The Evolution of Differentiation William S. Bullough, 2013-10-22 The Evolution of Differentiation attempts to sketch the outlines of a framework from what is now known or suspected of the various aspects of differentiation in all types of organisms This book surveys the many aspects of differentiation that are seen today and in particular because of the evident universality of expression of the genetic code to enquire whether any similar universality exists in the methods of gene repression and activation The information reviewed ranges from the chemical control of the genetic mechanisms of unicellular organisms during their various phases of activity to the chemical control of differentiation in multicellular organisms both during embryonic development and in the adult state Finally some consideration is also given to that collapse of differentiation which leads to cancer

Cellular Mechanism for Calcium Transfer and Homeostasis George Jr. Nichols, 2012-12-02 Cellular Mechanisms for Calcium Transfer and Homeostasis presents the proceedings of the Workshop Conference on Cell Mechanisms for Calcium Transfer and Homeostasis held at Portsmouth New Hampshire on September 13 16 1970 This book examines the ubiquity of the involvement of calcium in the function and structure of biological systems Comprised of seven parts encompassing 26 chapters this book starts with the ramifications of calcium and its various roles in the body TMs economy This text then discusses how calcium is absorbed by an active cation oriented transport process Other chapters explore the fundamental roles of calcium as a component of bone mineral as well as in the control of cell replication and growth This text also examines the structural organization of the nerve cell membrane The final chapter presents data on
