Cytogenetics Of Mammalian Embryonic Development:

Cytogenetics of Mammalian Embryonic Development Andreï Pavlovich Dyban,V. S. Baranov,1987 Chromosome anomalies are a major cause of embryonic mortality as well as of mental and physical defects but until very recently it has been almost impossible to understand the underlying causal mechanisms linking chromosomes and development In this book two eminent biomedical scientists explain how laboratory experiments with mice are finally revealing the molecular basis of gene expression in early development Comprehensive and up to date Dyban and Baranov's work is the first attempt to review the whole field by bringing together the important research being done in the United States the Soviet Union Britain and Germany Gametes - The Oocyte Jurgis Gediminas Grudzinskas,J. L. Yovich,1995-07-28 This volume and its companion volume on the spermatozoon provide an authoritative and wide ranging account of the gametes and their reproductive role and function in humans Acknowledged authorities from around the world contribute a detailed and timely account of the oocyte The volume starts with an evolutionary perspective before focusing on the molecular and cellular biology of the oocyte and its structure and function The development and maturation of the oocyte is fully dealt with to include the endocrine and paracrine regulation of ovarian function Practical issues such as oocyte storage and ovarian stimulation are also fully covered The causes of female infertility are also an important theme The volume concludes with a thought provoking chapter on ethical considerations The volume will be an essential source of information for all clinicians and scientists with an interest in human reproduction **Growth Factors in Mammalian Development** I. Y. Rosenblum,Susan Heyner,2021-05-30 The purpose of this volume is to review and discuss key growth factor systems that have been implicated in embryogenesis Emphasis is placed on the insulin family of peptides including insulin and the structurally and functionally related insulin like growth factors The initial chapters provide a review of basic topics including developmental genetics energy metabolism and hormonal signaling mechanisms which are important prerequisites to the central theme that follows The book concludes with a brief review of oncogene expression in early development this new field has contributed significantly to our understanding of how mitogenic signals activate genetic elements responsible for embryonic growth and development This book presents information important to cell biologists endocrinologists biological chemists and developmental biologists
