29 Modern Ecopoetry Reading the Palimpsest of the More Than Human World interrogates how humans relation to and confrontation with the nonhuman world is captured in or through poetry It brings together contributions that explore how modern poetry addresses human beings relationship with the natural world mirroring some of the most salient ecopoetic approaches to date This collection is written from very different corners of the globe and significantly adds to the existing body of work because on the one hand it continues to focus on the greening of poetry and on the other it expands its critical implementation in poets not necessarily included in mainstream literary canons by setting them side by side regardless of their cultural background Contributors Aamir Aziz Cristina M Gomez Fernandez Stephen Hock Matilde Mart n Gonzalez Leonor Mar a Mart nez Serrano Mar a Antonia Mezquita Fernandez Esther Sanchez Pardo Catherine Woodward Heather H Yeung Rabia Zaheer **Mathematics in Population Biology** Horst R. Modeling Biomolecular Networks in Cells Luonan Chen, Ruiqi Wang, Chunguang Li, Kazuyuki Aihara, 2010-07-05 Modeling Biomolecular Networks in Cells shows how the interaction between the molecular components of basic living organisms can be modelled mathematically and the models used to create artificial biological entities within cells Such forward engineering is a difficult task but the nonlinear dynamical methods espoused in this book simplify the biology so that it can be successfully understood and the synthesis of simple biological oscillators and rhythm generators made feasible Such simple units can then be co ordinated using intercellular signal biomolecules The formation of such man made multicellular networks with a view to the production of biosensors logic gates new forms of integrated circuitry based on gene chips and even biological computers is an important step in the design of faster and more flexible electronics The

book also provides theoretical frameworks and tools with which to analyze the nonlinear dynamical phenomena which arise from the connection of building units in a biomolecular network *Biotic Feedbacks in the Global Climatic System* G. M. Woodwell, Fred T. Mackenzie, 1995 The problem of global warming is among the most intensely studied and debated topics in ecology and environmental science But one possible contributor to global warming biotic feedback has until now not been addressed with any serious sustained attention Featuring papers prepared for a meeting held at Woods Hole to explore the topic this book provides for the first time a comprehensive overview of the many issues associated with interactions between biota and global warming With contributions from internationally respected scholars in the field the book will prove invaluable to students and researchers in ecology climatology and environmental science Circular Economy for Buildings and Infrastructure Jian Zuo, Liyin Shen, Ruidong Chang, 2024-05-03 This edited volume covers theoretical and practical aspects of circular economy in building development offering chapters dealing with topics such as material design affordability of housing development waste management and recycling smart metering and more A particular focus is placed on various stakeholders points of view The book's chapters are co developed and contributed by multidisciplinary teams including both academics and industry practitioners The case study oriented approach taken here helps to facilitate the reader's understanding of how building sustainability can be achieved in the context of circular economy The building industry has significant environmental social and economic impacts As one of the biggest energy consumers and carbon emitters building sustainability has attracted wide attention globally Building projects and their associated activities consume a large amount of energy natural resources and water while producing a large proportion of wastes throughout their lifecycles The traditional linear approach of make use and dispose has been heavily criticized whilst the circular approach has gained momentum Indeed circular economy has emerged as one of key principles to manage sustainability related issues by means of focusing on the circularity of resources as well as the cost implications
