and relevant to practicing engineers new chapters on systems low profile elements and base station antennas organizational changes to improve understanding more details to selected important topics such as microstrip antennas and arrays and expanded measurements topic

Substrate Integrated Suspended Line Antenna and Arrays Kaixue Ma, Ningning Yan, Yu Luo, 2023-11-21 This book delves deeply into the substrate integrated suspended line antenna technologies and evaluates its potential to replace conventional three dimensional 3D metal based antennas Over the years studies on substrate integrated suspended line antennas have captivated engineers and scientists from the antennas and related engineering fields all aiming to achieve low cost and low loss characteristics The book establishes a fundamental framework for this topic while emphasizing the importance of substrate integrated suspended line antennas in the wireless communication and radar systems It is designed for undergraduate and graduate students who are interested in antenna technology researchers investigating substrate integrated technology and antenna engineers working on low cost and low loss antennas and arrays

Study of Circular Arrays of Radial and Tangential Dipoles C. H. Holmes, 1967 The circular arrays investigated consist of N identical center fed cylindrical dipoles which lie in the plane of a circle and whose centers are equally spaced around the circumference of the circle In the case designated tangential arrays the elements are placed tangential to the circle and in the case designated radial arrays they are placed radial to the circle This study first presents the derivation of the integral equations defining the vector potential over the surfaces of the elements These equations are reduced to a single integral equation by using sequence terminal voltages The Gaussian quadrature formula for numerical integration is used to solve the equation for each sequence Methods of obtaining the sequence terminal admittances are also described Experimental results are compared with theory for a driven monopole in a tangential array positioned on a ground plane Radiation patterns determined from the numerical currents are compared with those obtained from assumed sinusoidal currents Author

VHF and UHF Antennas R. A. Burberry, 1992 Describes the VHF and UHF antennas for the 30 3000 Mhz range that have been developed over the past 50 years including many designs that have not previously been treated in detail and several new uses for old designs Among the topics are methods of predicting and measuring the performance of antennas and how it is affected by the local environment both normal and adverse and by the structures on which the antennas are mounted both fixed and mobile including humans Addressed primarily to practicing antenna engineers the basic theory is assumed to be known except for the less known types Distributed by INSPEC Annotation copyright by Book News Inc Portland OR

Microwaves, Millimeter Wave and Terahertz Liquid Crystals Anyong Qing, Yizhe Zhao, Zhiyong Zhang, 2024-03-05. This book is the first ever monograph on nematic liquid crystals for microwaves, millimeter waves, and terahertz waves. It presents the first-hand independent studies on nematic liquid crystals for microwaves, millimeter waves, and terahertz waves. This book opens with an introduction to generic liquid crystals and a retrospective review about nematic liquid crystals in microwaves, millimeter waves, and terahertz waves. Attention is then focused on the latest in-house progress on microwave, millimeter wave, and terahertz nematic liquid crystals. Synthesis and characterization of novel nematic liquid crystals are first presented, followed by indigenous technologies to manufacture functional nematic liquid crystal devices for microwaves, millimeter waves, and terahertz waves. A few self-developed representative advanced functional devices are shown to demonstrate the promising perspective of liquid crystals for not only microwaves, millimeter waves, and terahertz waves but also many other non-display applications. The presented studies will attract scientists, engineers, and students from various disciplines such as materials, chemical, electrical, biological, and biomedical engineering. The book is intended for undergraduates, graduates, researchers, professionals, and industrial practitioners who are interested in developing novel liquid crystals and further extending liquid crystals beyond display.
